>Since language inherently includes Spelling, and Grammar.

Language does not inherently include Spelling, though grammar is an
inherent part of language. Many languages include no written form,
and some that do, such as Chinese, use pictographic representations
of words and/or ideas rather than the alphabetic spellings that are
used with most European languages. And you can't make a case that
Morse has a grammar separate from the natural language alphabetic
spellings that it encodes.

>There are perforce a number of Morse dialects in the English Speaking World.
>Further, since grammar is a function of the Native Language, Japanese,
>Chinese, French, German, Dutch, etc. have a different sense of Grammar.
>Therefore Morse is not a Universal Language, but rather a Family of semi
>transportable languages.

Morse, like ASCII, is merely an alphabetic encoding that can be *used*
to convey information in a natural language that has alphabetic spelling
in it's written form. It's not a language itself since it has no words or
grammatical structure of it's own.

>
>This is because of the wide bandwidth of FM transmissions (I believe). Because
>FM transmissions take up so much bandwidth, the transmissions can be heard
>slightly off-frequency.

Well there's a little more than that going on since he said he received
signals *better* when tuned off frequency. One plausible explanation that's
linked to the bandwidth of FM transmissions for what you're experiencing
could be that the signals you are monitoring are *wider* than the amateur
normal 5 kHz deviation. In that case, the narrow bandwidth (relatively)
of your receiver won't detect them properly. By tuning off, you can slope
detect one sideband of the signal and receive it clearer. This effect is
very evident if you try to listen to an FM broadcast channel with a NBFM
receiver. Some repeater operators mistakenly overdeviate their transmitters
following the "all knobs to the right" philosophy. It doesn't work well
with narrow receivers. This overdeviation is a chronic problem on packet
where the higher frequency components of the signal carry the information.

Source record: 273697

The local repeater just had the pl code turned on. My OLD kenwood
tr2600 can't handle the sophistication. Does anyone have any info
on how I can modify this radio to handle pl encode and decode? I
guess the other alternative is to buy another radio......
On another matter, does anyone have a mike (or a clone) for this radio?
Thanks

>on the air). Question: How could I do MCW with it? I'd prefer to use
>something which would key the transmitter semi-QSK-wise when I hit the code
>key--know what I mean?

Some keyers used to have this feature built in. An old TO style keyer
I had used a separate PTT line that was activated prior to the first
character. You can duplicate this by diode ORing the paddle contacts and
feeding that trigger to a 555 used as a retriggerable one shot. You
can adjust the delay from after the last paddle closure to PTT release
to suit your sending style. If you're using a straight key, you can
use a dual 555 package and make the second part the audio oscillator
for your MCW.

Since the HTX-202 uses the leaky mike PTT technique, the first 555
section would pull down a 3 kohm resistor hooked to mic in, and the
second stage would capacitor couple the tone to the same point. You
can slap this together on one of the Radio Shack proto boards in a
few minutes.

From: bsplaine@sr.hp.com
Message-ID: <CHB970.23o@srgenprp.sr.hp.com>
Source record: 273698

I have a friend whose newly aquired TS440 is hanging up on xmit.... or so the transmit LED indicates...

The xcvr does not return to rcv. but he can not hear a side tone w/LED on. It all resets back to normal when he powers down and back on again. But the same problem reoccurs.

I had this happen to me once or twice while operating and had to do the same thing (I also have a TS440) but the problem seemed to disappear. I never had a chance to troubleshoot because it never returned.

Is it likely that it might have something to do with hanging relay or with RF getting into something through a cord??? I didn't ask him how well his shack is grounded, but he has not had any problems with his TenTec Century.....

I put a note out on packet and received two suggestions... one was stray RF and the other was thermal.... BTW, his shack is out in a cold garage... but that doesn't explain MY problem as mine is in the comfort of the family room and my shack is very well grounded from the standpoint of RF.

Thanks in advance for any suggestions..... Bill

>There is no need for wizz-bang horsepower, just to print little characters
>to the screen.

Indeed, an even cheaper approach is to use a dumb terminal or ASR33
to work with the *Terminal* Node Controller since you don't have to
tie up a TV set too, if all you need is to print little characters
on a screen or paper. Of course if you want to take advantage of
the more general features of packet, such as file and Email transfer,
and if you want to take advantage of higher speeds, you'll dump the
Terminal Node Controller and the clunky old display technology and
adapt a DMA digital interface card in a more modern bus oriented
computer running some competent networking software.

>In fact it was innovation by some programmers in Germany

>Bells and Whistles " Ham Radio can be expensive. If you want what works, and
>are willing to expend some effort and/or elbow grease, Ham Radio can be
>quite reasonable, while still being innovative.

Baycom is a neat hack, though I wouldn't call it high tech, and it doesn't
require a C64, IBM compatables work too. But it is a low speed solution
oriented to squelched FM radios, and one that excessively ties up your
computing resources counting zero crossings. It's satisfactory for the
trivial terminal to terminal chat function on an otherwise unused computer,
but that's a small part of what packet is capable of doing.

It boogles my mind that people would oppose the 'instant' license proposal. This mechanisim exists in the marine band, and perhaps others. I can think of only two reasons this proposal is frowned on:

1. I had to sit around six long weeks waiting for my license, and by golly, you are going to wait too.

2. That is what they use to do in CB, and by golly, we are better than CB.

I personally can not see one reason for not adopting the proposal. Currently we allow instant access to new privileges on upgrading, why not access to the privileges when first obtaining a license?

In a sense, this is what it all really comes down to.

But it turns out that the Communications Act of 1934 authorizes *anyone*, not just hams, to use any radio at their disposal in an emergency involving possible loss of life if normal means of communication are unavailable. However, you'll have to expect to prove that you had no realistic choice to a skeptical court (as well as to a Sherriff's department that would probably really like to keep the equipment they took even if they know darned well that they aren't entitled to it...).

>"K5ZC mobile 5"; yes, I've been around that long.) "Hey, Jay...what's up?
>WD5IYT." And so on.

That's the way I usually do it too. We sometimes razz people for saying "monitoring" on our machine because they're unlikely to be listening while they're talking. :-) But that's just in fun, I've caught myself doing it too. What we *really* don't like is use of Q signals, CQ, or other expressions that aren't plain language procedures. We urge users to talk like normal human beings when using the machine rather than using HF jargon. We also don't like excessive IDing at every turnover, or attempts at strict roundtable procedures. We don't try to run people off who do these things, but they will very likely catch some good natured heckling from the peanut gallery.

On the other hand, there are other repeater groups in town who attempt to enforce use of particular words and procedures very strictly. One of them hosts ARES. Now I guess there's nothing wrong with trying to emulate police or military comm methods, and use of strict procedures can be helpful in emergency net situations, but our group doesn't find it very friendly or natural for day to day conversation.

4797. Yaesu FT-11/R mini-HT: a first look

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-30 16:41:25 UTC
From: M14494@mwvm.mitre.org
Message-ID: <16C96A467.M14494@mwvm.mitre.org>
Source record: 273728

I just got one of the first FT-11/R mini-HTs from Yaesu, and
I thought folks might be interested in some first impressions:
Wonderful! Terriffic! Fantastic! Hock your banjo and buy one!
The FT-11 is tiny, about 4x2x1 inch. It's much less of a handfull
than the Icom 2sat, and slips nicely into your shirt pocket.
Features galore, including alpha-numeric readout for named
memories, DTMF code squelch, paging, digital message paging (!)
plus tons of other stuff. The standard battery pack fits
entirely within the radio, and provides 1.5 watts on high
power. Other packs (larger) get you up to 5 watts if you want.
The keyboard is plenty big enough even for us fat-fingered
hams, and the keys seem very sturdy, with a nice positive
click. The display and keypad light up on demand. All in all
a wonderful little package; so far, I haven't found anything
I don't like. The only funny thing I've noticed is that the
touch tones seem to be delayed by about a quarter of a second
from when you hit the key. Don't know if this is a fault, a
feature, or just something I'm doing wrong. As you can tell,
I like it a lot. I've always been a sucker for little radios,
and this one really hit me where I live. The nice thing about
it is that I don't have to sacrifice much in the way of performance
or features to get the small size. I've compared it side by
side to the new Kenwood, and it's no contest. The Yaesu wins
hands down in size (quite a bit smaller than the K'wood),
features, and overall "niceness". Check it out; you won't
be disappointed. My local ham store is selling them over the
counter for $313; you can probably get them for under $300
from the mailorder guys.

Standard disclaimer: no connection with Yaesu, just a
satisfied user.

P.S.:
I hope to able to address the RF performance in a future
post, based on some bench testing I'm trying to arrange. My
impression based on use in our much-loved "intermod alley"
here in Tysons Corner, VA, is that it's better than average.

73...

[...]

The above quote seems to say that anyone can call for help if
the situation warrants it; it does not prohibit anything, except
"routine or non-emergency communications."

Im no expert on interpreting this stuff, so kindly correct me if
this is wrong.

Regardless of the proper interpretation of the above quote, as far
as Im concerned, ANY such laws are just ink on paper during an
emergency. I'd rather be a living law breaker than a dead law-abider.
(Admittedly this is an extreme example, but you get the idea.)

Verification. How do I know that WZ5RFK is legit? I can find out, at least, who belongs to KC5CZR; that's not the case with the temporary calls.

I understand the problem the FCC, and new hams, face...but, like every knotty problem, it has a simple and easy-to-understand wrong answer. The FCC has come up with exactly that.

They're already going to upgrade their systems; let's get that in place, as well as improving their work flow, and perhaps even let the VECs do more of the work. If we can't get the turnaround time under two weeks, something's horribly wrong. _That_ is the right answer.

>(I know that doubling over someone is a Bad Thing.)

Ah, the "monitoring" bit was still inappropriate usage. It's sort of
like walking up to two people chatting in the mall and saying "Bill,
eavesdropping" instead of "Hi I'm Bill, how are you, mind if I join you?".
On a busy machine, you'd normally just insert your callsign if you wanted
to join the conversation, and they'd pick you up on the next go round. If
one ham is signing, and you caught the call of the other ham, then calling
him directly with "KE4ZV, Hi this is Bill, N9VLS" would be *a* right way
to start a conversation. Only on a totally quiet channel would the "monitoring"
term be acceptable usage, and even then it should be redundant since we'd
expect you to listen before transmitting. Just popping your callsign out
is almost always the appropriate way to start or join a conversation on a
repeater. "Hey, anybody around? This is N9VLS." is also fairly well accepted
on many machines, but would be thought a bit wordy in some areas.

>And, they weren't ragging me about being a lazy nocode.
>They were quite happy to see me on the air.
>
>It was a FUN welcome.

That's good. Most people will make allowances for varying procedures.
It's usually best to conform to local usage as soon as you learn it
though. That'll assure that you continue to be welcome. Putting a
smile in your voice is almost always a door opener, even if your
procedures are non-standard for the machine in question.

4801. Radio Show: Ham Radio and More

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-30 17:10:50 UTC
From: john@anasazi.com
Message-ID: <1993Nov30.171050.5718@anasazi.com>
Source record: 273742

We had our first national broadcast of the radio show "Ham Radio and More."
I would be interested in getting email from those who heard us so we know
how our coverage is. Send to john@anasazi.com.

For those not familiar, Ham Radio and More is a Talk America network radio
show devoted to ham radio and related topics. We hope to cover much of
the US with the show, but that depends on which stations carry it. The
information on how a stations can pick up the show or how anyone can pick
it up on C-band satellite is available in a related ARRL report. If you want
this show, contact a local radio stations and see if they would carry it.
It lasts one hour at 1600MST (1800EST) each Sunday.

The whole point is that this is NOT an electronics newsgroup, but rather a newsgroup for amateur radio operators, not all of whom have--or even need to have--a detailed understanding of how the equipment they operate actually works. When such a person does express an interest in a technical matter, one might hope that those whose specialities center around technical aspects of the hobby would respond with encouragement, or if that is impossible, politeness. Fortunately, I can state that my own questions in this newsgroup have been answered with unfailing courtesy.

In this same vein, I will admit my surprise, after sitting for all the U.S. amateur radio examination elements, that there was such an emphasis on electronics, and so very little concerning public service, disaster readiness, first aid procedures, emergeny traffic handling, and so on. If we are really intended to be a provider of alternative communications services in times of national emergencies or local disasters, surely such knowledge is at least as important as the ability to homebrew a radio. But for some odd reason these topics are left almost entirely to specific organizations, while EVERYONE is required to have a general knowledge of electronics. Surely both are important. And maybe we could do more to test normal operating procedures as well.

...sample rationales deleted...

> I personally can not see one reason for not adopting the proposal. Currently
> we allow instant access to new privileges on upgrading, why not access to
> the privileges when first obtaining a license?

There are several reasons why I oppose the concept of an "instant license",
none of which have to do with the fact that 'I had to wait 6 weeks for my
license, so do you'.

The proposal as it stands now I believe is flawed. Your temporary
callsign will be WZ<# of call district><your initials>. Therefore,
my temporary callsign would be WZ1MPD, and a friend of mine would
have the callsign WZ1FA.

The reasons I feel the proposal is flawed are as follows:

1. There is no accountability as to who has what callsign. It is entirely
possible that a dozen people with common names will all be sharing the
same callsign in the same area. You can draw your own conclusions as to
the mass confusion this will cause.

2. The lack of accountability also creates problems when hams with
instant tickets break the rules. How do you contact someone whom the
FCC has no record of?

3. The potential for abuse of "instant" callsigns is very great. If I am
unlicensed, all I have to do is make up a new instant callsign once every
few months, and I can operate indefinitely.

4. As a licensed ham, my ticket is at stake when I key up and speak to
a station. If I am in a QSO with an unlicensed station, my ticket is
in jeopardy (although in all reality I doubt the FCC would issue a fine,
but you never know...)

5. What happens when a person with an "instant ticket" gains access to
HF, or upgrades? WZ1MPD/AA? Or just WZ1MPD still, since its an "instant
ticket" after all?

I do not believe that the "instant callsign" can be compared to someone
who upgrades and then operates with the temporary identifier /whatever.

For one thing, the person is already licensed and is on file with the FCC. Again, accountability.

The FCC states that the reason for the "instant callsign" is that they receive hundreds of phone calls from people asking what their callsign is. This proposal was put forth by the FCC as a way of decreasing the number of phone calls they get.

<KNOCK> Hello? McFly? Seems the answer to the FCC's problem is not to enact a rule change, but to simply STOP taking the damn calls asking "what's my callsign?" Once word got around that you can't call the FCC anymore, guess what? People will stop calling. Duhhhhh. Its so obvious, only something as stupid as a government bureaucrat couldn't think of it.

And yes, furthermore I believe that it is yet another step in the trend we've seen over the past ten years of the FCC "getting out" of the Amateur Radio business. First VECs, then lack of enforcement, now "instant callsigns". How soon before we don't need callsigns at all, because the FCC considers it "too much work"?

Followups to r.r.a.p...

Well if - .... . is considered an alternative *pronounciation* of the English word "the", then I find that an acceptable explanation. That still doesn't make Morse a language, at best it makes it a dialectical *pronounciation* of a natural language word. Now the question is how big is your vocabulary? For example, would you have "heard" all the words in this paragraph, or would you have had to spell out most of them? In natural languages, a vocabulary of 500 to 10,000 words, depending on context and the particular language, is considered necessary to be fluent. Are you fluent in a natural language using Morse pronunciation? I'll wager not.

>You've got to get out of the straightjacket-type thinking you've locked
>yourself into. Your hostility towards code makes you say some weird stuff.

I'm no more hostile to Morse than I am to ASCII. They're both just alphabetic encodings. ASCII is a more complete set of encodings than Morse, but that's merely a side issue. Both can be used to spell out natural language words. Neither is a language in itself.

>freestanding aluminum towers. I'm considering something like a Universal Mfg.
>50' tower. I'd probably mount a small tri-bander on it (14 to 18' boom).

Aluminum has a much lower fatigue strength than steel. Towers develop fairly unique vibrational modes depending on particular location and loading. So it's difficult to engineer them to fit any particular fatigue pattern. That means for aluminum that the tower must be heavily over engineered in order to withstand unpredictable fatigue stresses. Most aluminum towers are *not* so over engineered, and those that are are more expensive and larger than a similar steel tower. Aluminum also loses strength as it ages. So aluminum towers generally don't last as long as steel towers. Therefore, I don't recomend aluminum towers. Ordinary galvanized steel towers are usually the first choice, but in highly corrosive environments stainless steel towers are the best choice. Aluminum should only be considered if weight is the only criteria, and that's almost never the case, even for roof mounting.

Derek.

Once again you attempt to utilize fundamental physical principles to advance your treachery.

We who enjoy reading frivolity between the covers of QST simply KNOW our linear amplifiers boost the kinetic energy of the radio waves we emit. Our roof-mounted antenna recoil with such force the emission of a single dit cracks the joists in the ceiling.

We're talking raw power. Manly power.

Keep Max Planck and his quantum-bleeding-mechanics in the classroom where they belong. Real men run three-phase 440 into their shack. Real men have blisters on their balding scalps from high-power RF proximity effects. Don't tell US our photons aren't stronger than those whining 3KW QRPers. We have the radiation burns to prove it.

Yup. BUT...(and I think I said this before, but it may have been a private note rather than a posting) many localities have their own laws against POSSESSION of an unauthorized device capable of transmitting on the public safety frequencies. These were passed to control the "bananas" who interfere with police and fire transmissions: if you can't catch them in the act, at least you can take away their toys. Unfortunately, the HT in question probably violated such a law in the jurisdiction in question.

Thus the transmission was okay under federal law. The possession was illegal under local law. These laws appear to be constitutional and not pre-empted by any federal law.

Philadelphia, at least, has such a law on the books, and I suspect they enforce it when they have the opportunity. Were I to have such a device, I sure wouldn't wave my hand and say, "Me, me!" when the cops asked who placed the call. :-)

My $.02 worth:
I've often heard people getting ribbed for calling CQ on a repeater. It is, after all, a (shutter) imported from hf'ism and (like QTH for "where are you now") _can_ rub people the wrong way. Like Jay said, in Texas we always just assumed that a "monitoring" meant the caller was open for conversation. Around the Atlanta area I haven't heard CQ yet, but then again I haven't had much luck scareing up a contact when I "monitor".

But still, "monitoring" pretty simply says "Hi, I'm currently listening on this freq and would be willing to talk to some other amateur if they'd like to discuss pretty much any subject." Whew! Now THAT would be silly!

MY biggest gripe is the guy yelling "testing. TESTING." and then does not responding when I offer to help with a signal report. Maybe their speakers are busted but their mic's are good?

This seems to just the kind of subject that an organization of hams would champion. Lets face it, the San Diego Sheriff's Office hasn't gotten the publicity from this it deserves. A man's life may have been at stake, and a resourceful individual did the responsible thing. He ASKED for permission, passed the traffic, and cleared the frequency when completed. We as hams and as CITIZENS need to speak out loudly and give the San Diego Sheriff's Office the attention the have been seeking. I would recommend the ARRL publicly stand tall and be counted. If this issue is put to bed properly in San Diego, we might not need to address it anywhere else.

I'll be in the British Virgin Islands for a week next month. I'm not planning on any HFing, but I was thinking of bring along a VHF/UHF HT. I was wondering:

Will there be anyone to talk to? Repeaters?

If so, and if you have been (or are) there, is it worthwhile (and $20) to get a reciprocal license and bring my radio? (Obviously subjective - what's your opinion?)

Are the frequency allocations the same as for the US?

thanks, Mike Blackwell - ke3ig - mkb@cs.cmu.edu

> means each ham polices themselves. (as some others have appeared to
> indicate.)

(WRONG)

The FCC, in an agreement with the ARRL, established a "ham-cop" as you call it. THAT was the FCC's intent. And NO, according to the above mentioned document (and the way the ARRL interprets it), self-policing means Hams policing Hams, NOT Hams policing him/herself. The Amateur Auxiliary, Official Observers, Local Interference Committiees, et. al. The Amateur Auxiliary is responsible for maintance monitoring and amateur to amateur interfearance.

The idea that each ham should police himself, and therefore can do what ever he wants, may well be the reason for the increased problems (see discussion on 14.313). The idea was to have amateurs assist the FCC in manpower and time. Making the most of the FCC enforcement dollar.

The congress, in the finalized bill said;

" The Amateur Radio Service has been praised for being self-regulated. The Commission has reported that less time has been devoted to monitoring and regulating the Amateur Radio Service than to any other service because of its self-policing and dicipline.

" One primary purpose of the Conferance Substitute is to provice the Federal Communications Commission with the authority to implement various programs which will result in improvements in administration of the Amateur Radio Service and to cut the cost thereof. It will further allow the Amateur Radio Service to continue its tradition as the most self-regulated radio service in the United States, and to become to some extent self-administered, requiring less expenditure to government time and effort than in the past."

That was 1982, where have you been? Policing yourself and ignoring the actions of others? If you are serious about wanting the situation to improve, get involved in the solution.

Well, I heard from an OS/2 guru that a DOS VDM cannot process over 1100]
interrupts (virtual)/second. The problem seems only to be with the ax25
driver which generates many ints while performing software HDLC.

Funny--even in DOS on my system I must boot DOS 3.3 to get the ax25 driver
working at all...

4818. Shareware RTTY/FAX reception for the PC--FAQ

Newsgroup: rec.radio.amateur.misc
Date: 1993-11-30 23:32:44 UTC

Shareware RTTY/FAX Decoding Programs for the IBM PC

Frequently Asked Questions

by Dave Moisan, N1KGH

Last Revised--28 November 1993

Many people have gotten interested in receiving RTTY and FAX transmissions with their PC's. Shareware, combined with cheap, easy-to-build hardware, has put RTTY and FAX reception in reach of anyone with a good digital portable such as the Radio Shack DX440 or Sony 2010.

Two programs have become very popular: Hamcom 2.2, a RTTY terminal program, and JVFAX 6.0, a full-featured FAX/SSTV receive program. The two programs both use an identical basic interface, so one can get started in FAX and RTTY for almost nothing. Another program, PKTMON, lets you monitor HF and VHF packet off the air, using the same hardware.

This FAQ list is divided into five sections:

Introduction
Using HamComm
Using JVFAX
Using PKTMON
General Problems

Appendix--HamComm Interface Schematic and Parts List

INTRODUCTION

** Where do I get the software?

HamComm and JVFAX are available from a number of sources on the Internet, including the Simtel mirrors (such as wuarchive.wustl.edu) and nic.funet.fi (/pub/ham/misc); look for HAMCOM22.ZIP and JVFAX60.ZIP. PKTMON 1.2 is available from nic.funet.fi.

Note that HamComm 2.2--unlike earlier versions--is no longer freeware; registration is $20. It's still a bargain.

** What are the basic system requirements?

HamComm: Fast (8 MHz) XT or better, 320K free RAM, hard disk not required.

JVFAX: 286 or better, at least 1M RAM; a hard disk is
strongly recommended. Note that JVFAX has its
own extended memory driver, which might conflict
with QEMM and other memory drivers. (Version
6.0 *does* work with HIMEM.SYS, however.)

Pktmon: 286 or better.

** What are the basic receiver requirements?

I've successfully received RTTY, fax and Packet with my
Radio Shack DX400 digital portable, and have had less
luck with CW. Receivers like that will work, but table
top radios (Kenwood, Icom and Yaesu) and ham transceivers
are much more suited for this application.

** Where can I find plans for the basic interface?

The plans are included in the documentation for both Hamcom and
JVFAX. JVFAX has schematics for both the basic interface, and
a more sophisticated interface that also receives GOES/APT
satellite pictures.

A complete schematic and parts list is included at the end
of this FAQ list.

** I don't want to build it. Can I buy a interface?

Yes. William Nolle is selling his version of the interface,
called FAXCAP, and it includes all software discussed here.
Contact him at:

William Nolle
122 Phillips Rd
Hazel Green, AL 35750

(Disclaimer: I am not affliated with William, nor am I even
a customer, but merely a friend and fellow enthusiast.)

Also, Dieter Dippel is selling an interface (with surface-
mount components) which includes JVFAX and HamComm. Contact:

Dieter DIPPEL, DF4RD
Fenitzerstr. 33
D-90489 Nuernberg
Germany

Phone: (049) 911 / 55 92 96 between
18:00 and 20:00 german local time or at weekends.
(1700-1900 UTC)

Email: UNRZ45@daphne.rrze.uni-erlangen.de

** How does the interface work?

This is a zero-crossing detection circuit, made up of a 741
connected in an open-loop configuration. For every zero-
crossing (twice a cycle), an interrupt is generated.
HamComm measures the time between successive interrupts using
the PC timer chip.

** How do I connect it to my radio?

Simply run an audio cable from the interface box to the earphone/
headset output, record output, or data output of your radio. The
Sangean 803A has a record output, and the DX440 can be modified for
same. Note that the interface needs 100 mV of audio to work,
but most rigs can easily supply this.

** Can you transmit with the interface?

Depends on the software, and how you construct the interface.
Hamcomm will send through the speaker or TxD line of the serial
port; JVFAX sends through the speaker (and the TxD line starting
with version 6.0.) Pktmon doesn't transmit at all. See the
appendix for details.

USING HAMCOMM

** How do I set up HamComm?

There's a sample configuration file in the HamComm archive, HC.CFG
which explains the numerous parameters required for the program
to run. Here are the ones you should set:

select port com<n> (Select default com port, <n=1 to 4>)

Note: COM1 and COM2 are already defined. If you need to
use COM3 or COM4, here are the "define port" statements
to use:

define port com3 iobase 0x3e8 irq 4
define port com4 iobase 0x2e8 irq 3

You don't need to do this for COM1 or COM2 unless you have
an unusal setup.

If you want HamComm to keep time in UTC, include these two lines:

set timezone UTC
set timediff 7200

The timediff parameter is the time difference between UTC and
your local time (UTC minus local), in seconds. In the
example above, timediff is set to account for U.S. Eastern Standard
Time (-4 UTC).

There are many other configuration options, all explained in
HC.CFG.

** Where can I find RTTY on HF and what does it sound like?

The ham bands are the best place to find decodable RTTY. I tune into CFH, Halifax, Nova Scotia on 4271, 6496.5 and 10536 KHz. RTTY is usually sent on the half-hour. RTTY has a "deedle-deedle" sound that you're probably familiar with if you've ever randomly tuned the shortwave bands.

If you want to know what an RTTY signal sounds like, go to the RTTY screen (F3) and try control-T (transmit on/off). Type in some text and hit ENTER. You will hear a signal from the PC speaker according to the currently selected speed, shift and center frequency.

** How do I tune RTTY?

First, hit F9 for the tuning screen and, using the arrow keys, set the center frequency to 1200 Hz. For example, if you're trying to decode the ARRL bulletins on 3625 KHz, the tuning screen should look like this:

Signal Frequency: 01### Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
Space -> | | <- Mark
|

Center Frequency: 01200 Hz

Using the arrow keys, move the lower tuning bar between the two upper tuning bars. You may need to vary your BFO, RIT or clarifier so that the upper bars are centered on the display.

The difference between the two frequencies, or "distance" between the two upper bars is the *shift* of the RTTY signal. Hit Alt-K and select the appropriate shift--in this example, 170 Hz.

You'll know when the signal's tuned properly, because a train of square waves will appear at the bottom of the screen.

Next, hit Alt-S and select the *speed*; Ham RTTY is usually 45 baud. Outside of the ham bands, 50 and 75 bauds are most common

In HamComm 2.2, you can use the Bitlength Histogram screen to measure the speed. Hit F6--the baud rate will be indicated on the upper bit display. You won't get an accurate count on very noisy signals, however.

Note: If you're mathematically adept, you can figure out the speed yourself. Hit F8 to select the Scope and freeze the display by hitting Return. Measure the time interval of the _shortest_ peak, and calculate Baud rate = 1/t*10**-3, where t is in milliseconds.

Now, hit F3 (for Baudot), and readable text should scroll forth on
the screen. If it doesn't, hit the Tab key to toggle between
Normal and Inverted keying. If text is still unreadable, hit Alt-S
and adjust the speed.

** How do I log RTTY to a file?

Hit Ctrl-F; select the directory or file you want to save to and
hit Return. To stop logging, hit Ctrl-F again.

Here's some RTTY recorded off the air on 4271 Khz (at 0230 UTC):

avalon peninsula
east coast the bonavista peninsula only.
freezing rain warning continued for the bonavista peninsula only.
tonight..overcast. intermittent drizzle or freezing drizzle.
periods of freezing rainpm yrkwivonavista peninsula ending
overnight. winds becoming strong northerly. low zero.
friday..cloudy. patchy freezing g7+)-01vtov

** Whenever HamComm is receiving a string of numbers (like
from CFH or other weather stations), it comes in garbled.

First, turn off the Auto Unshift feature by hitting Ctrl-L;
the "L" annunciator on the bottom right of the screen should turn
off.

HamComm 2.2 has a weather broadcast mode that will automatically
decode weather synop broadcasts--the string of numbers you may
have seen. Here's a sample, again from CFH:

17:45:50 UTC end/tcf
17:45:52 UTC xxxxx 142346z
17:45:55 UTC snvd17 cwhx 142300
17:45:57 UTC bbxx [SHIP]
17:45:58 UTC 44139 [ship id]
17:45:59 UTC 14231 [day:14 UTC:2300] [Wind speed obtained from
anemometer (m/s)]
17:46:00 UTC 99443 [latitude:44.3]
17:46:00 UTC 70573 [longitude:57.3] [Latitude south, longitude west]
17:46:01 UTC 46/// [automatic] [cloud height:no data] [visibility:no data]
17:46:02 UTC /2809 [cloud cover:no data] [wind dir:280 deg, speed:9]
17:46:02 UTC 10092 [air temp:+9.2]
17:46:03 UTC 40075 [pressure at sea level:1007.5hPa]
17:46:05 UTC 57014 [pressure:decreasing] [change in 3h:1.4hPa]
17:46:05 UTC 22200 [ship direction: stationary, speed: 0 knots]
17:46:05 UTC 00082 [sea-surface temp: +8.2]
17:46:06 UTC 10805 [wave period:08 seconds, height:2.25-2.75m]
17:46:07 UTC 70023 333 [section 3]
17:46:08 UTC 91211
--- log closed Sun Nov 14 1993 18:02:36 UTC ---

(In the above example, note that the latitude is reversed
between north and south; this is a known bug.)

Hit Alt-T Y to decode SYNOP reports. Alt-T I decodes SHIP
format reports. HamComm will automatically recognize incoming reports
(prefixed with "aaxx", "bbxx" or "zczc" headers), but the Alt-T
commands are useful when you want to decode in the middle of a report
without waiting for the next one.

** I found RTTY, but Hamcom can't decode it.

A sad fact of life in the shortwave bands is that at least 3/4's
of all RTTY is encrypted, and alas, much of the unencrypted
traffic is not sent in plain Baudot. There still are many
decodable signals, but you'll need good references to find them.

** How do I decode CW?

Decoding CW is similar to decoding RTTY, except that there's only
one frequency to be concerned with. While you hear the CW,
go to the decoding screen, as below:

Signal Frequency: 01200 Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
|
|

Center Frequency: 01200 Hz

Just move the arrows so that the lower line is lined up with the
upper and hit F2.

Here's a sample of CW copied off the air, on 4281 Khz

vvv vvv vvv cqde vcs vcs vys qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv
vvv vxv cq de vcs vcs vcs qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv vvv
vvv cq de vcs vcs vcs qsx 4 6 and 8 mh7 chnl 3/4/7/-.--.. vvv
vvv vvv cq de vcs vc5 vcs qsx ......- 6 und 8 mhz chnl 3/4/7/8

Note that HamComm subsitutes dot-dash marks for any character it
can't decode.

** I'm hearing CW, but Hamcom just garbles it.

There are two different problems encountered with CW decoding in
HamComm. Here's what Django, DL5YEC, author of HamComm has to say:

Problem 1: Tone detection

For many people it is obvious that an RTTY signal has two states,
usually called mark/space or high/low tone. ANY data
transmission requires at least two states for 1 bit at a time and
CW is no exception. So what are the two states for CW? They
are the tone and ... NOISE ! You may be surprised to hear that
a certain amount of noise is REQUIRED to detect that the tone
has ended.

HamComm has an indicator for the tone detector output. At the bottom of the RX window, just to the right of the WPM display, is a small white dot that jumps up and down: up = tone detected, down = no tone (noise) detected. Listen to the signal and watch the jumping dot. It should follow the signal precisely and not jump around nervously or stick to one position.

The input signal is compared to the currently selected mark/space tones. To be regarded a valid tone the signal has to stay in that range for a certain amount of time. So the behaviour of the detector mainly depends on the currently selected SHIFT.

The tone detector output as displayed by the dot is the input to the character decoder.

Problem 2: Character decoding

In theory a dash is three times as long as a dot, the gaps within a character are dot-sized and the gaps between characters are dash-sized. In reality there are short and long tones and gaps of variable size because CW is usually 'hand-made.' The speed and length ratios also change during a transmission if the operator gets tired.

HamComm keeps a floating average of the tone duration to adjust to speed changes. Overall decoding quality mainly depends on the tone detector.

As an aside, I should mention that the bouncing-dot display also works great for RTTY; just tune the receiver until the dots bounce equally between top and bottom.

** Are there any reported bugs in HamComm?

As noted earlier, HamComm 2.2 has a bug in the WX decoder where the position reports are reversed from north to south in quadrants 5 and 7.

The "send text file" function transmits some text twice when in WORD mode.

USING JVFAX

** How do I set up JVFAX?

Select "Configuration" from the menu, and you should see a Config screen. Options are set using the arrow keys to select, and the space bar, - or + to set each option. Here are the options you need to set:

Demodulator: Set to "8 bits" and "Comparator". Specify the address and IRQ according to the following table:

For: Specify IRQ: and Address:
---- --- -------
COM1 4 03F8

COM2 3 02F8
COM3 4 03E8
COM4 3 02E8

Graphics and SSTV-Graph: Set this as appropriate for your system.
Most users can specify "VGA (640x480)". If you've Super VGA, see
the next paragraph, otherwise skip ahead to "Printers".

Configuring Super VGA: You'll have to choose between 16-color SVGA
and 256-color SVGA; the latter is required if you intend to view
false-color weather pix and for resolutions higher than 800x600.

Under the menu "Customising SVGA Parameters", complete the following
items. I'll use my elderly Trident card, set to 640x400x256,
as an example.

Chipset (256-color only): Select the name of the chipset in your
SVGA card (usually in your SVGA card manual).

AH/AL: Enter the register value for the video mode you want--this
can be found, again, in your SVGA card manual. In my case, I want
640x400x256 which is mode 5Ch, entered into AL.

BH/BL: Some SVGA cards, particularly VESA-standard cards, require
this register pair as well. My card doesn't use them.

Dots Per Line:
Number Of Lines: Self-explanatory. For my Trident, I enter 640 and 400
for the values.

Aspect Ratio: This is normally set to 10000 for standard (3:4 aspect
ratio) screens such as 640x480, 800x600, etc. It is calculated with
the following formula: (Lines/(Dots * .75))*10000. My Trident is
slightly nonstandard, so my aspect ratio is:

(400/(640*.75))*10000 = 8333

The JVFAX documentation lists settings for many popular cards.

Printer: Again, set this as appropriate for your system. Most
popular dot matrix printers and the HP Laserjet are supported.
(As an example, for my Panasonic 1124, I selected "Epson 24-pin".)

Enable scrolling: This determines whether faxes will scroll
off the screen when being received. Set this to "Yes".

Default Picture Directory: Enter the disk and directory where
faxes will be stored, e.g. "C:\WEFAX".

Store Pictures in GIF 89a: JVFAX uses the GIF 89a standard to store
special information on each fax, such as mode, LPM and IOC. Unless
you're using other GIF software that can't handle this standard,
leave this enabled ("Yes").

Miscellaneous Settings: Hit Esc to enter yet another configuration menu. There are just a few settings you need to make:

Quicksave: This feature lets you save the last picture sent; it works by continuously capturing faxes to a .GIF file, which may become *very* large. Unless you have lots of hard disk space, set this "off".

Initial RX Mode: Set to "1--Wefax 576"; this is the mode that almost all weather faxes are sent in.

Disable XMS use: Set to "No". Normally, if HIMEM.SYS is loaded by DOS, JVFAX will use it to manage memory. With some DOS/BIOS/hardware combinations, this may cause problems (blank pictures, lock-ups, etc.) so you may need to disable XMS (set parameter "Yes"). This will degrade JVFAX's performance so leave this alone unless you are actually having problems.

Hit Ctrl-Enter to leave this menu. Hit Ctrl-Enter again, and you're done!

** Where do I find fax and what does it sound like?

A Fax signal will have a "scratchy wheel" sound when sending a picture, and a carrier tone when idle. It can be found easily in the maritime bands. Unlike RTTY, there are few variations, and no transmissions are encrypted that I know of.

Two stations I hear regularly on the US East Coast are NAM, Norfolk, VA on 3356, 8080 (irregular) and 10865 KHz, and CFH, Halifax, NS on 4271, 6496.5 and 10536. CFH sends faxes on the hour, generally. I've found press fax on 9242, from Buenos Aires, Argentina.

** What modes are faxes usually sent in?

Weather faxes are usually sent with an IOC (Index of Correlation--the ratio of width to height) of 576, and an LPM (Lines Per Minute) of 120. Press faxes, the few I have found, use an IOC of 288 and an LPM of 60.

** OK, I'm hearing it. How do I tune in?

Using NAM, 10865 KHz as an example, follow these steps:

1) From the JVFAX main menu, hit F (Fax), and you'll be shown a blank screen with a tuning indicator and a menu box on the bottom of the screen.

2) Select the mode by hitting 1 ("Wefax 576").

3) Set the deviation to 400 by hitting the D key till it comes up.

4) Using your BFO, RIT or clarifier, tune the signal (in lower sideband) until you see a peak on the tuning indicator. Tune this peak towards the W (white) end of the scale (This will normally be 1.9 Khz below the center frequency, in this case 10863.1 Khz.) The indicator should look like this:

```
! <- Signal
! peak
! should
. . . .. .. .. . . ##! be here
----------------------------------------
B W
```

5) Hit A (APT); it should read "Running" and you should start to see a fax appear on the screen! To stop recieving, hit A again.

NOTE: If you have selectable filters on your receiver, set them to "wide" or "FAX" and set the RF gain as high as possible without overloading.

** I don't get a fax, or I get something garbled.

Check the mode; most fax transmissions use "Wefax 576", mode 1 in the program. The LPM should be 120. Check your connections to the interface. If that's in order, you may have an RFI or interrupt problem (see questions in "General Problems").

** I get a fax, but it comes out slanted.

Hit / and a line will appear; use the arrow keys to tilt and move the line so that it's lined up with a line on the fax (such as a border or a chart line). Hit Return, and the fax should now come in straight. Note that this is a permanent adjustment, and you shouldn't need to fix this ever again, no matter what faxes you subsequently receive.

** I get a fax, but it's not aligned with the edge of the screen.

Hit R (Rotate) and move a line with the arrow keys to the left edge of the fax (there'll be a black bar where the fax is supposed to start.) Hit Return and the fax should now be properly aligned.

** My fax is negative!

You're receiving the fax on the wrong sideband; try the other sideband. Most faxes are sent in LSB. A few press stations transmit negative pictures (JVFAX can be set to fix this; see the docs.)

** My fax is too dark.

** My fax is too light.

Your receiver is mistuned. If the fax is too dark, tune towards the white end of the tuning scale (peak moves towards W). If the fax is too light (washed out), tune towards the black end of the tuning scale (peak moves towards B).

Also, make sure the deviation is set correctly--at 400 for most faxes. This is especially important for receiving the GOES satellite images that NAM and other stations send.

** I started receiving a fax, but JVFAX stopped it (APT "waiting").

When reception is noisy or weak, JVFAX often interprets a noise burst to mean "end of picture". Hit A again to restart receiving. If this happens more than once, you probably won't get a very good fax anyway.

** How do I save a fax to disk?

While you're not receiving a fax (APT "waiting"), the S key will toggle the save-file option on and off. Faxes will be saved in .GIF format to the disk and subdirectory you specified in the configuration screen.

** I enabled Save to File, but when I hit A to start a fax, the Save feature turned off.

Go to the configuration screen (C from main menu) and check the save file specification. JVFAX won't save to a file if there's a typo (like "C:\\JVFAX") but it won't notify you of the error either.

** How do I print a fax?

Two ways:

1) While you're in the fax receive mode and not receiving a fax (APT "waiting"), P will enable your printer; it's a toggle, so hit P again to disable printing.

NOTE: You cannot have both Save to File and Print options enabled at once. Also, once the fax is printing, the Rotate command will not work on the printout.

2) Hit H (Show and Send Pictures). Select the fax you want to print. When it appears on the screen, hit P. JVFAX will ask how much width it will print in (0-100%); hit Return for the default (100%).

** The GIFs I save are too big! How do I shrink them?

It's not uncommon for weather faxes to be very large, especially if you regularly pick up 16-shade GOES images over NAM (a recent GOES fax from them "weighed in" at 870k!)

There are several methods you can use to shrink the size of your GIFs:

1) You can crop them. From the main menu select H (Show and Send Pictures); from the directory listing, select the file you want to crop. The fax will show up on the screen--select the Z (Zoom) option. Use the arrow keys to move the zoom box (which is about the size of a regular 640x480 VGA screen), and the X, Y, + and - keys to resize it. Hit Return and the cropped image will fill the screen. Hit S to save it (under a different name.)

2) You can reduce the resolution on faxes to be received. Most faxes (of the Wefax 576 variety) have a resolution of 1810x 1000, which makes for beautiful printouts, but is overkill if you're just using a GIF viewer.

To fix this, go into the Mode Editor (M from the main menu) and select the mode you normally use (e.g. Wefax 576). Step through the options with the arrow keys and select Resolution. For Wefax 576, it'll normally be 1810. Enter a smaller value (800 is OK) and hit Return.

If you're only interested in charts and not satellite images, select the Grays option and set the number of shades to 2 (B&W only--no gray scale). Your GIFs should be much smaller, though at a significant loss of resolution. (That being said, I once saved some GOES images from NAM for a friend of mine in 800x600x4 and they still looked good.)

** I get an all-white/all-black signal, no matter what signal is coming in on the receiver.

** I get horizontal white/black bands on my pictures.

** I get a white peak on the tuning indicator that doesn't move.

Either your audio cable to the interface is broken, or you have an interrupt conflict between serial ports. If it's the latter you may need to move the interface to another port.
(See "General Problems" for more on troubleshooting this.)

USING PKTMON

Unlike HamComm and JVFAX, Pktmon has few options and is simpler in scope. Using the same interface, Pktmon will decode HF and VHF packet. Pktmon can log to a file, and will optionally keep track of packets, assembling them into separate files for you. Note that the program is receive-only.

While it will never approach, let alone replace, Baycom or a TNC, I've been delighted with its very ingenious attempt at implementing AX.25 in software, and have found it a surprisingly fair performer. It even comes with source code (Turbo Pascal) for implementing your own projects with the interface!

There isn't much to running Pktmon, so here's a quick rundown through the prompts.

"COM 1 or 2?" Self-explanatory.
Pktmon doesn't support COM3 or COM4.

"Packet type?" Enter 1 for HF packet or 2 or 3 for VHF packet.
I've never noticed a difference between the latter
two options in use.

"Log bad packets?" If you answer Y, packets with CRC errors will
printed, otherwise, not. I usually choose to
log them.

"File to log all packets"

Self-explanatory. If you don't specify a file,
packets will go on the screen.

"File to log sorted packets"

Enter a filename, _no extension_. Pktmon will
sort packets to the files <n:filename.#>, #=
0 to 9. It also creates a file <n:filename.OTH>
for uncategorized packets such as beacons.

That's it. Pktmon will start decoding packets until you hit Return.
There's a tuning indicator on the top of the screen that indicates
activity. Here are some sample unsorted packets copied off the air
on 14099 Khz around 2300:

Started Logging on 1993-04-16 at 18:00:11
[...]
18:03:00 => CQ -0 WA2GGI-0 Ctrl:03 [UnAck Info] Pid:F0

82 total frames received and 6 good ones + 3 CRC errors
Stopped logging on 1993-04-16 at 18:20:42

It's rather like reading the news on an RS232 service monitor,
isn't it? :) Note that control characters are depicted as "#cc".

Now, here are some sorted packets:

****** File open at 18:03:16 on 1993-04-16 for
WA2GGI-0 => K4YPE -0 traffic

**HI BOB IN BOCA RATON FL.BUSY NOW PLEASE LEAVE MESSAGE ON MAILBOX
TNX. [1 lost pkts] ,RM,S, or Help >

****** File open at 18:13:28 on 1993-04-16
for KC4FS -0 => W1DXQ -0 traffic

Phone call Jack. Please wait...

****** connection inactive for 5 minutes

Now, the questions:

** Where do I find packet and what does it sound like?

On HF, packet can be found mainly at the lower end of 20 meters
(14090-14150 usually) and in the 30 meter band (10100-10150 Khz).
VHF packet can be found on 145.01, 145.03, 145.05, 145.07 and
145.09, among other places. It has a "braaaap..." sound quite
unlike RTTY.

** How do you tune in packets on HF?

On the upper edge of the screen, there's an "A" scale. While
hearing packets, tune VERY carefully until the scale reads 6 or
higher. Pktmon expects a tone frequency of about 1000 Hz.

** I'm logging sorted packets, but they're missing linefeeds.

You'll have to go into your favorite ASCII word processor and
have it insert linefeeds. I usually copy all the <n:filename.#>
files into a single file and fix it there.

** I'm getting lots of CRC errors.

On HF, this is, sadly, normal. Packet is just not well suited
to a ever-changing ionosphere, and it's marvelous that it works
at all. (When I copied the sample text, the ionosphere was
very quiet, an unusual occurence as I'm writing this.)

On VHF, on the other hand, CRC errors may be a result of Pktmon
being unable to keep up with transmission. 1200 baud is near
the limit for this type of interface. I've also found that with
my setup (in an apartment), I seem to be prone to multipath
and other VHF anomalies that disrupt reception, especially
of packet.

** The program locks up on me when receiving lots of packets!

If there's too much activity on the air, or the receiving tone
frequency is too high, Pktmon tends to lock up, as it can't
"follow" the signals fast enough. This has been reported by
several users on Fidonet.

According to the author, Pawel Jalocha, if Pktmon takes a long
time to terminate upon hitting Return, your machine may be

too slow.

GENERAL HARDWARE PROBLEMS

** Can I use EMM386/QEMM or other memory managers with HC, JVFAX or PKTMON?

Generally, no. HamComm, JVFAX and PKTMON are interrupt-intensive and use up most of the CPU cycles. That's the price you pay for having the demodulation and decoding done in software (rather than in a TNC). JVFAX comes with its own memory manager, anyway.

Note: While JVFAX 6.0 and HIMEM.SYS seem to work fine, if you have interrupt problems (blank pictures, streaks), try removing "DEVICE=HIMEM.SYS" and "DOS=HIGH" statements from your CONFIG.SYS before using JVFAX. I've not seen any problems with HIMEM and HamComm or Pktmon.

If you regularly use EMM drivers, Windows or Desqview, make up a minimal boot disk disabling all such programs, before running HamComm, JVFAX or PKTMON.

** I can't seem to receive freqs. higher than 100 Hz on the HamComm tuning screen.

The interface may not be receiving enough power from the serial port to operate. Modifications for a battery-powered interface are in the appendix.

** I get noise from my computer--HELP!

One of the most difficult problems in linking PC's with radios is RFI. It's beyond the scope of this FAQ list to cover every possible contingency, but here are some suggestions:

1) Keep your computer and your antenna *well* separated from each other and use good, well-shielded, coax for the lead-in.

2) The HamComm interface should be *shielded*--use a metal or foil-lined box. Use good shielded cable for both the audio and data connections.

3) Use RFI toroids (available at Radio Shack) on all cables.

4) Install 0.1 uF capacitors from the DTR and RTS lines to ground.

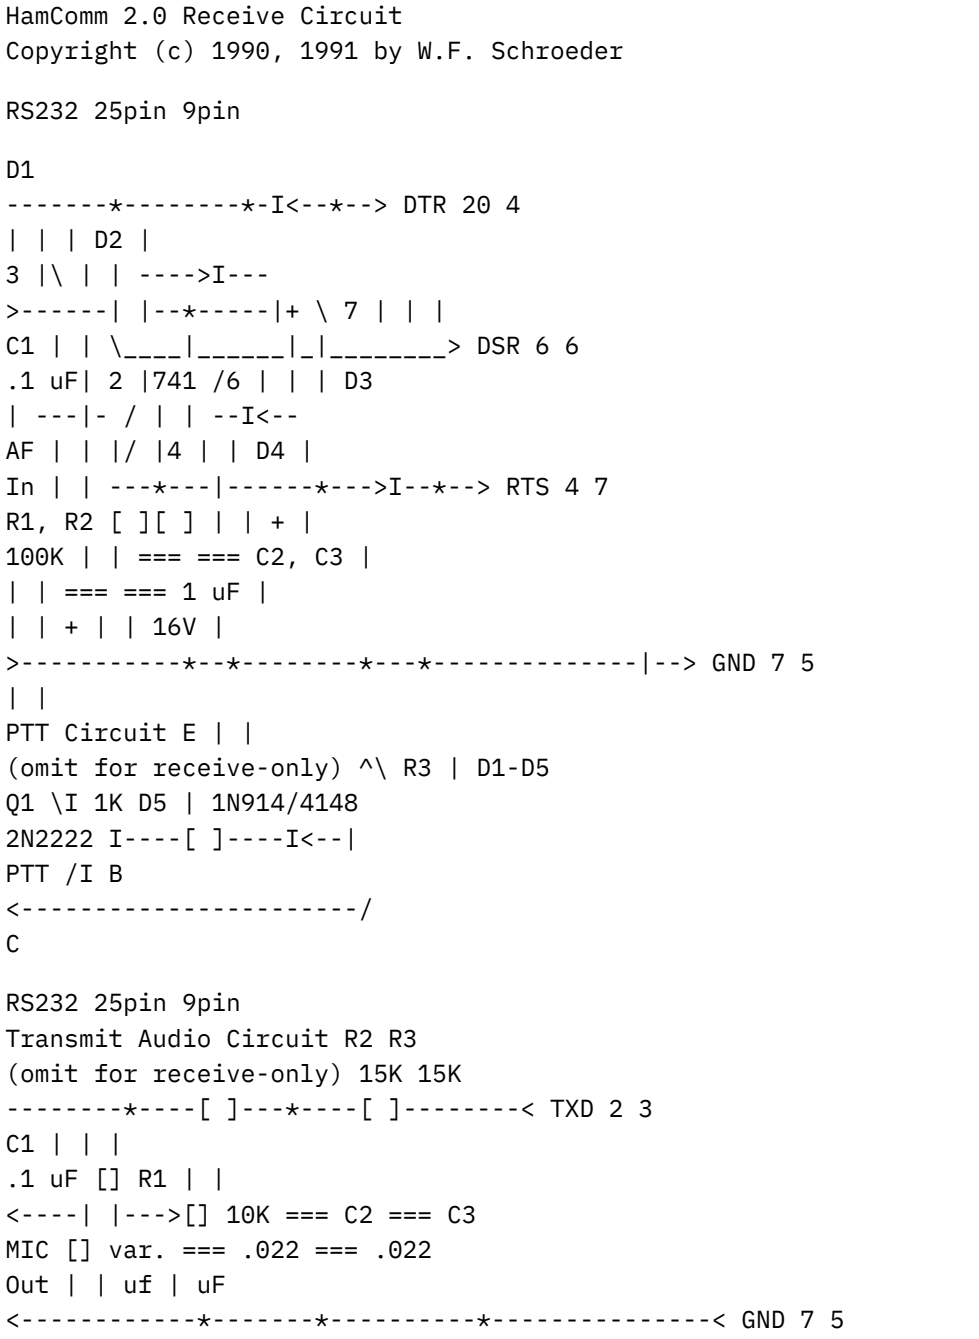
5) Install an audio isolation transformer between HamComm and the radio. (Radio Shack #273-1374).

6) Make sure the monitor, printer and their connecting cables are well shielded. Monitor noise is very common, as is printer noise.

In my case, I had to do all of those steps. My 286 PC was feeding RFI back through the earphone jack of my radio), *desensing* it (ouch!) I never got all the RFI out, but I reduced it considerably so that I only get a slight increase in background noise on a few frequencies.

APPENDIX -- THE HAMCOMM INTERFACE SCHEMATIC

Here's a schematic of the HamComm interface, reproduced with permission:



Battery Power Modification

```
+ ! + !
To Pin 7 of IC1 <--------!!---!!--------> To Pin 4 of IC1
! !
B1 (9V) B2 (9V)
```

Disconnect D1, D2, D3, D4, C2 and C3.

NOTE: HamComm sends RTTY through the COM port's TxD line, as well as the speaker. See the HamComm docs for more details.

If you're just interested in receive, omit the PTT and transmit audio circuitry.

None of the parts are critical, so raid your junkbox! Prices for equivalent Radio Shack parts are given for reference--which you can beat by judicious shopping/scrounging.

Parts List -- Main Circuit

Part Value Radio Shack # Price (1994 catalog)

C1 0.1 uF 272-135 $0.69 (for 2)
C2, C3 1 uF 16 V 272-1434 $0.59 each
D1-D4 Diode, 1N914 276-1122 $1.19 (for 10)
*D5 Diode, 1N914 276-1122
IC1 Op amp, 741 276-007 $0.79
R1, R2 100K 271-045 $0.39 (for 2)
*R3 1K 271-023 $0.39 (for 2)
*Q1 Trans. 2N2222 276-2009 $0.59

* Not needed for receive-only interface

Parts List -- Transmit Audio Filter

Part Value Radio Shack #

C1 .1 uF 272-135 $0.69 (for 2)
C2 .022uF 272-1066 $0.69 (for 2)
C3 .022uF 272-1066
R1 10 K var. 271-282 $0.49
R2, R3 15 K 271-036 $0.39 (for 2)

Miscellaneous:

Enclosure (RS #270-239 recommended, $2.19), PC board (RS #276-170, $2.79), audio jack (RS #274-316, $2.19 for 4), RFI toroids (RS #273-104 $7.95 for 2), DB-9 connector (RS #276-1536, $1.29), audio cable, plug to match radio.

If you buy all Radio Shack parts for the converter, it should cost $15 for the full circuit (plus transmit portion), not including the RFI toroids. Again, the circuit is not really critical--if you have any parts lying around that fit, use them!

SOME RTTY AND FAX FREQUENCIES

Here's a short list of RTTY and FAX frequencies heard around the world. It's nowhere near complete, but it'll get you started. These are mostly meteorological stations, with some press stations thrown in.

All FAX stations have a LPM and IOC of 120 and 576 unless otherwise noted. All frequencies are in KHz:

Station Frequencies Comments
------- ----------- --------

CFH, Halifax, NS Canada 4297, 6496.5, 10536, RTTY 75 baud/850 Hz

USA 18102.5, 21095, 28095

There's now a database program of weather fax stations, WXFAX,
that contains information on 101 stations on 312 frequencies,
which may be sorted and printed in any order; it also includes
sample faxes. A demo copy can be found on nic.funet.fi, directory
pub/dx/software/msdos/misc, file WXFAX.LZH.

CLOSING COMMENTS

This FAQ list was the inspiration of myself and many others on the
Fidonet SHORTWAVE echo, who have been using and experimenting with
HamComm and JVFAX for over six months, trading ideas and hints along
the way. When more people asked me for help, there and on the
Internet, I thought of the obvious and wrote this! <g>

The following get credit for lending me a hand:

W.F. Schroeder (DL5YEC), Pawel Jalocha (SP9VRC), Reid Kelly,
John Palaima (N1NIG), William Nolle, Tom Carney (WB9RJX),
Ken McKenzie, Derek Buchler, Stephen Lee, Marius Rensen and many
others not cited here.

Pete, this is the way it starts.

First it's computers. Then you move to amateur radio. Next you'll be
wanting to get involved in basement-mounted fusion reactors and home-built
spacecraft.

Take my advice--get out now--before it's too late. Technical junkie-ism is
a terrible dehibilitating disease that ruins marriages and undermines the
sanctity of the American family.

Take it from one who still has the rusted mounting bolts for the
liquid-cooled CO2 laser sunken into his driveway--forget radio. Try
professional golf. It's easier to master and you make more money.

Joe

I have a feeling that there is more to this than has met your eye. Perhaps
it wasn't really an 'emergency' but rather just a difficult situation and
at least in the eyes of the Sheriffs office (and perhaps soon the FCC's)
it was not acceptable. As for being forced to forfeit a radio, that seems
highly suspicious. You don't even need a license to own a radio.

>I was wondering what is the correct thing to do if one has a radio that

>anyone any advice on what one should do if a similar event happened to
>me? No legal advice expected, just interested on what the folks on
>the net may have to say.

I don't believe you need to be an amateur. I think that ANYONE can use
ANY frequency to call for help in a bona fide emergency.

Just be prepared to prove that it was necessary. Emergencies like needing
a tow are not as extreme as someone with life threatening injuries or
the threat of large scale property damage (like a house on fire, etc)
and of course you'll need to prove there was no other reasonable means
of communication available.

Probably a pretty difficult thing to do...

>generally creating some sort of bad feelings.

I was previously licensed in Canada (VE3TTD), and one of the first things I did was to join a repeater club. In addition to the latest newsletter, their first mailer to me included the link map, autopatch codes, repeater FAQ, and etiquette guidelines. Although I had listened for a while while waiting for my license, there were several good pointers. They were, of course, interested in proper use of the repeater, and instead of expecting others to learn by trial and error, they made an attempt at creating a "proper" repeater user out of every new member out there.

I would suggest having something like the above made up for your repeater(s), and offering it to new licensees when they are heard (with mistakes, or without). Offering it "to make it easier to those who are new to THIS repeater" should take the sting out of it by making it clear that it is for thier benefit.

Last-modified: $Date: 1993/05/16 21:57 $
Version: $Revision: 1.05 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

The Full Kp Indices for 29 NOV 93 are: 4- 2- 2o 2o 2o 2- 2- 2-

SYNOPSIS OF ACTIVITY

Solar activity was low. A few C-class x-ray bursts
occurred. The largest of these was a C9 at 30/0608Z associated
with minor discrete radio emissions. Region 7624 (N03W14)
showed minor growth and produced a single B-class subflare.
Region 7627 (S18E70) displayed active surging as it continued
to rotate into view. It also produced an eruptive prominence
very early in the period which reached 0.18 solar radii. New
Region 7628 (S21W58) was also numbered.

Solar activity forecast: solar activity is expected to be
low. Regions 7624 and 7627 may produce C-class flares. Region

7627 also provides a slight chance for an M-class flare.

The geomagnetic field has been at quiet levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be at major storm levels during the first day due to coronal hole effects. Activity is expected to gradually decline to mostly active levels by the final day.

Event probabilities 01 dec-03 dec

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 dec-03 dec

A. Middle Latitudes
Active 20/25/25
Minor Storm 25/20/20
Major-Severe Storm 40/15/15

B. High Latitudes
Active 20/20/25
Minor Storm 20/25/25
Major-Severe Storm 45/20/20

HF propagation conditions continued normal throughout the day. Conditions are expected to become substantially degraded on 01 December due to a well-placed coronal hole. Very poor to frequently useless propagation is expected over many transpolar and transauroral paths, particularly those in the night-sectors. Middle latitudes should see fair to occasionally very poor propagation with the heaviest degradation occuring the local night hours. Full recovery is not expected for several days after the storm subsides.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

4828. Re: W5YI's coverage of "temporary callsigns"

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 05:09:14 UTC
From: msattler@netcom.com
Message-ID: <msattlerCHCBnE.M4@netcom.com>
Source record: 273740

I believe that the potential callsign collisions and
accountability problems make the "instant callsign"
proposal troubling.

What I'd like to see is the VECs using a (gasp) laptop
computer to exchange the passing applicant's names
& addresses for an instant valid callsign via the FCC
computer system. Just like the 20th century.

Get up on the wrong side of bed, did we?

Most of the HAM-server requests come with two days of the posting of the
index. Seems to me that some folks are getting good use of it.

It if aggravates you so, put HAM-server in your kill file.

I do apologize, however, for the duplicate posts of the index. It was
a case of my scheduler going awry.

Hi

I'm looking for information on High-Speed PAcket Modems (9600 +)
that will operate in a 3Khz Bandwidth, if possible.

Any information will be welcome, I'm specifically looking for chipsets or chip
data to homebrew my own designs.

Please reply by mail, I'll summarise for the newsgroup if the replies are
worth while.

4832. smith14.zip - Hams: Interactive Smith chart calculator

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 09:02:21 UTC
From: FONTANA@itnvax.science.unitn.it
Message-ID: <9312010902.kp1270@SimTel.Coast.NET>
Source record: 273746
Cross-posted to: comp.archives.msdos.announce,rec.radio.amateur.misc

I have uploaded to the SimTel Software Repository (available by anonymous ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
smith14.zip Hams: Interactive Smith chart calculator

This program is a Smith chart calculator. It displays on an EGA screen the impedance chart, the admittance chart, the coefficient of reflection chart and the Q chart.

An info display and a graphics cursor is used to explore numerically the plane. Elements (impedances, capacitors, inductors, transmission lines, stubs and ideal transformers) are entered by the keyboard and the resulting graph is immediately drawn on the chart. Up to two parameters of each element can be trimmed using two individual keys (up and down, upper and lower case).

The program offers: hardcopy, frequency sweep, circle drawing, montecarlo analysis, schematic synthesis, and autotuning. A pop-up calculator for complex numbers is also included.

smith14.zip has replaced smith13.zip.

Uploaded by the author.

Greetings,

Giorgio Fontana

> Did he then go on to explain how a photon torpedo worked ?
>
> Cheers,
> David GM4ZNX
>

No I did not explain photon torpedoes. However I made one tonight with an HF amplifier accident. Fortunately for me I'm still here to read this message. We still have headaches from the 40 amp 110 volt component that flew out of the case in great fury, trying to catch the RF that was generated for the split second of plasma flash. I'm not throwing that switch tomorrow night ... someone else can do that.

Now as to the Photon energy thing, I have only one question.

What type of wine, a red or a white, is best served with crow.
Can you recommend a good Label or vintage.

You almost caught me again eh!
I wasn't trying to suggest that the C=64 is the final answer to Packet, merely that you don't have to have the biggest, fastest, most expensive toys on the block to participate in Ham Radio.

With respect to the Baycom, it was developed (hacked) on the C=64, and cloned/ported/ whatever to the IBM environment.
I wasn't trying to present the whole story. I was just trying to present the "Frugal Gourmet/Urban Peasant" approach to Ham Radio. See I do watch things besides (yuck WWF) and I'm not married to my sister either.

Just plain dumb old Bill

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Edwin Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called StratComm) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 4 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

Amateur Radio Elmers Resource Directory (as of 12/01/93)
++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.tele.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, soon to replace with Tnet-x1g on one and a PC NOS-switch on the other. And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there.

ampr.org IP Coordinator for California - Los Angeles and San Fernando Valley subnet (44.016.xxx.xxx)

"We're here to help, we don't loan tools" (Just kidding....put me on the list). Monday-Thursday 8 AM to 9 PM Pacific time, Friday 8 am to 5 pm.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

++

""""""

Interested in helping *any* would-be ham get their ticket. Ham Radio is a great(!) hobby and should not kept a secret!

**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under /mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW (or one of the other programs).

I am always receptive to individuals interested in maintenance, enhancements, and non-commercial distribution for these shareware programs.

++
+ Jay Freeman, WT9S Packet: wt9s@w9yci.il.usa.noam +
+ internet: freeman@eagle.sangamon.edu +
++

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

Internet: ccoprfm@prism.gatech.edu
Bitnet: ccoprfm@gitvm1.bitnet

I am the list owner of a mailing list for people who have/are interested
in products produced by Advanced Computer Controls Inc. (ACC). For those who
might not know what ACC does; they produce products (mostly for the amateur
radio service) such as repeater controllers, digital voice recorders, remote

base control units, etc.

To join the ACC (Advanced Computer Controls) equipment discussion
mailing-list, send E-mail to listserv@gtri01.gatech.edu with "subscribe
acc-l your-name" in the body of the message. An acknowledgement and
welcome message will follow. Administrivia, policy questions,
or other queries may be directed to me.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
SASE with 98 cents postage is appreciated. Electronic versions
available soon. Please specify the desired documents in your
correspondence.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

It has been over ten years since I have been to the British
Virgins, but my dad and I both got reciprical licenses when we
went. There are good repeaters down there and you can hit many
islands at once, depending on your location. We rented a sailboat
and were able to communicate throught the islands at all times.
Certain repeaters will be blocked by mountains on the islands at
times, but overall, it was beneficial.
By the way, I believe 3rd party traffic is still illegal within the
BVI's and their territorial waters, so be watchful.
Have Fun. It's easy to get the reciprical (just paperwork & $20).
- Pete

This can be VERY cheap--I picked up, at a local ham club auction, a working dumb terminal for $5.00. It works fine with a TNC, and gives newcomers to packet, RTTY and the like a quick intro. I don't mind hauling it to a club meeting for a demo, or lending it to somebody who wants to try packet and see if he likes it before springing for a computer and TNC. I sure wouldn't do that with my regular equipment.

4842. Soundblaster Software

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 13:07:13 UTC
From: jwa@tellabs.com
Message-ID: <1993Dec1.130713.342@tellab5.tellabs.com>
Source record: 273773

There has been several postings from persons inquiring
about the lack of software that uses the Soundblaster
to receive RTTY.

The soundblaster is simply an A to D, D to A audio board.
Any audio filtering thats required is performed by the PC.
The PC gets the data (that was was converted from an analog
signal) and performes a mathematical function that filters
the signal. The signal can then be decoded into ascii
characters and displayed on the screen.

The problem is, it's very difficult to write software for
a PC that is downward compatable and do the math that is
required to properly filter the signal. I'm sure it can be
done but I don't think it can perform as well as a PK232,
for example.

Unless your using a 486 with a math co-processor, there would
be timing problems that would make it difficult for the PC to
filter and decode FSK especially at 300 baud. There are programs,
like Hamcom, that can copy RTTY and decode FSK without an FSK
demodulator or sound board but it performs poorly even in moderate,
noisey conditions.

That's where a DSP shines! Complex filters can be implimented
to pull weak signals from the noise. There just isn't enough
speed, even in a 486-66 to perform the filter routines, decode
the data, do the timing functions and run a user friendly
terminal program.

A DSP board, on the other hand, can function as a sound co-
processor that can run it's own software to decode the tones.
Then the PC will have more than enough time to decode the data,
do the timing functions and display the text.

>Does anybody know of a program that will generate Postscript files for
>printing labels for dials, rotary switches, meters, etc.? I thought I

probably any drafting program that can produce PostScript output would work as
probably would Don Lancaster's Gonzo PowerTools. Also things like Adobe
Illustrator probably could fill the bill. also possible would be something
like Adobe Streamline that could convert a scanned image of a desired meter
face into PostScript code too.

In article <CHByrp.JzC@murdoch.acc.Virginia.EDU> jeg7e@lambda.itc.
irginia.EDU (Jon Gefaell) writes

> [snip, snip]
>
>Just be prepared to prove that it was necessary. Emergencies like needing
>a tow are not as extreme as someone with life threatening injuries or
>the threat of large scale property damage (like a house on fire, etc)
>and of course you'll need to prove there was no other reasonable means
>of communication available.

The rules, the text of which I posted last week, do not address the
severity of threat. They only specify threat to life or property.
A few years ago I came upon a lady withy a disabled car on the shoulder
of I90 in the western Chicago suburbs during rush hour. Being parked on
the shoulder of an expressway is a danger to both life and property. I
used the autopatch to try to to contact a gas station that could provide
her service under her auto club (Chicago Motor Club). I was unable to do
contact one, so I called the state police and they agreed to contact a gas
station that could provide her with service.

I was chastised by one or more hams on the repeater when I did this. I
broke no rules and advised them of this. In subsequent conversations with
hams who are very familiar with the rules, I found agreement with that
my actions were proper.

The OSU Amateur Radio Club will hold its monthly meeting tonight at 6:30pm at the W8LT station in the OSU Stadium.

All intrested are invited to attend as we will be discussing satellite communications.

If you don't know how to get to the station, please meet at 6:30 outside of gate 28 on the SE side of the stadium (closest to Larkins Hall)

For more information, call the station's InfoLine at 292-5437 or Eric at 297-8042.

4850. Alinco DJF1T-HP dead

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 15:35:09 UTC
From: nnyx@w3eax.umd.edu
Message-ID: <2didjd$m01@hecate.umd.edu>
Source record: 273760

I purchased a new ALINCO DJF1T-HP, and ever since the day I bought it, I have been having problems with it. The first problem was with the keyboard lighting (only half of the keyboard would light). Then I have been having problems with the internal ribbon cables, which would intermittently cause loss of certain functions. And just recently, the radio started to smoke and has ceased to function at all (now at the shop for gut replacement) :(.
Has anyone had any problems with their ALINCO DJF1T-HP?

Thanks.

> In article <VkHPDc7w165w@stat.com> david@stat.com (David Dodell) writes:
>>I'm looking for a program for logging casual contacts (vs contest
>>operation) ... any suggestions?

I've been using Hyperlog for general logging purposes. (I think it
isn't quite efficient enough for a contest, and doesn't give contest
info (QSO's per hour, total points, multipliers, etc.) but it is a
nice program for general logging purposes.
In addition to all the normal stuff, it tracks WAS and DXCC, and it
has a WINDOW that allows you to monitor or connect to the DX Cluster.
It even keeps tracks of DX spots it hears (whether you're connected or
not) so you can leave the radio on, come into the room at any time and
his a key to see the latest spots.
Hyperlog comes as Shareware, but if you decide to keep it you
MUST register and pay $45.00. If you don't register, the program has
built in nag screens that will drive you crazy. Anyway, I like it;
you can try the shareware free for a month or more, and then decide.

Trunked repeaters move to their channel assignment just as the transmitter is keyed so you need to wait a momemt before setting the packet. That's easy to do. AX.25 packet TNCs have a TXDELAY setting that causes a delay between transmit key up and packet tranmission. At home my TNC/Radio combination is set to 10 ms delay. When I ran packet through a voice repeater-type of system, I had TXD set to 40ms. For a trunked repeater, you will probably need something a little longer.

Subject: Sumitomo resume production...

Sumitomo Chemical To Resume Epoxy Resin Production 11/12/93

TOKYO, JAPAN, 1993 NOV 12 (NB) -- Sumitomo Chemical will resume production of epoxy resin in early December. Epoxy resin is necessary to produce memory chips, and the return of production means a worldwide shortage of memory chips may end soon.

Sumitomo Chemical has dominated worldwide production of epoxy resin. The supply was interrupted in July with an explosion at the plant. That led to a reduction in the general chip supply.

Sumitomo Chemical will not resume production of a 16-megabit DRAM yet. The company says it must await a report from the fire department and the police concerning the actual cause of the explosion.

Meanwhile, another chemical firm, Nippon Kayaku, says it will produce resin for 16-megabit DRAM. Its production line is currently under the construction.

Since the accident, most Japanese semiconductor firms have started to look for other materials to replace epoxy resin. But due to the costs, that search is expected to take some time.

(Masayuki "Massey" Miyazawa/19931112/Press Contact: Sumitomo Chemical, +81-6-220-3891, +81-3-3278-7000)

writes:
>>In article <2cges6$agf@eis.ctp.org> sadams@temp.ctp.org (Steven Adams) writes:
>>>I have noticed that my FT530 receives some of our local repeaters when it
>>>is tuned slightly off of the known freq. For example the 145.23 may come
>>>in a little better at 145.225 and 145.235. Any ideas??

I have an FT-530 myself. A suggestion might be to check and see that you don't
have the "AM Receive"" feature turned on by accident.

The frequencies you listed as examples are VHF frequencies. The 530 has an AM
detector that can be enabled on the VHF receiver. Quoting from page 35 of the
manual:

.."Press <FM> <SET> <FM> <PRI/VFO>, ("A3 ON" will appear), then press <SET> or
the PTT. This setting afftcts all reception on the VHF receiver, so *don't
forget to turn it off* for FM reception by repeating the above sequence ("A3
OFF") [will be displayed on the LCD display]."

The reason I bring this up is that the exact symptoms you described happened
to me on my radio. I'd let a friend play with the radio to see how he liked it.
When I got it back, it sounded "off frequency" on the VHF side. It turned out
that he'd accidentally turned on the AM receive function while trying to do
something else [Not all that diffucult to do for those not familiar with the
530's user interface]. Once I figured this out and turned it back off again,
all was back to normal...

Just my observations. Good luck.......

>I am considering buying the kit(s) for the Poor Man's Spectrum Analyzer
>from Science Workshop. Has anybody had any experiences with this unit (in either building or operating)?
>
I built one about 7 years ago and it did wahat it was suppose to do. The
guy who made hte kits was quite helpful on the phone. You don't see much
below a certain limit (I forget what maybe <10MHz) because of some inbuilt
limitation. Also you need to get ground and other loops our of the connection
to the CRO, or else your output is noisy. I haven't used mine for about 5 years now.
I really never did much with it becasue it never got into a box and at that stage
there was no easy way of telling freq (you had to get out your ovoltmeter and
do some things). There are improvemtns to the set up - someone has made
a better swawtooth generator and I believe there's a freq readout now.

4860. SUMMARY: PACTOR-2 recent information

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 18:01:44 UTC
From: khopper@coelostat.Sun.COM
Message-ID: <2dim68INNmnc@cronkite.Central.Sun.COM>
Source record: 273767

Anyone out there running PACTOR on HF ? Here is some VERY
interesting info. Please comment.

From RTTY Journal, September 1993 pg 16 article by KB8LUJ.

Peter, DL6MAA, sent the following from Germany. Work is well underway on
PACTOR-2. Here are basic facts on the new protocol:

o Timing and frames similar to PACTOR-1 (effectively half-duplex
ARQ)

o Based on standalone DSP-PTC using the 68070 and DSP 56156 (40Mhz)
chips.

o 2-tone-DQPSK at 75/150 Baud (perhaps 8-PSK at 100 Baud rather than
4-PSK at 150 Baud)

o Bandwith: less than 500Hz at -30 db

o Well suited to fluctuating multipath channels

o MaximumSpeed: 600 bits/sec (4X PACTOR-1, and 15X AMTOR)

o Improved adaptivity and Memory ARQ

o Superior weak signal performance (5-8 db better than PACTOR-1)

o Independent of employed sideband (same as PACTOR-1)

o Automatic frequency correction (plus/minus 70Hz)

o Downward compatible to PACTOR-1 systems

o Compresnsive listen mode (both PACTOR-1 and PACTOR-2)

o System is not 'over sophisticated' (can be implemented on any DSP
controller with enough processing speed)

o A standalone PACTOR-2 controller should be out by the end of
1993.

o AFSK will be required for PACTOR-2. This will have an implication
for those using 500 Hz filters. (apparently some rigs can't select a
narrow filter when in SSB mode)

Comments/suggestions on how to reach DL6MAA ?
Tnx, de N9VV - ken.hopper@Central.Sun.COM

Ask at your local public library. Almost all of them participate in the Interlibrary Loan service (ILL) and can get a photocopy of stuff from back issues of just about anything, anywhere. Usually free, or cost of postage/FAX.

Paul Marsh N0ZAU Omaha pmarsh@metro.mccneb.edu

> As I have stated, I feel that one of the major
> reasons for ham radio being as "clean" as it is, is accountability.
> Remove the accountability and the system WILL breakdown (as some falsely
> clain it has).

The system has broken down somewhat. When the FCC stopped monitoring amateur bands except in cases of gross misconduct, alot of what goes on today went on in much lesser amounts years ago. Today, someone can cuss on the air with little, if any, concern over what they've done. 15 years ago this was not the case.

> And it makes self policing almost impossible.

But Dan, only a ham-cop would be interested in self-policing. Self-policing means each ham polices themselves. (as some others have appeared to indicate.)

Source record: 273599
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

4865. US License Examination Opportunities Scheduled 11/29/93 to 2/28/94

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 18:45:06 UTC
From: bjahnke@arrl.org
Message-ID: <7419@bjj>
Source record: 273596

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60 (1994 test fee will be $5.75).

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

4866. Re: Modem Software to Alert Pagers-SUMMARY (Long)

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 18:47:11 UTC
From: miles@mbs.telesys.utexas.edu
Message-ID: <miles-011293124642@mac32.util.utexas.edu>
Source record: 273772

ORIGINAL POSTING:
>Our local Amateur Radio Emergency Service (ARES) group needs some software that could notify all our pager-carrying members when an emergency happens.

>Many of our members carry pagers for their jobs, and most of these are digital pagers. We need an application that would go down a list of pager phone numbers, dialing each, waiting until the phone is answered, then sending the TouchTones (r) for "14694". This number would be recognized by our members as meaning 146.94 MHz, the local ARES repeater frequency.

>Has anyone seen an app (for PC or Mac) that can do this? Thank you.

Here are some of the responses, with a surprise at the end.
*****

MULTI-PLATFORM SOFTWARE:

Hi there. KL7RH here..
I am the state ombudsman for Alaska and I use digital pagers at work to keep tabs on staff and such. We are using the Motorola Advisors. Love them!
I have also been using some software called NOTIFY! It is made by
Ex Machina
45 E 89th Street #39A
Ny Ny 10128.
It is great stuff. It will allow group messaging as well as very long alpha numeric messages to be sent Basically you set up a "phone book" that lets you define individuals even on multiple systems. You can then make groups of those individuals. They do have a forum on CompuServe and an 800 # but unfortunately I don't have either at the moment.
If you contact them tell them I sent you. They have been good to me as far as support.
*****

Regarding your quest for software to alert digital pagers for your local ARES group: for the Macintosh, there is a rather nice program called 'Notify!' published by:

Ex Machina, Inc.
45 East 89th Street, Suite 39-A
New York, NY 10128-0309
Phone: 718-965-0309
Fax: 718-832-5465

They can also be reached on America Online, if I remember correctly.

The program can be set up with various groups to be alerted with various messages, and can handle several different pager formats, including alpha-numeric.

Hope this helps...
*****

I think "Notify" for the Mac could do this. Notify may have changed hands,
but here is the info I have:

Notify
ExMachina, Inc.
New York, NY.
212-831-3142
*****

There are several packages that do this. Notify! from
Ex Machina knows pager protocols and can work through
the pager companies paging computer or call each of them
directly as a normal call. It can handle both numeric
pagers and alphanumeric ones. They have a version for
both the Mac and for Windows.
Ex Machina is at 45 East 89th St #39A,
New York, NY 10128

There is also a company called Information Radio Technology
in Cleveland at 800-228-8998. Bob Grohol also markets
several paging solutions there including one called
AlphaPage.
*****

PC SOFTWARE:

You can get a program called pager10.zip that might do the trick. It is
located on the OUBBS at 405-3256128.
*****

You can use Procomm a pc program that has dialing directories. It will
sequentially dial numbers from the list, going to the next if there is no
modem carrier received. A pager number of 555+1234,,,,14694 is entered. the
modem dials 555+1234 waits two seconds per comma then dials 14694 since no
modem tone is present the modem hangs up and dials the next number in the
dialing directory.

I use procom for windows and have setup macros to do similar call-outs.
*****

ANY PLATFORM:

Miles:
I _think_ I've got an idea that should work. I'm using Microphone II Pro on
my Macintosh computer, but I think the technique should work with any
communications software that supports scripting. The key to making it work
is the Hayes Command set dial modifier ";". The semicolon "is placed at the
end of the Dial command, causing the modem to dial the numbers entered,
then immediately return to the command mode without disconnecting."
Basically, what this means is with a semicolon at the end of the line, the
modem does not wait for another modem to pick up before allowing another

command to be entered. I played with this using my voice mail, which uses touchtones to login and enter the pass word. I was able to enter my extension, password, and logout right from my keyboard. The command sequence also requires the use of the # and * keys, so I also verified that these characters were sent, at least using my setup.

Here's what I think your sequence of events might look like:

atdt 5551234; dial the pager number and
stay in the command mode

OK command accepted by the
modem

Might need some type of
test to insure the other
end of the phone line is
a) not busy and b) picked
up

atdt 14694; Touchtone characters to
be sent to the pager

OK command accepted by the
modem

ath Hang up the phone

OK Command accepted by the
modem

atdt 5552345; dial the next pager
number and stay in the
command mode...

Anyway, I think you get the general idea. I don't have a pager to try this out on, but I think you should be able to get something working. One nice thing about Microphone II is it's "watch me" scripting capability. You turn "watch me" on and manually run through what you want the script to do. After you are done, turn off "watch me" and your script is complete. You can then script edit function to do any fine tuning, like adding additional commands for additional pagers etc.
*****

I think you could probably do something like this

send atdt <someone on the list>; semicolon is important modem response >
<CR><LF>OK<CR><LF>

now the hard part is how do you whether the paging service has answered?

look for busy or assume pager service picks up and is ready to receive
input after 10 seconds

send atdt <whatever>
send ath

We will be adding some sort of pager support and the idea of allowing someone to send out a given code to a list of pagers hadn't been considered, but it sounds like a good idea. I'll look into it.
***** *****

THE BOTTOM LINE:
At our ARES meeting last night, I learned how to do this at no cost and little hassle.

One of our ARES members had called the largest pager company in town. They said that they would set up a call group in their computer, so that all our members' pagers on their system would be notified simultaneously. _No charge_.

The member will be checking with the other (very few) pager companies in town, to see if they will also do the same thing.

Thanks to everybody who responded!

4867. IC2410/IC3230/FT5100 Comparison

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 19:22:11 UTC
From: levine@mc.com
Message-ID: <2diqt3$a7f@jericho.mc.com>
Source record: 273775

I am currently looking to by a new mobile rig.
I have done some feature comparisons that I
thought I'd share. I ruled out the Alinco,
the Standard, and the Kenwood current dual
banders for my own personal reasons. I ended
up narrowed down to the ICOM 2410, ICOM 3230,
and Yeasu 5100. This isnt a complete market
survey so no flames about rigs left out. Feel
free to add your own

ICOM2410 ICOM3230 Yeasu5100
Inband dual rx YES NO YES
Direct Freq entry YES NO No
Memories 36 30 94
CTCSS Decode YES optional optional
Remote Control optional optional NO
Autodial Memories YES YES NO
Rptr Monitor YES YES YES
800mhz mod avail YES NO NO
AM Aircraft mod YES dont know NO
extended RX uhf/vhf YES dont know NO
x-band Repeat YES YES YES

Again, these were only the features of interest to me.
Top priority for me were the mods, the autodial mems,
and direct freq entry. The 2410 has a very nice system
of frequency entry.

Accordingly, the radios with more features cost more.
The Yeasu was the cheapest but the 2410 had the most
features. Other useless things to me (like paging)
aren't included. Most of them had the usual bells
& whistles like CTCSS squelch, CTCSS encode, fans,
built in duplexor.

A while back someone posted the address of the ARRL information mirror ftp site.

Could someone either post it again, or send me the address. I am in urgent need of
some information.

Thanks

Bill

Hi!

The site is world.std.com, and the directory for the ARRL server files is:
pub/hamradio/arrl/Server-files

Good luck!

Scott

Yeah, everybody tells me it used to be a real test.....some people even tell me that getting a licence/callsign was for life....now we have pay money in every year.

Our system is starting to copycat the US...they are even taking our 220 band away from us to make peace with the FCC.

I doesn't show up in the study guide or on our tests up here. And, the current thought around here is that networks and newsgroups are lumped in as reference material (resources).

Especially with the project by our government to link all the schools in Canada to Internet....which includes the idea of providing a vast resource of information by people all over the world of Internet.

Also important if curriculum has to stay uptodate using a text book that won't

So, a SoundBlaster 16 ASP will do the trick? It has a DSP chip which can take downloadable routines.

I guess your using the term SoundBlaster was a generalization to all SoundBlasters and compatible *without DSP*.

Just checking.

4875. Re: using a radio off frequency in emergencies

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 21:42:10 UTC
From: greg@netcom.com
Message-ID: <gregCHDLMA.GMI@netcom.com>
Source record: 273783

The San Diego situation sounds like one which is suited to local, organized action, such as:

1) The County Sheriff is an elected official, and is thus rather susceptable to being told by the officers of local radio clubs just how many voters they represent. Similarly the local ARRL SCM and EC might remind the sheriff of how many voting ARRL members will be reading their reports on the situation.

2) If not persuaded by (1), County officials might be persuaded by the suspension of all amateur-radio public-service activities within the county.

3) If (1) and (2) don't work, a reminder of amateurs' contribution to recent disaster relief effort in Southern California, and a threatened suspension of ARES and RAcES activities in the County will probably call the appropriate attention to the department's sculduggery.

4) All actions should be accompanied by all of the publicity that can be mustered, and if possible brought up by a County Supervisor and various City Council types. Likewise, *every* official who is known to value ham radio's contribution should receive a "I'm calling to make you aware of actions which the amateur radio community may have to take if the County Sheriff continues down the path he is pursuing..." call from their favorite liason.

This is, of course, assuming that the RACES, ARES, ARRL, and club officials are convinced that the guy acted in good faith.

The idea here is not to weaken the actual emergency preparedness, but rather to do what volunteers must occasionally do, in order to be treated properly; make it clear that there are other things we can be doing with our time, if we're going to get kicked in the teeth.

Greg

>

Well, Steve, it looks to me as if something went amiss here. Usually, if an average citizen takes initiative and saves the life of another, he is usually hailed as a hero and appears on the local news and is a celebrity for a brief period of time. Sounds as if it did not happen this time. Seems like the Mayor of San Diego needs to find out about this incident. If I had been in the same situation, I would have not hesitated for a moment - sometimes in critical situations, moments count. Most of us (unless we are Doctors) are not qualified to judge the severity of injuries - sometimes an injury can be life threatening. It is much better to err on the side of caution and summon help. It sounds as if someone in the sheriff's office has his head screwed on backwards. Here in this part of Utah, we have a volunteer group that is constantly patrolling the mountains. Many people get injured and some even die in the mountains of Utah. These volunteers (some are hams) are equipped to communicate with whoever they need to to get help for an injured person. Someone should start a similar program in San Diego county. If a case like this ever got into a court, I would expect that the judge would throw the case out and require the sheriff to return the radio equipment to the rightful owner. That would be justice.

4877. new hams on repeater

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-01 21:48:15 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9312012148.AA01917@metro.mccneb.edu>
Source record: 273787

Minor excerpts from new ham on repeater thread:

>I never did understand why CQ on the repeater is frowned upon. Isn't
> it really the same thing when you say monitoring. Maybe CQ CQ etc
> doesn't sound quite right but what is wrong with W0MN on the frequency.
> I would apppreciate a call to chat.
>

One of our recent cultural failings is the apparent inability to say what we mean, rather than some euphemism or substitute therefor. "I'm monitoring" means "I'm listening" and does not necessarily mean I want to talk. If I want to converse with someone (anyone) out there, I should say so.

.....

>> "You know...I thought I heard a new ham in there...."
>> "Bet he7s a nocode....."

> I'd have said - "Hey a new guy, welcome in. Is this your first qso?"

If there was a hint of code-ism there, shouldn't you have said, "didididit didit dahdahdididahdah dahdahdit dididah dahdidahdah dididit didahdidahdidah" ?

Paul Marsh N0ZAU a real dit, himself.

You miss the point, it opens up an enormous posibility of fraud and abuse.
As a VE I strongly oppose the idea of instant licensing. Your argument that
you are granted temporary operating priveleges when you upgrade doesn't
hold water. Many amateurs who upgrade already have a good idea of proper
operating practices. If you allow instant tickets, that will change in a
very short time and it won't get any better.

I have had this problem. I believe that you have the AM detector turned on
and you are slope detecting the FM signal from 5KHz off center. Try pressing
the key sequence to get out of AM. Hope this helps!

Good Luck,
Brian - KD4BFJ

I had the same problem with my 440 on 10m & 15m. RF was getting into the
box via an external speaker wire and/or headphone wire. Ferite chokes on
both wires cured the problem.

Charles.R.Hohenstein.1@nd.edu (Charles R. Hohenstein) writes:

| The whole point is that this is NOT an electronics newsgroup, but rather a
| newsgroup for amateur radio operators, not all of whom have--or even need
| to have--a detailed understanding of how the equipment they operate
| actually works.

Call me a bigot, but I expect Amateurs to have at least one reference
book available (not necessarily belonging to him/her); at least, the
one they used to study for their ticket...

Again, asking "how do I calculate the SWR" here is akin to asking "what's
the pinout of a 555" over on sci.electronics (where all too often questions
like that are seen).

Of course, if the person who posed the question in the first place is not
an Amateur (I've lost the original) then naturally I withdraw the remark;
however, the Net is not a substitute for leg-work.

>
>I'll be in the British Virgin Islands for a week next month. I'm not
>planning on any HFing, but I was thinking of bring along a VHF/UHF HT.
>I was wondering:
>
>Will there be anyone to talk to? Repeaters?

Here are a few that I have listed:

Location Freq(+/-) Call Notes

St. Croix 146.910- KV4FZ
St. Croix 147.110+ NB2BF
St. Maarten 146.760- PJ7R
St. Thomas 146.630- W2IBJ
St. Thomas 146.810- KP2O
St. Thomas 146.950- W2IBJ
St. Thomas 449.700- W4UWH
Tortola BVI 146.730- VP2V

You could probably hit the Tortola repeater from St. John because the
Island is visible ~1-2 mi off the coast. A spectacular sight!

I talked with the Buckmaster folks about this at Dayton last year. They seemed lukewarm to the idea of an API, and to a Windows interface, but had no real commitment to do it from what I heard. The data is encoded in some wierd way, and they seem to want to keep it private.

The QRZ! CDROM from Walnut Creek has the data in a few different formats, and it is quite readable from programs. They've also released information on the indexing scheme they use for the DOS program and that info could be used to read the data directly. A Windows interface is rumored to be on the next version of the disc, and that next version is rumored to be almost ready to ship...

The QRZ! disc is cheaper and better (though it is domestic only).

4893. new MODERATED discussion groups on Amateur Radio Policy

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 00:01:52 UTC
From: bruce@pixar.com
Message-ID: <1993Dec2.000152.632@pixar.com>
Source record: 273812
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Two new _moderated_ internet discussion lists on ham radio policy have been created.

The lists are an attempt to hold a discussion on amateur radio policy with a higher signal/noise ratio than that in the rec.radio.amateur.policy newsgroup, or the packet ham-policy discussions. To prevent the the general policy discussion from being dominated by Morse-code-related topics, there are two lists: ham-radio-policy@pixar.com is for discussions of all policy topics _except_ for topics connected with the Morse code. morse-policy@pixar.com is for discussion of Morse-code-related policy topics _only_.

The intent of these lists is to air all viewpoints, but without the jammers and abuse that appear in rec.radio.amateur.misc .

To subscribe to either or both groups, send a message to LISTSERV@pixar.com . Include this text in the message:

SUBSCRIBE HAM-RADIO-POLICY YOUR-ENGLISH-NAME-HERE YOUR-CALLSIGN-HERE
SUBSCRIBE MORSE-POLICY YOUR-ENGLISH-NAME-HERE YOUR-CALLSIGN-HERE

You can leave out either group if you only want to subscribe to one.
The server also responds to the commands "HELP" and "INDEX".

This doesn't change the rec.radio.amateur.policy newsgroup, and it isn't related to the on-air ham-policy discussion or the internet reflector of that discussion called ham-policy@ucsd.edu that is run by brian@ucsd.edu .

Discussion will start when/if 100 subscribers have joined the list.

Dunno for sure about HAMCALL, but have you looked at 'QRZ Hamradio' from Walnut Creek? It's significantly cheaper ($20 as opposed to $50+ the last time I checked) and comes with a "reader" program, as well as the (C) source for rolling your own. Also, in a few weeks I'll have (will post somewhere, probably on Compu$erve) an ACCESS BASIC module that will look up the offset of a call and then return you all of the data for a given call.

I agree this is rude on a repeater. I have done this on a clear simplex
frequency however, usually when making antenna or feedline adjustments and
observing a meter. When I'm ready for a signal report I'll ask for one ;-)
Actually (and not to open another worm can) saying "KN6FQ Testing" on a
repeater is the correct procedure to follow for a pass/fail test, if all
you are doing is listening for the beep. Far better than simply kerchunking.

>normal operating procedures as well.

I must disagree with your contention that amateur radio is not a technical
service. It most certainly is. The primary difference between the amateur
radio service and all other services *is* the technical skills we're supposed
to be able to bring to bear for electronic communications.

Two of the purposes of the service are to advance the radio art and to
develop a pool of trained technicians. And all radio is electronics based,
so the skill sets we need are primarily electronic skills. Amateurs are
unique in being allowed to operate non-Type Accepted radios, in being
allowed to repair them, and in being allowed to manufacture novel circuits
for their own use. That certainly requires technical knowledge and skills.

As to the public service, emergency communications, and international
goodwill parts of our charter, the rules are clear that we are to act
as a *backup* to ordinary communications systems licensed for public
and emergency services purposes, such as GMRS, common carrier, land
mobile, and government. *Anyone*, amateur or not, is permitted to use

radio equipment in emergencies where there is an immediate threat to life, and there is no other means of communications available. We aren't unique in that respect. We are to bring our technical expertise to bear in situations where ordinary communications systems are overloaded, inoperative, or unavailable. In all other respects, we're to restrict ourselves to comments of a technical nature, or so unimportant that resort to common carriers is not warranted, IE Dxing.

Since the international treaties say our communications are to be either technical in nature, or unimportant, the exams stress only the important part.

4899. Reporting Constant QRM: who?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 01:19:31 UTC
From: randy@cyphyn.radnet.com
Message-ID: <1993Dec2.011931.21694@cyphyn.radnet.com>
Source record: 273806

For the past couple of years this one guy (who everyone knows) has
been causing malicious QRM on 80 40 10 and 2 meters...using others
call signs, doing everything possible to irritate everyone and daring
everyone to 'do somthoing about it' ... then proclaims we can not.

He now practically owns a local repeater, that a club has put a lot of\
time/effort/money into.. and we've run out of legal ideas to have him stop.

I don't wanna hear jazz about 'go pin his coax' ... go 'speak to him' ...
as he's been spoken to many many many times.... and when he was a CBer, the
CBers shot his antenna, roped his antenna, and someone cut out a 5 foot
section of his coiax, replaced it with black garden hose.... and he came back
for more, worse than before.

WHO do we send our logs of all his doings to?

Some of us have been logging all his qrming, and it's gotten to where it's time
to send this in to some one.

Do we send this to the ARRL...if so WHO? Can it be done via Internet?
Or by US Mail?

I've been asked to ask here, and will forward USFUL replys back...

tnx

73 (I hope)

>Gee, will wonders never cease? :-)

You'll be thrilled to note that I also agree that instant licensing, as proposed, is a bad idea. I do have an idea how to handle the problem that I'll mention at the end.

>> As I have stated, I feel that one of the major
>> reasons for ham radio being as "clean" as it is, is accountability.
>> Remove the accountability and the system WILL breakdown (as some falsely
>> clain it has).
>
>The system has broken down somewhat. When the FCC stopped monitoring
>amateur bands except in cases of gross misconduct, alot of what goes
>on today went on in much lesser amounts years ago. Today, someone
>can cuss on the air with little, if any, concern over what they've
>done. 15 years ago this was not the case.

In reality, the FCC never heavily monitored the amateur bands. The FCC did do somewhat more monitoring in the past, but that was for all services, not just amateur. They've slacked off mainly for financial reasons. One of the two broadcast monitoring vans in the country has been parked now for over a year because the engineers needed to run it retired and new ones were not hired. The language and behavior we hear on the bands, however, is more a reflection of changing community standards in society as a whole than it is a reflection of lack of enforcement. Even in the old days the FCC concentrated mainly on technical violations rather than content violations. But the general respect for authority in society was so much higher then that people acted as if Big Brother was watching even when he wasn't.

>> And it makes self policing almost impossible.
>
>But Dan, only a ham-cop would be interested in self-policing. Self-policing
>means each ham polices themselves. (as some others have appeared to
>indicate.)

You probably are being sarcastic, but you're right that self policing means the policing of *self* with respect to the rules. It doesn't mean playing cop wannabe. That's not to say that we shouldn't be good citizens

and report illegal activity we observe to the proper authorities. But just as we don't report every person we see going 56 MPH in a 55 zone, we shouldn't be zealous ham-cops on the bands.

Now here's my modest proposal to solve the instant license "crisis", and incidentally to solve the upgrade problem at the same time. Digital signature systems are now available that are as admissible as hand written signatures on paper forms. With the new computer system the FCC is getting, it should be possible to allow VEs to log on directly, transmit the completed exam information complete with validating digital signature, and receive an automatic callsign assignment in real time, including a Postscript license that laser prints just like the ones the FCC now mails out. This would be the real permanent license of the freshly examined candidate. The old paper mail system could remain in place for instances where the VEs are technically impoverished. I don't think those VEs would get many exam candidates after a while though.

To prevent hacking, public key encryption could be used in both directions with the FCC having a list of the public keys of all acredited VE teams.

4901. Standard C620 Xmit mod?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 01:34:06 UTC
From: stan@PROBLEM_WITH_INEWS_GATEWAY_FILE
Message-ID: <2djgme$lhq@hpchase.rose.hp.com>
Source record: 273808

I am looking for any info on how to get a Standard C520 (Japanese version of C628A 440/1.2 dual band HT) to transmit in the American section of the 440 band. It currently transmits from 430.000 to 439.995 (the Japanese 70 cm band) I have the mods to extend the receive (same mods as for the C528A) but the transmit mods for the C528A doesn't work. I have a photocopy of a photocopy of a fax of a photocopy of a page out of a japanese modification book that has the receive mods and what appears to be the transmit mod, but the copy is so bad that I can't make out the sequence (besides the fact that the instructions are in japenese :-).

I have contacted Standard USA and they don't have any documentation on the japanese version, and Standard in Japan will not support the radio outside of japan. (I think the radio was bought in Hong Kong).

Thanks for any help

Right. I don't know why people are still arguing about this - I have
no qualms in saying "Morse is an international language", although I
know that strictly it's not a language - but do we really have to care?
Much sloppier writing goes on around us every day (not just on r.r.a.m.,
but it's hardly exempt).

Morsum Magnificat (Aug 93) mentions a Brit newspaper (1943) as reporting
that a "dotty American" (tautology?) has his name tattooed on his legs
in more than 100 languages, including..... Morse code. That's certainly
not an authoritative source, but we all know what it means.

So - for those who care about all this, is sign language a language?
I doubt it, but nobody's about to change the name.

My TH78A draws only 0.25mA from its battery with the power off. If you
are using an external 12 volt supply there will be a 2mA drain due to the
battery charging circuitry with the battery pack removed.

4904. First Radiotelephone Broadcast

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 03:07:00 UTC
From: w.newkirk@genie.geis.COM
Message-ID: <9312020452.AA28529@relay2.geis.com>
Source record: 273815

Well speaking of first contacts...the following was attached to the door here tonight along with some pizza junk ads and other fluff from the building management....

The First Christmas Radio Broadcast

Christmas Eve in 1906, sitting at his radio in the mid-Atlantic, the ship's wireless operator could hardly believe his ears. Instead of Morse Code, he heard the strains of a violin, followed by a crackly voice that seemed to come from nowhere: "If anybody hears me, please write to Mr. Fessenden at Brant Rock, Mass."
The wireless operator had tuned into the world's first broadcast of a program of words and music. Thus was the beginning of radio telephony which could broadcast words and music by using continuous waves of sound. His radio audience consisted of professional radio operators on board ships or a shore stations monitoring navigation or military intelligence.
Fessenden's Christmas Eve concert was broadcast from a 420 ft. mast at Brant Rock, Mass. and has a range of 200 miles. In it he played the famous Largo from Handel's opera Serse on a phonograph, making him radio's first disk jockey, and a woman sang some festive carols.

-=-=-=-=-=-=-=-=-=-=-=-=-=-

so there you are. Truth or urban legend?

I have also been using Hyperlog and can second what Bob says. It also runs very well with SAM the callsign database. It will automatically add the name,qth,etc. when you enter the callsign or it also has a window that you can call up and just "look up" the info for a callsign w/o logging it. Upgrades are also free after registering, at least so far.

Hello netters,
(Particularly Penn State Students, Faculty, Staff, and Alumni)

This is a brief note telling all of you that the Penn State ARC is still alive. As the Vice-President, I am interested in hearing from some of you who are or were in the Penn State system. If you are a current student, or faculty/staff member, you can be a part of the Penn State ARC (PSARC). Contact me at my E-Mail address for info. (dcr117@psuvm.psu.edu) or via packet radio (n2oqn@w3ya.pa.usa.noam)

If you are an one of PSU's vast alumni, let me know how you are doing/what you are up to. We would all be interested in hearing from you guys, and sharing interesting college stories/ham radio stories at our meetings.

To let you know where the club is/has been going I'll tell you a little bit about the station...
We are running the following equipment:
Kenwood TS940S HF Rig
Kenwood TS820S HF Rig
Dentron MLA-2500B Linear
Heathkit SB-220 Linear
Mosley TH7DX 7 Element Tribander
Yaesu FT736R 2/440 Satellite Rig
AEA PK-232MBX for RTTY, Packet, etc...
(And other assorted stuff...)
Projects in the works are, completion of a 2/440 Satellite antenna array, replacement of a terminal for packet/data operation, antenna and tower maintainence, and other stuff... (I have probably forgotten many things...)

So, let me know what you guys are doing... Again, reply to this message, or send packet mail to n2oqn@w3ya.pa.usa.noam.

Thanks and 73,
Dan Raneri (N2OQN)
Vice President,
Penn State Amateur Radio Club

Sorry, won't happen.

If the ARRL can't even impose a national band plan, what makes you think they could impose national operating procedures?

(BTW, I consider their inability to impose a national band plan to be a feature, not a bug; if they could do so, we'd be stuck with a technically inferior plan on 2 meters.)

Actually, there is a very simple solution to this problem which I just now thought of. Why didn't I think of it before??

Is your AM detector on on your FT-530?
(Don't ask me about the display. I dunno.)
Tune to the offending signal (on frequency--not off) and press

F/M
0
F/m
(or VFO whatever it's label is)

See if that don't clear it up.

Hmm... a friend and I were trying to spec out how one would do this on the AV Mac DSP. Theoretically, it should be possible on any directly-programmable DSP (or at least one you can send custom filters to and receiver "pure" output at a sufficient rate).

On a similar note, has anyone taken the Baycom/PacketMac idea to its logical conclusion, and done the *whole thing* inside the mac? My friend and I were also spending some time specing out how would would do this on a mac via either the sound i/o or one of the serial ports. Anyone brew this one up yet?

From: smd2@aber.ac.uk
Message-ID: <1993Dec2.121251.12056@aber.ac.uk>
Source record: 273639

Hello and thanks for reading this.

I am a student in Wales (UK) and my dad and I are both licensed radio hams. As there are no packet radio op's around here, we use the Internet gateway N0ARY to communicate. This is an excellent service, however, if such a gateway exists in europe, I would very much like to change on to it, as it would shorten the time for mail to get to dad and would reduce the packet travel time, which is good for packet in general.

If such a gateway exists, I would be extremely grateful if you could mail me direct, at the following address :-

smd2@aber.ac.uk

Many thanks in advance of your replies.

Jack, if this is true, why are there DTMF, SSTV and Morse Code Decode shareware products available for hams ?

And the Voice Blaster (tm) product is out there and will allow the soundblaster to 'hear' and 'understand' voice commands (quite a complex mathmatical operation) in real time (and I'm fairly sure it DOES NOT require the ASP).

And I know a local ham that HAS written a RTTY decode program for the SB, but do not know if he is wanting to shareware or market it.

Food for thought.

SB QST @ ARL $ARLB115
ARLB115 222 MHz band changes

ZCZC AG57
QST de W1AW
ARRL Bulletin 115 ARLB115
From ARRL Headquarters
Newington CT December 1, 1993
To all radio amateurs

SB QST ARL ARLB115
ARLB115 222 MHz band changes

222 MHz band changes

The FCC has acted to expand privileges for Novice class licensees on the 222-MHz band as well as to create a subband for ''weak signal'' work on that band, in PR Docket 92-289, in response to petitions for rule making from the ARRL.

The changes will allow Novice operation in the entire 222-225 MHz band; Novices currently have access to 222.10-223.91 MHz.

In making its proposal to the FCC, the League said expanding Novice privileges to include the entire 1.25 meter band made sense since Novices already are permitted to use SSB and CW on portions of the HF bands, and there was no reason why they should not be permitted to utilize those same modes in the entirety of the 222-225 MHz band, where other licensees use those modes.

The FCC agreed with the ARRL, saying that it was a good idea to let Novices ''become proficient in a wider variety of amateur service operations,'' and to give them ''more flexibility in selecting the mode of transmission.''

At the same time, the FCC denied a proposal to allow Novices to be licensees and control operators of repeaters on both the 222 and 1240 MHz bands. The Commission had in fact proposed such privileges in its NPRM in 1992, but the ARRL argued against the idea, saying such privileges were not justified by the technical proficiency demonstrated by Novices on their examinations and that they would blur the distinctions between the Novice and Technician class licenses.

The League also proposed that a ''weak signal'' segment be established at the bottom end of the 222 MHz band, -- at 222.0 to 222.15 MHz,

similar to what previously existed at 222.00-222.50 MHz.

The League said its proposal was in response to amateurs' loss in August 1991 of 2 MHz of the band (220-222 MHz) to the land mobile service and that a weak-signal subband, which could not be enforced through voluntary agreements or formalized band-planning by amateurs, was necessary to allow amateurs to carry on experiments in propagation and operating techniques. The FCC agreed that this proposal had merit and acted accordingly.

The new rules are not yet in effect.

4919. Instant Licenses

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 14:20:57 UTC
From: biekert@vnet.IBM.COM
Message-ID: <199312021421.GAA02410@ucsd.edu>
Source record: 273646

Here are my thoughts on the 'instant' license proposal.
I am an Extra Class Ham, been licensed for 14 year, am a VE,
co-founder of our local club and our repeater trustee/licensee.

* Our monthly VE sessions bring in around 20 new hams a month,
all excited and eager to get on the air. When they realize that
they have to wait 2 to 3 months (or more sometimes) their energy
wanes. The instant license will get them on the air, get them
involved in club/area events, get them trained.

* Use of VE assigned callsigns will result in some confusion,
for instance both my wife and I are hams and have the same
initials. So what, is it a big deal to hear WZ5REB talking
to WZ5REB? Sure, you don't hear it now, but you never used to
hear AB5ZZ or KC5XYZ either and now it's commonplace. Plus
it will only be for 6 months (probably a lot less, like 2 to 3).
Again, no problem from my perspective.

* I can't tell what class these WZ# calls hold. HA! Can you tell
by my call (KA5GLX) what class I am? Hmmm, that's a novice call
isn't it. Yup, but I'm an extra! Oops, there goes that arguement.

* I can't verify who belongs to WZ# calls by calling the FCC. That's
true, have you ever tried to call the FCC to verify a 'real'
callsign? Good luck. There are some repeaters in town that refuse
to let the new Technicians use their repeaters until the call shows
up in the callbook. That's really a warm welcome to ham radio isn't
it. Guess the WZ#'s will face the same problem. Your choice. I welcome
everyone to use the KA5GLX/R repeater. If you are a ham with the
proper license, have a good time.

* What is a ham? Aha, maybe we have all lost sight of this. You are
a ham when you PASS the VE exams. You hold a valid CSCE saying
you have 'earned' your license. Therefore, why should you not
be able to get on the air? When you turned 16 and passed your
driver's license test, did you have to wait to drive until your
'real' license was issued from your state? You can kill someone
with a car... what's the worst you can do with a radio?

I think that many people over react to change, of any kind. Yes,
it would be nice if the FCC could let the VECs assign via computer
a 'real' call from the appropriate callsign group. That day will
come soon (so be ready!) This is a very simple method for letting
people ENJOY the privilages they have earned. Hey folks, there was
a time when you had to wait for the FCC to issue you a new license
before you could use your new privilages when you upgraded. How

many of you have upgraded and instantly been on your new HF or VHF frequencies with your old call?

I look forward to issuing WZ5XYZ at a future VE session and then hearing that person on the KA5GLX repeater. Welcome to ham radio. We are a friendly group of people just trying to have FUN!

We aren't disarming nuclear weapons here folks, we are just trying to enjoy our hobby.

This was also sent to me via e-mail and since I read the mail before the news,
I have to write it again...

How much did you spend on your phone? I live about 600 yards from the WWV
transmitter site and I don't hear them on my phone. My neighbors do, and they
set their clocks that way!!!

All to often the transmitter gets blamed. Occasionally, the ham is pushing
the amp a little too hard and splatters, but how does WWV run 50-500kW
and I'm still able to get SW stations 10 kc away with no interferance?
Either it's my radio (possibly) or WWV has taken the time to be sure their
signal is clean (more likely, I only spent $1k on the radio).

Consumer grade goods are made for one thing: PROFIT. If they can save a few
pennies on each unit by not putting a filter in, they do it, and you'll buy
it because it's a buck cheaper, then you find youself picking up the phone
to get the traffic report, no dialing required!!!

If you want to run 1 uWatt, go for it!!! Have fun, that's what it's all
about, but some of us like to be sure we can run 2kW in case someone's life
depends on it, and it's kind of a kick to know you can run that much power
and not start a fire or blow something up.

To each his own,
galen, KF0YJ

4924. TS440 Xmit Hangup

Bill,

I have had the exact same problem with my TS440 when I was attempting to test my beam while it was sitting on a ladder on top of the roof. It would lock into XMIT until I turned off the 440. After mounting the beam on the tower the problem has not reoccured so I just wrote it off as RF getting back into the radio.
Good Luck!

From various books including the History or Radio Broadcasting (3 volumes I believe) Fessenden is credited with the first real broadcast. He had developed a method of generating a signal on a specific frequency versus the hash from a spark gap generator. There was an article in one of the books regarding a river race which was covered by several competing radio developers of the time. Only Fessenden's signal was able to be heard through the hash being generated by all the other operators! I believe the ARRL handbook still mentions him as well.

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

{alternative to current proposal}

I am not opposed to the concept of an "instant license", simply the
instant license as it is currently proposed. Instead, this is what
I would like to see:

1. When you take a test at a VE session, you receive a
"temporary call" which looks as follows:

<Contact VE Callsign> /AT <sequential number>

So, for instance, if I am the contact VE for a VE team, any
"instant licenses" issued by my VE team will have my callsign,
plus a slash 'AT' followed by a sequential number. Sample: KD1HZ/AT243

2. Each contact VE will be responsible for maintaining their own
records as to who was assigned what sequential number. This way,
if I want accountability, I can call up the contact VE and ask
them who is using /AT245. This information can be maintained on
a simple ledger, or a computer database, whatever the VE wishes.

3. Contact VEs should never reassign an interim number. Once /AT245
is used, that's it. So, you'll always be able to find out who
was using that interim call.

This scheme corrects the major pitfalls I see in the current proposal.
It reintroduces accountability, traceability, and uniqueness.

It does create a little more work for the contact VE, but not much.
Maybe an additional minute worth of ledger maintenance per new
licensee.

The only other "pitfall" is that if you are licensing hundreds of new
hams each year, that eventually as a contact VE your /AT identifiers
are going to get really large. KD1HZ/AT12345 may be a bit much for
someone to pound out on a key, but nothing is perfect.

NOTE: The Effective Sunspot Number for 30 NOV 93 was 45.0.
The Full Kp Indices for 30 NOV 93 are: 2+ 1- 0+ 1- 1+ 2- 1+ 1-

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7624 (N04W28) was
responsible for three C-class flares including the largest of
the period, a C5/1N at 01/0419UT. This region grew rapidly and
also produced a number of B-class and subfaint flares through
the period. Region 7627 (S07E57) is also growing at a good pace
and produced a single C3/SF flare at 01/0705UT.

Solar activity forecast: solar activity is expected to be
low. Region 7624 and 7627 both have good potential for C-class
flaring and an outside chance of producing an isolated M-class
flare.

The geomagnetic field has been at quiet to active levels
for the past 24 hours at middle latitudes. High latitude
stations saw minor to severe storming during the last half
of the period. The activity is most likely the result of a
well positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to minor storm at middle latitudes and
minor to severe storm levels at high latitudes for the next 24
hours. Activity is then expected to be mostly unsettled to
active for the remainder of the forecast period.

Event probabilities 02 dec-04 dec

Class M 15/15/15
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 02 dec-04 dec

A. Middle Latitudes
Active 15/20/30
Minor Storm 30/20/20
Major-Severe Storm 20/20/20

B. High Latitudes
Active 20/20/30
Minor Storm 20/15/15
Major-Severe Storm 45/25/25

HF propagation conditions were not as significantly
affected during the day as was previously forecasted due to the
fact that the disturbance, which arrived near 12:00 UTC, failed
to produce anticipated levels of geomagnetic activity.
However, moderate to occasionally strong signal degradation was
reported over the night-sector high and polar latitude paths
with effects migrating as expected into the upper middle and
some central-middle latitude paths. MUFs have decreased by up
to 30 percent over many regions, with fading, multipathing, and
absorption common causes of signal degradation. Conditions are
expected to continue below-normal over the next 24 to 48 hours.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce

associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Well, gee Dan, I don't know *how* I could be wrong. After all, just
yesterday after mentioning that I personally check each new contact
I make in the callbook, etc., I was called a "ham-cop" with a penis
fixation.

In fact, after being shown the err of my ways, I've decided to write
a counterpart to "My Gun, My Penis - An NRA GunOwners Bible" called
"My D104 Lollipop, My Penis - A Ham-Cop's Overview of Regulating
The Amateur Bands".

> The Amateur
Auxiliary, Official Observers, Local Interference Committiees, et. al. The
> Amateur Auxiliary is responsible for maintance monitoring and amateur to
> amateur interfearance.

You *MUST* be kidding. Around here, these things either don't exist, or
they are next to worthless.

You know that the Rhode Island Section Manager and OOC does? Takes phone
calls from separated wives complaining about their husbands "talking about
them" on amateur radio. The SM calls the OOC, the OOC calls a *relative*
of the ham to "tell him to stop talking about her like that on the air".

THAT is what our League officials do in RI.

> That was 1982, where have you been? Policing yourself and ignoring the
> actions of others? If you are serious about wanting the situation to
> improve, get involved in the solution.

Oh, but Dan, I wouldn't *possibly* want to get involved. To do so would
prove that I have an impotence problem.

A buddy needs the 11C90 Prescalar Chip for the ARRL Handbook frequency counter design--it's the -only- thing left he hasn't got. He's checked what we feel are most of the "usual sources" (Jameco, MCM, etc., etc.) and they either "don't stock them anymore" or have run out and don't know if/when they'll ever get more. Even Debco here in town is "fresh out."

I've given him the "parts list" from the net but does anyone know a retailer/reseller who -HAS- this in stock, still? Thanks for any replies direct to me, or you can probably send the info direct to Jim, N8INP@K8SCH if this fits into the new rules...(-:

I'd like to get info about amateur radio clubs in and around the Pittsburgh
area (contact person/phone/address). also info as to what areas of
interest
each ARC caters to, what repeaters they operate, fees, benefits, etc.

will a (2 to 5watt) HT (using a different antenna other than the stock
rubber
dummy) be sufficient to use in the hilly terrain of the Pittsburgh area for
home and mobile use ?

please email replies if possible.
thanks in advance
Jerry

Subj: Radio Shack Inverted - V

Any HAMs out there know if Radio Shack's Inverted - V SW listening
antenna (pg 95 of 1994's catalogue only) can be loaded up on any of
the HF bands with an antenna and ground tuner? (My antenna tuner is
in a Pi network, if your wondering <HOME BREW, ALSO>). It lists it
for listening to 60, 49, 41, 31, 25, 21, 19, 16, 13, and 11<ewww>
meters. Overall length is 65 feet. $39.99

Please respond via this area,
Thanks

I have had one for about 8 months now and it has worked flawlessly. The
only problem (which has just surfaced) is that it appears to have some
dirt in a couple of the buttons and behaves somewhat erratically on two
functions.

Yes, we do, but I think part of that comes from the FCC's decision several decades ago to create "a band of frequencies where any citizen can communicate with another, without requiring license examinations", and the results of that decision. Sometimes change is BAD.

(Please don't flame if you're an ardent CB'er--we've got lots of fine hams in the local area who began that way.)

Otherwise, I think many of the points you make are good ones, and as a VE, I am always uncomfortable telling somebody, "Well, you passed your Tech exam, and you can get on the air...just as soon as your ticket arrives, in six to twelve weeks!" If some of the problems can be solved, or turn out not to be serious, I'd love to see an instant license.

4942. Radio Shack frequency counter

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 21:23:19 UTC
From: Hugh_E._Wells.El_Segundo@xerox.COM
Message-ID: <".2-Dec-93.13:23:19.PST".*.Hugh_E._Wells.El_Segundo@Xerox.com>
Source record: 273665

Now that the RS frequency counter has been out for awhile, has anyone had a chance to evaluate its performance?

I'm preparing to buy the RS counter and would appreciate any input from those of you that have used it. The kinds of data I seek fall into the categories of: frequency stability, frequency accuracy if better than 100ppm, sensitivity across the frequency range, random counting problems, battery drain or recharge rate when using nicads, and any application information that would or would not support the counter. Also, does the antenna connector lend itself for use with a preamp?

Thanks in advance

Hugh Wells, W6WTU

4943. ARRL Information Mail Server

The address for the ARRL Information Mail SErver is as follows:
info@arrl.org

Your first message to them should have these lines:
INDEXINDEX
QUIT

This will get you a list of all available text files. The index will be
delivered by E-mail in less than 2 hours. After getting the list of
filenames, your susequent requests would go as follows:
SEND filename
QUIT

"filename" is the name of the file you want. Request as many as you want
in the same E-mail request. Another command is:
HELP sends the help file

Some files available are: PROSPECT, EXAM-SCHEDULE, ADDRESSES, BIOEFFECTS, E
EMI-GEN, KITS, SOFTWRE, PRODUCT-REVIEW, FAQ-1, FAQ-2, FAQ-3, FTP-INFO,
MAC-STACK, POOL-EXTRA-1, AUTH-GUIDE, AWARDS, CONTESTS-93, FORM-10M,
PACKET-INTRO,QSL-IN, QSL-OUT, 10-10INFO, and many more.
Ed Hare, KA1CV , seems to be involved with this (ehare@arrl.org)

>someone to pound out on a key, but nothing is perfect.
>

How about doing this : KD1HZ/T(year)(number). So the first ham you license next year would be KD1HZ/T931. The 500'th would be KD1HZ/T93500. Or, if you wanted to keep the call signs shorter, use hexadecimal. (So, that 500th ham would have the temporary call sign KD1HZ/T931F4.) You would then be able to license 4,096 hams per year before the suffix became 7 characters.

Or, going further, how about simply using 1 digit from the year. Calls would repeat every 10 years, but if you make the temp. callsign only valid 10 years (like FCC licenses are now) and make them non-renewable, that should present no problem. So then that 500th ham would only need to use KD1HZ/T31F4. Much more reasonable.

I like it though. Simple and workable idea.

73,
Matthew (Waiting for my callsign - 4 weeks and counting)

You can't do it this way. (HINT: Ever wonder why /AT isn't used for technician upgrades?) Use AA instead. This sounds like an excellent way to maintain some accountability.

4951. Where do I find gorilla hooks?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-02 23:01:04 UTC
From: dale@sequent.com
Message-ID: <1993Dec2.230104.19591@sequent.com>
Source record: 273676

In the past all my tower work has been using a standard climbing belt. I recently did some tower work with a couple fellows that used a full body harness and belt. The also had a couple 3 foot ropes that hooked to the harness with a small clip at the harness and to the tower with what was called a "gorilla" hook. This is a large hook that is quite quick and easy to hook and unhook from the tower.

One of these guys worked for the city and said that the 'official' policy was that they could not free climb so they used these while moving on the tower and then belted in when they got to the working position. I've deciced that I'm going to give this technique a try. (Mostly due to breaking a wrist after falling 15 feet, and figuring that 150 feet would be at least 10X as painfull. :-) Fall was from roof and not tower related.)

I got a good body harness for $70 and now I want a couple of these 3 foot ropes and hooks. A place that advertises in QST sells them for $39 each. I'm having a hard time spending as much on two of these as I did on the body harness.

So I would like to find some place to buy just these hooks and I will attach the ropes. I have checked with two safety supply stores in town including the place that carried the harness. No luck so far, so does anyone know where to get these?

>stores in town including the place that carried the harness.
>No luck so far, so does anyone know where to get these?

I don't know where to get what you are talking about, but I have a
better suggestion. Go to a store which sells rock-climbing equipment,
and buy 2 "locking carabiners". These are d-shaped aluminum clips
which can be attached to a rope and clipped either to the tower, or
you can loop the rope around the tower and clip the carabiner back
onto the rope. They also have a ring which can be screwed over the
opening to lock them when you are at the top of the tower so they do
not accidentally unsnap. Last time I bought these, they were around
$15-20 each, and the ones I have indicate that their rated strength
before failing is in excess of 7,000 pounds. You may also want to buy
some "slings" which are pieces of 1 inch nylon webbing sewn into
loops. If you buy 2 of these of a suitable length and a third
carabiner to attach them to your harness, you can make quite strong
climbing "gorillas" (The slings also are rated at over 7,000 pounds
before failing). If you want more specific information, feel free to
drop me a note by e-mail.

That is what the index is for. Go and read the index yourself and then get what you need. Don't subject the rest of the network to this. It is not needed and waste time and space and LOTS of money.

In my case, I believe that a human life comes above all else. If it ment forking over my HT to save one, so be it. I believe it would be the _right_ thing. Now as to weather its the _legal_ thing, I'm not up enough on the laws to comment.

> me? No legal advice expected, just interested on what the folks on
> the net may have to say.

Do what you need to in order to save the life, otherwise you won't be able to look at yourself in the mirror in the morning.

just my 2 cents + gst + pst where applicable.

You might try one of the outdoor or mountaineering supply stores.
Personally I prefer tower climbing to rock climbing. If your hook is large
enough you can slide out on cross-arms to check antenna connections. The
hook should be a closed loop when locked.

The address for the ARRL Information Mail SErver is as follows:
info@arrl.org

Your first message to them should have these lines:
INDEXINDEX
QUIT

This will get you a list of all available text files. The index will be
delivered by E-mail in less than 2 hours. After getting the list of
filenames, your susequent requests would go as follows:
SEND filename
QUIT

"filename" is the name of the file you want. Request as many as you want
in the same E-mail request. Another command is:
HELP sends the help file

Some files available are: PROSPECT, EXAM-SCHEDULE, ADDRESSES, BIOEFFECTS, EMI-GEN, KITS, SOFTWRE, PRODUCT-REVIEW, FAQ-1, FAQ-2, FAQ-3, FTP-INFO, MAC-STACK, POOL-EXTRA-1, AUTH-GUIDE, AWARDS, CONTESTS-93, FORM-10M, PACKET-INTRO,QSL-IN, QSL-OUT, 10-10INFO, and many more.
Ed Hare, KA1CV , seems to be involved with this (ehare@arrl.org)

Additionally, don't forget that if you would like the same files in an
instant, you can get via anonymous FTP from world.std.com in the
directory pub/hamradio/arrl/Server-files.

The files are updated as often as the ARRL updates theirs.

73,
Scott

Would your program be available via anonymous FTP? I've seen the ads
in QST but wasn't sure if I'd like SSTV and didn't want to 'blow' the money.
I run the SB Pro on a Gateway 4DX2-66V.

Thanks,
Richard

If you are not willing to work within the system to come up with a soultion, then stop complaining about it. If you took the time to do any research on the subject, you would know the answer. Since your comments show an ignorance of the situation, rules and the FOB of the FCC's stated postion, I can only assume that you have no desire to improve the situatuion. How could you bitch about it if you helped solve it.

If you took the time to find out you would know that LIC's, after entering an agreement with the OOC and FOB can deal directly with the FOB.

If the state of the Auxiliary in your area is as bad as you say, it is the fault of the more experianced hams in the area that have failed in their responsibilites. (And ALL of THEM have at least 5 WPM code by the way).

From: dale@sequent.com
Message-ID: <1993Dec3.064648.13@sequent.com>
Source record: 273589

OK, I'm going to follow up to my post about looking for "gorilla hooks".
I have had some suggestions to use carabiners (sp?). I know about them,
and use them all the time. Really handy things. I use the locking ones
when I am tying something (perhps me!) in to the tower and that item
should not move often. When I unscrew the lock I mentally ask myself
if this is what I really want to be doing.

The "gorilla hooks" are just jused when running up and down the tower
and are used because they are really quick and easy to hook and unhook,
much faster than the carabiners would be.

So the search is still on. Who sells these things?

73, Dale.

>There's a commercial AM station more than 3 miles away ... I hear them all
>the time in my telephone (clear enough to pick out news, traffic reports,
>etc.)

As a ham, and particularly as a ham who occasionally has been known to
fire up the 4-1000A/833A rig and run 1000 watts of AM on the ham bands
(at least before the power law changed), I am appalled that another ham
would make this misinformed statement.

I used to be heard in things ranging from the telephone to the kitchen
oven, and there was absolutely nothing wrong with my transmitter or
the way I was operating it.

If a device that is not designed to pick up radio frequencies does in
fact pick them up, the fault is in that device... *not* the transmitting
device. If the device being interfered with *is* designed to pick up
radio frequencies (i.e. a tv or radio), the fault is not so clear.

Regards,
Keith (WA2Q)

VK2SG RTTY DX Notes, 3 December
VK2SG RTTY DX Notes for week ending 3 December 1993 (BID RTDX1203)

Received some very good news today. W5KSI, Angelo is home from the
hospital. God bless, and stay well. A special thanks to Angelo III,
N5UXT for assisting his dad throughout.

Our information this week came from 9X5LJ, DJ3IW and the DB0BCC
Cluster Node, I5FLN, N2DBI, W2JGR and the NJ0M Node Twin-Cities DX
Packet Cluster Network, W5KSI, and ZS5S. Thank you all for your
assistance.

Clue: RF rectification isn't the broadcaster's problem. It's the cheesy
unfiltered phone's problem. That's also often true of other cases that
are blamed on "splatter" or other transmitter malfunctions. The problem
is often really in the receiver of the one complaining. It's really really
rare for a broadcast station's transmitter to be dirty. It's even fairly
rare for a ham transmitter to be dirty. Unfortunately it's not so rare for
a solid state ham receiver to be dirty, especially if used in the presence
of high signal levels with the RF gain turned up.

The "gorilla" hooks are sold by Klein. Unless you really know
ropes, pay the money and get the Klein ropes and hooks already
assembled. Bending the rope to the hook is a non-trivial exercise
that if done wrong can get you killed.

>FT530. No problems with it in its first 4 months of life.
>Peter

!!Bad enough that Peter shyed away from Alinco on the basis
of the rumor-mill. I'm glad he is happy with his Yaesu; they
make fine products. Unfortunate that he felt the need to post
a negative comment on the Alinco _without_ any personal use!!

For the record: My house of hams has a DJ-160, two DJ-580's,
and a DR-590 mounted in my truck using the remote head kit.
We have dropped the h/t's, used them till the case filled with
rain water, drained the battery packs sequentially during long
days of public service work, and overheated the poor things by
using them in some pretty trying packet work (when our Kenwood
mobile rig used for packet gave up the ghost). They bounce around
in our vehicles without complaint and have never failed in use.
I've never gotten a bad signal report while using any of these
radios. Other than the unfortunate choice of placement of the
SCAN button on the DR-590, I have no operational compliants.

The above is all hands-on. And yes, I own other brands as well;
the original question was about the DJ-F1. I have used the F1;
a friend owns one and is very happy with it. Using his F1 helped
pursuade me to buy the DJ-580's for my wife and myself. My friend
is not alone in his satisfaction with the DJ-F1 as he convinced
some other hams to get the same radio.

It is unfortunate about the original poster experiencing a failure.
Electronic devices, radio and otherwise, are funny about that. I
could comment on failures I've personnally seen on other ham
rigs. That would also beg the question of the Alinco rigs. So far,
my personal use has been highly satisfactory; I have seen enough
other satisfied users to conclude I am not an isolated case.

Source record: 273612

Well, my Dad has asked me if he can use my Amiga with it's new digitiser
(Vidi-Amiga 12) to send Slow-Scan TV pictures over the airwaves.

At the moment he's using my old Sinclair Spectrum, but the Amiga can
produce nicer looking graphics and doesn't take five minutes to load
the program and another couple of minutes to load a picture from tape.
You can get Spectrum emulators for the Amiga, but there's no mic socket
on the Amiga to use with the program!

Anyway, any information on programs, any circuits etc.. appricated such exists -
I don't know whether I'll fully understand it but I sure my Dad will.

Thanks,

- Matt.

You're right, of course. I have other problems with that station,
which don't really bear discussion on the ham group, and just wrote
in anger after having heard their traffic report in my phone
having woken up on very little sleep to make an extremely important
overseas call. The moral of the story is not to get on Internet
without having slept at least 5 hours the night before.

Having explained RFI to my neighbors, and helped work to solve the
problems, I SHOULD know better. And I do.

Mea culpa.

I don't recall if I commented on this before, but the FCC regulations (Part 97) say something to the effect that if there is eminent danger to life or property, an operator is authorized to use _any means at their disposal_ to obtain assistance (emphasis mine). I am planning to look this up sometime, and will post a specific quote when I have one.

The state may have given me my drivers license when I turned 16 but
my *PARENTS* didn't let me take the *CAR* by myself for several weeks after..

Parents outrule the state :-)

I have nothing against a short wait between passing the test and getting
the license -- 1-2 weeks is OK but 6-8-10 weeks is bit ridiculous.

4983. From the horse's mouth Re: Emergency Communications

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-03 19:14:12 UTC
From: cravitma@cps.msu.edu
Message-ID: <2do364$hpb@msuinfo.cl.msu.edu>
Source record: 273626
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

To add to the current discussions about what is and is not permitted during emergency communications, here are the relevant sections from Title 47, Code of Federal Regulations, Part 97:

Section 97.403 Safety of Life / Protection of Property

No provision of these rules prevents the use by an amateur station of any means of radiocommunications at its disposal to provide essential communications needs in connection with the immediate safety of life and immediate protection of property when normal communications systems are not available.

Section 97.405 Station in Distress

(a) No provision in these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its location and situation, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a) of this section, of any means of radiocommunications at its disposal to assist a station in distress.

Hope this helps everyone.

I can see that the action of receiving the entire note back from each of the original recipients would create a real PYRAMID. That in itself is a pyramid scheme and the return volume should raise considerable attention by anyone having to pay for the activity.

So tell me, does the FCC recycle?

At one time, I was KA9PGU. Well, because of financial problems (I was
13 and my folks weren't into it, etc, etc, etc) I had to let my ticket
expire. (To avoid flames, Yup, I could have renewed, but I didn't...)

Ok, now KA9PGU is 'sitting idle.' At least as far as I can tell.
I know of at least 10 other people who aren't using their calls for various
reasons (and they probably won't.)

So, my question is: can't the FCC re-assign said call to new hams?

Just kicking an idea around...

When people ask about this I usually tell them that if they use the radio on police freqs directly that they should expect about at $10K fine (and to create considerable delaying confusion as the police try to figure out if it is a prank) but☐ if it's really a life at stake, I'm sure that that will not be ☐a consideration. If the fine is an issue, then they should consider all other methods first. FWIW

I have several pieces of equipment suitable for the prospective museum curator or nostalgia buff. These are free if you can get them from my place to yours. These include: a Model 19 TTY and one (maybe two) spare TDs. I also have two typing reperforators. I don't recall the model number, possibly Model 28. The last item is a McElroy Morse keyer. It sends CW practice tapes at continuously selectable speeds. It is a beautiful piece of mechanical workmanship. I think it was used by the military for training in the WWII/Korean conflict era. As I recall, it is the prettiest sounding CW that I've heard since taking my amateur exams before the FCC at their offices in DC and New York. The code to be sent is punched onto a paper tape approx. 3/8" wide. I have a typing perforator that goes along to do this.

All of these were in working order the last time I used them (that has been a decade ago). I hate to haul 'em to the city dump but they are occupying garage space that must be used for other things.

If you are interested, or know of someone who might be, let me know on the net, by e-mail or via my CBA.

I agree. One major question I have is:
(I mean I agree w/ the acceptable use of emergency comm out of
the ham band etc.)
back to the question:
Isn't it the cellular phone company's responsibility
to make sure their customers realize that their conversations
are NOT private- and that they CAN AND WILL be listened to? I
mean, really folks, congress just passed another law that saved
the big and powerful businesses (here the phone guys, other times
the coal/oil industries) a lot of money. If this law wasn't passed
poor little Mobile Link and Comm1 and all those other fellas
would have had to shell out Millions (maybe more) to make their
services more secure agains the general public. (Not to
mention that all the old cellular phones would be crap,
and that the new ones not only would cost more, but would
be a bigger). So, here we see congress helping little old us
the public by saving all the big phone companies the hastle
of having to tell their (not so smart users -not inclusive) that
the great new way of communication- cellular phones- is not
as secure as you may think.

I think that the mobile-phone companies should explicitly say
that the phone calls are easily monitored by an FM reciever.
I have heard many many things before on cellular freqs. (the on
thing that really supports my above sentence is that I onee
heard Name, Mastercard Number, and Expiration date all give
out on the freq. -come on folks!- how easy can you make it
for someone to steal from you?!?

(I never stole from them because I just enjoy radio communications
as a hobby and not as a way of life -although sometimes it may
seem like that ;)

(hope we don't feed the flame war too much, but talking
about it helps to ease the pain)

73's et TNX,
Allen Hall n9rzc@uiuc.edu

(I will try to keep up w/ any of the rest of this string,
but if anyone wants to post a question directly to me, please
e-mail me because I don't always get to nn between exams ;)

From: jfw@ksr.com
Message-ID: <36364@ksr.com>
Source record: 273622

sohn@apple.com (Phil Sohn) writes:
>I have a legal question about FCC rule 97.403. It refers to "these rules."
>Does that mean Part 97 or all or the FCC rules. (I don't have a copy in
>front of me, so I may be slightly misquoting.)

I would concur with everyone else; rules in Part 97 affect other rules in
Part 97 unless it has an explicit number attached to it.

>This is obviously in regard to the ham in San Diego who had his equipment
>taken away. There are so many conflicting views about the laws, I decided
>to read them myself. The sheriff's department keep quoting 90.47 which is
>about permits to use the land mobile system in remote areas during
>emergencies. Which does not really apply to this case since the ham did not
>have one of these permits. The ham refers to rule 97.403, which states that
>no part of "these rules" obstructs a ham from using any radio means
>available.

If that ham is attempting to justify his actions under 97.403, it sounds like
he has entirely failed to contact a knowledgable lawyer, a grave error if
the sheriff's department has or is planning to charge him with something,
and a serious error if he just wants his equipment back (:-). If there is to
be any legal justification for him, he'll probably find it in the
Communications Act of 1934; all 97.403 means is that having a ham ticket
does not prohibit you from using the right given to every other citizen to
use all means at your disposal to save lives. As others have pointed out,
local laws about ownership of unlicensed transmitters (which Part 90 probably
does *not* address) may mean that even if he can legally justify the
transmission they will still get to keep the equipment as a souvenir of his
public service...

4992. Re: Web page for Amateur Radio

>Please let me know by news or email!

I guess you mean "World-Wide Web." Being somewhat of a Usenet old-fogey
(on the net since Oct. 1990), I'm somewhat in awe of all these
newfangled techniques and information systems. Actually, I'm only 26,
but I'm already starting to get the sinking feeling that technology is
rapidly leaving me behind :-).

I just recently found out from the faq-maintainers@mit.edu mailing list
that all of the periodic information postings that are cross-posted
to news.answers are available via WWW. The URL (User Resource
Location?) entry is:

http://www.cis.ohio-state.edu:80/hypertext/faq/usenet.

For radio, this includes the following documents (offset from the
above):

radio/swap-guide
personal-intro
rec.radio.info
cb-faq

radio/ham-radio/faq
elmers
digital-faq
hams-on-usenet

I recently had the privilege of getting a walk-through of "Mosaic"
which is a WWW page viewer for Unix and X-Windows, by a WWW expert at a
recent meeting of the UNO Student Chapter of ACM. The radio FAQ's are
definitely there, albeit sans any internal "markup" that you describe.

So yes, there are some WWW "Pages," they just aren't fully marked up.
Speaking for the rest of the Ham Radio FAQ maintainers, we might be
amenable to someone taking these postings and converting them to
Hypertext Markup Language (HTML) to provide hypertext links to other
resources. Our major concerns are:

1. The work involved (which you volunteered to do)

2. Keeping the FAQ's readable in ASCII format (such as from news and ftp sites)

I highly recommend subscribing to the rra-wg mailing list (rec.radio.amateur Working Group) that encompasses all of the FAQ maintainers for amateur radio, plus other interested volunteers. Send an E-mail message to rra-wg-request@amdahl.com. I look forward to discussing the subject with you further.

>public service...

The ham in question was using a LICENSED transmitter. The transmitter
was licensed under Part 97.5(e), whether it was an IC-02AT, a type-approved
Motorola talkie stolen from a policeman, or an AM broadcast transmitter,
because it was operated in accordance with the FCC Rules (specifically,
97.403) and was a transmitting apparatus under the physical control of
the station licensee.
Disclaimer: I'm not a lawyer, but I wouldn't mind acting as my own if I
had to argue this before a Federal court. (Flames about the stupidity of
that directed to /dev/null.)

On Sunday, 12 December 1993, the Pasadena Radio Club will field a special event station to celebrate the rebuilding of the beautiful 80 year old Colorado Street Bridge over the Arroyo Seco just south of the Rose Bowl.

The station will be active from 10:00 a.m. PST (1800 UTC) to 4:00 p.m. PST (2400 UTC) on three bands:

21.335 MHz (+/-)

14.260 MHz (+/-)

147.150 MHz repeater (W6VIO) (+600 KHz, PL 131.8)

For a souvenir certificate, send a QSL and $1 to

NOTE: The Effective Sunspot Number for 07 DEC 93 was 48.0.
The Full Kp Indices for 07 DEC 93 are: 3- 1+ 1- 2- 5- 4- 3+ 4-

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7629 (S21W13) continued to simplify, producing two C-class flares in the process. A 17 degree-long filament disappeared from S39E32 early in the day. A prominence erupted from N13E90 during the latter part of the period.

Solar activity forecast: solar activity is expected to be low.

The geomagnetic field varied from unsettled to major storm conditions over the past 24 hours. This disturbance is occurring during what had been a recurrent quiet interval over

the past five months. It is not clear as to what transitory phenomenon caused the storming.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to active over the next 24 hours, as the disturbance wanes. Strictly unsettled conditions should end the period.

STD: Auroral activity was observed into the northern United States over the last 24 hours. Several reports of strong activity were received early in the UTC day, including color variations and rapid pulsations. Activity has since subsided substantially. Conditions are no longer visible over the middle latitudes.

Event probabilities 09 dec-11 dec

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 dec-11 dec

A. Middle Latitudes
Active 50/30/15
Minor Storm 25/15/05
Major-Severe Storm 05/05/01

B. High Latitudes
Active 45/35/30
Minor Storm 35/25/10
Major-Severe Storm 10/05/05

STD: HF propagation conditions were well below-normal over the last 24 hours. Strong geomagnetic and auroral activity produced a particularly strong corresponding ionospheric disturbance over the middle, high, and polar latitude regions. MUFs were depressed by up to 40 percent for high-latitude paths. This, combined with periods of strong fading, multipathing, and auroral absorption, resulted in near-useless propagation for transauroral and many transpolar circuits. Middle latitude paths also saw periods of strong signal degradation, particularly during the local night hours. Conditions began improving fairly rapidly after 18:00 UTC and are now well on the way toward reaching near-normal levels by the end of 09 December for most regions. Australian stations have reported periods of strong continent-wide VHF communications (including TV) on frequencies approaching (and perhaps in a few cases exceeding) 100 MHz, likely attributed to persistent sporadic-E.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY Amtor, Pactor and
Packet Radio.

This news is broadcast during the first full week commencing Monday each
month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. Mark. +/- for QRM.
RTTY on Monday-AFSK, Wednesday-AFSK, Friday-FSK and Saturday-AFSK.
Amtor-FEC on Tuesday and Thursday.
Morning transmission at 1000 GMT. on 7.041 MHz. Mark. +/- for QRM.
RTTY on Sunday-AFSK.

>From January 1994 the broadcast schedule will be adjusted to provide:
RTTY on Monday-AFSK, Wednesday-AFSK, Friday-FSK and Sunday-AFSK.
Amtor-FEC on Thursday and Saturday.
Pactor-FEC on Tuesday.

An edited version of this bulletin is available on the Packet network as a
BARTG @ GBR. file thanks to: Andy (G3ZYP) @ GB7BBS.#28.GBR.EU.
It is also posted on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU.
thanks to Iain (G6ARO) who is available on the "JANET" network as
Iain @UK.AC.HUMBER.

News for December 1993. Bulletin No. 012. (all times are GMT).

BARTG information.
AGM.
A well attended meeting again at this venue. The retiring chairman John Barber
(G4SKA) reported on good progress during his term and plans for future progress
to enhance the status of the group abroad. The treasurers report disclosed a
very sound financial position due to the endeavours of a hard working committee
for which the meeting declared unanimous appreciation. The task of updating
Beginners Guides for most data modes is well advanced following the publication
of the "BARTG Guide to Packet" produced by Ian Wade (G3NRW). As contest
manager, John Barber announced BARTG plans for the first world wide HF
Amtor/Pactor contest early in July 1994 which will undoubtedly further the
status of BARTG as the leading data group worldwide. The existing committee
were elected unopposed for a further term with the addition of Andy Matheson
(G3ZYP). The election of a chairman was deferred to the first meeting of the
new committee. Membership subscription is to remain at current levels for the
coming year due entirely to the success of the revenue income achieved by the
individual efforts of the committee serving the membership during the last 2
years. Membership must surely be the best value available for the services on

offer. DATACOM alone is worth more.
Ian Wilks (GW3FSW) volunteered his services to co-ordinate BARTG attendance at rallies. He will welcome all offers from members available to staff the BARTG stand at their local rally in 1994.
A very successful meeting to close a very successful year.

Contests.

New address for the WAEDC contest logs:
WAEDC Contest Committee. P.O. Box 1126, D-74370 Sersheim, Germany.

Some late notice of a RTTY Sprint contest which may be of interest:

The Troy Amateur radio Club (TARA) announces its second annual RTTY Sprint. The contest period this year will be from 2100 UTC. 11 December 1993 to 0100 UTC. 12 December 1993. Work stations once per band. One point per QSO. States and DXCC countries are multipliers. Bands are 80, 40, 20, 15 and 10 meters.
Logs must be submitted by 17 January 1994 to:
Bill Eddy. NY2U. C/O TARA 2204, 2nd Street, Troy, New York 12180.

SARTG have their Happy New Year RTTY contest from 0800 until 1100 Saturday January 1. Bands 3.5 and 7 MHz. only.
Classes are..
A) Single operator.
B) Multi-Operator.
C) Short Wave Listener.
Exchange message..
RST + QSO serial number + name + "Happy New Year" in own language.
Points..
One (1) point for each QSO on each band. The same station may be contacted only once on each band.
Multipliers..
A multiplier of one (1) is given for each DXCC-country (except Scandinavia) and each LA - OH - OZ - SM - TF prefix number (0-9) contacted on each band.
Final score: Sum of QSO points times sum of multipliers.
Logs to be received by January 21 1994 containing: Band, Time GMT, Message sent and received, Points and Multipliers. Use a separate sheet for each band and enclose a summary sheet showing the scoring, class, your name and address. Logs from multi-operator stations must contain the calls or names of all operators involved. SWL's use the same rules but based on stations and messages copied.
Address your logs to:
SARTG Contest Manager. Bo Ohlsson SM4CMG. Skulsta 1258,
S-710 41 Fellingsbro, Sweden.
Awards to the top five stations in each group and to the winner in each country.

On the same day the ARRL RTTY-Roundup starts at 1800 January 1 until 2400 January 2. Operate no more that 24 hours. Two rest periods (for a combined total of 6 hours) must be taken in two single blocks of time, clearly marked in the log.
Modes: Baudot RTTY, ASCII, Amtor and Packet (attended operation only*) (I would presume Pactor will also be allowed Ed.)

All 5 HF bands 3.5 - 7 - 14 - 21 - 28 MHz.
Classification:
A) Single operator all band.
1. Less than 150 watts output. 2. 150 watts output or more.
B) Multi-Operator single transmitter.

Exchange message:
For United States: Signal report plus state.
For Canada: Signal report plus province.
For DX: Signal report and serial number starting 001.

Scoring:
(A) QSO points: Count one point for each completed QSO. A station may be worked once on each band for QSO credit.
(B) Multipliers: Count only once and not once per band, each US. state (except KH6 and KL7), each VE. province (plus VE8 and VY1) and each DXCC country. KH6 and KL7 count only as separate DXCC countries. The USA. or Canada do not count as DXCC countries.
Logs: An entry making more than 200 total QSO's must submit duplicate check sheets (an alphabetical listing of stations worked). Logs should show dates, QSO times, call sign of station worked, complete exchange sent and received for each contact, and band. Postmark your entry within 30 days after the contest ends.
Send to: ARRL Contest Branch, 225, Main Street, Newington, CT 06111.

Notes of interest.
The station in Sarh, Chad TT8OBO is now being operated by Al (KL7QH).
John in Dubai, U.A.E. is QRV both RTTY and Pactor as A61AF.
The DXCC desk announced that QSL cards from A61AF for operations prior to August 3 1993 are not good for DXCC credit as operations before that date were unauthorised. All who submitted cards prior to November 16 1993 must re-submit as all credits have been removed from the database. Only cards with QSO dates after August 3 1993 will be accepted.
Prefix hunters will notice the calls YL75V and YL75Z being used to commemorate the 75th anniversary of the foundation of the Republic of Latvia (18th November 1918). The Latvian buro is not functioning so QSL's may be sent direct as above.

Thanks this month to..
G3ZYP, G3MWH, DXNS, ARRL/ARLDX.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

> the new system, i.e. we can still take take the 13wpm test and be
> upgraded.

That is correct. As long as *you* can prove you held
a valid Technician license prior to 3/21/87, the only
requirement (to upgrade to General) is 13 WPM.

> However, when I recently received a new liscense in the
> mail (just a replacement for the old one, which was lost), there
> was no designation that I could see that would set my lisense
> apart from any other (newer) tech liscense.

There is no different designation. An expired license,
issued prior to 3/21/87 is acceptable proof. A copy of
that license must accompany the upgrade 610 as well.

Message-ID: <9312091345.AA02134@hammer.atd.mke.ab.com>
Source record: 273521

gee jeff,
i can't imagine someone that actually has had a ticket for as long as you say you do, and at least an advanced ticket at that, asking how to get a ts450s modified to tx on 11 meters. as we all know, the ts450 isn't type accepted to operate on 11 meters. it can and most likely get your friend in trouble with the fcc to the tune of about $10,000 for operating this rig on 11 meters, just like the other hams that have gone and operated on 11 meters with ham equipment in recent memory. keep your flame war to yourself and just hang out at truckstops and just buy an 11 meter linear if your have to have one.

>to feed a bureaucracy responsible for removing them such that people are
>categorized into a class from which there is no possibility of escape - all
>white people are racists, all black people are criminals, etc.)

Well, gee, Bill. Let's see how the editors of QST feel about buying up
the rights to the old Scratchi columns and publishing an anthology, okay?

You're making it up as you go along.

Nobody (other than yourself just now) suggested that we pretend as though
Scratchi didn't exist. On the contrary, Myron has posted it (probably to
make a legitimate point), and I have suggested that the material needs
to be dealt with in context because, racially charged material, it
carries the risk of being controversial for reasons far different than
its original intent.

I haven't suggested not posting it. I *have* suggested that someone
with a European name might be better off confronting and acknowledging
the issues it raises themselves. First because someone else probably
will, resulting in a flame war (which I consider infinitely preferable
to silence) and second because it may quietly offend someone who
happens to encounter it. The latter is really only a problem, by the
way, because no offense was intended.

I make no apologies for offending some of the illiterate, anti-intellectual,
jingoistic ignoramouses who have been respondants on this thread. And
if my suggesting that you learn to read offends you, so be it. It least
you managed to get one thing right.

>that's basically it...and it's funny too (since i've also done instructing and
>have had similar situations happen even to this day..). not everyone speaks
>good english.....and how else would you represent this in written text?

Go deeper. It's not the accent. It's the whole caricature. You know this,
and it's disingenuous of you not to acknowledge it. It is not merely
Scratchi's accent. It goes from his name, to his mannerisms, to the
way he is often drawn. He is an ethnic stereotype.

But even further... ...there's no need of it. W6ISQ made some great
points without resorting to constant stereotyping (though I'm sure

there is a counter-example; it was, after all, decades ago). And
it's not something we do now, in publishing. DID IT EVER OCCUR TO
YOU THAT THERE IS A VERY GOOD REASON WHY?????

>i'd suggest spending a day in a library with old mags of the time. i suspect
>that by and large we suffer from having too many hams that are too prim and
>proper and fear that even seeing a beer will cause one to fail a breath test.

Yes, and back then we suffered from having too many hams who wouldn't
drink in the same bar with a 'colored man.' So what's your point? Male-
bonding?

>and don't read things like the old Popeye's. Segar had to make him a "blastid
>gentlemin" under orders from the syndicate. Disney's "Fantasia" is out as are
>a lot of films from the 30's and 40's some might consider "classic".

Read them. Enjoy them. Rudyard Kipling still makes damn fine adventures.
On the other hand, make some effort to disassociate your attitudes from
some of the ones expressed there. Especially as writer.

Greg

>offended before we send Myron away.

Gee, let's make sure that someone will really get hurt before we
yell 'fire' in a crowded theatre.

Why are you suggesting that we send Myron away? Don't you care anything
for the First Amendment? You must not, since you're the first one who
suggested it.

>All this political correctness is enough to make one puke.

So you're saying that you're so uncomfortable with the ideas presented,
and so unable to cope with them intellectually that it makes you ill?

Sort of an odd way of having to learn, but whatever works for you.

| FEATURING A PC PRIMER AND REVISED PC LEXICON |
| |
| By Saul Jerushalmy & Rens Zbignigwiuw X. |
| |
| COPYRIGHT 1992 - All Rights Reserved |
+---------------------------------------------------------------------------+
```

"...In order to forge a cosmic accord of unprecedented unity and
harmony, The Politically Correct Movement demands that all people,
regardless of prior social preconditioning must accept the incipient
world order that will offer unlimited bliss and contentment. Dammit."

- Prof. Dr. Skippy "Tiang-Min" Whitmore
Berkeley CA, 1965

PC PRIMER

Q: WHAT IS P.C.?

PC stands for Politically Correct. We of the Politically Correct
philosophy believe in increasing a tolerance for a DIVERSITY of
cultures, race, gender, ideology and alternate lifestyles.
Politically Correctness is the only social and morally acceptable
outlook. Anyone who disagrees with this philosophy is bigoted,
biased, sexist, and/or closed-minded.

Q: WHY SHOULD I BE PC?

Being PC is fun. PCism is not just an attitude, it is a way of life!
PC offers the satisfaction of knowing that you are undoing the social
evils of centuries of oppression.

Q: I AM A WHITE MALE. CAN I STILL BE PC?

Sure. You just have to feel very guilty.

Q: WHY?

If you are a white male, your ancestors were responsible for practically every injustice in the world- slavery, war, genocide and plaid sportscoats. That means that YOU are partially responsible for these atrocities. Now it is time to balance the scales of justice for the descendants of those individuals whose ancestors your ancestors pushed down.

Q: HOW?

It's simple. You've got to be careful what you say, what you think, and what you do. You just don't want to offend anyone.

Q: YOU MEAN I SHOULD GUARD AGAINST OFFENDING ANYONE?

That's right. Being offensive is destructive, and will not make the world a harmonious utopia, like in John Lennon's IMAGINE.

Q: HOW ELSE CAN I BE PC?

Oh, there are lots of ways. For example, why buy regular ice cream when you can buy "Rain Forest Crunch?" Segrega..whoops..separate all of your garbage into different containers: glass, metal, white paper, blue paper, plastic, etc. Make sure that all your make-up has not been tested on animals. Try to find at least sixty ways to use your water; when you take a shower, brush your teeth at the same time. Then don't let the water go down the drain, use it to irrigate your lawn. Or better yet, replace your lawn with a vegetable garden. Don't use aerosol. And by all means, don't burn or deface our flag. Remember, as a citizen of the United States, your living in God's country.

If you are fortunate enough to know your ethnic heritage, dress the part! Don't do drugs. You should listen to at least one of the following PC musicians: U2, REM, Sinead O'Connor, Sting, or KD Lang.

Harrass people who wear fur coats. Remind them that an innocent baby seal was mercilessly clubbed. Or just yell, "FUR." They hate that. And don't EVER eat meat.

Q: DON'T EAT MEAT? WHY NOT?!

Cows are animals, just like humans are animals. That means that they have rights. When you eat meat, you're oppressing animals!

Q: SO ALL KILLING IS BAD?

No, not always. Sometimes killing can be justified, like in the Persian Gulf. You have to be able to tell when an animal has rights, and when it doesn't.

Q: HOW DO I KNOW WHEN AN ANIMAL HAS RIGHTS?

The general rule is as follows:

IF AN ANIMAL IS RARE, PRETTY, BIG, CUTE, FURRY,
HUGGABLE, OR LOVABLE, THEN IT HAS RIGHTS.

Examine the following chart:

RIGHTS	NO RIGHTS
cows	cockroaches
cute bunnies	flies
dolphins in tuna nets	tuna in tuna nets
whales	sharks
red squirrels	gray squirrels
owls	loggers
harbor seals	barnacles

Q: WOW. WHAT ELSE CAN I DO TO BE PC?

Hug a tree. Rejoice each day in our cultural differences, for they are what gives flavour to our great country. Get in touch with your sexual identity. Check your refrigerator for freon leaks. Subscribe to National Geographic. Search it for neat non-Western cultural traditions and costumes. After you read it, use the paper as an alternate fuel source.

Q: I'M NOT SURE ABOUT ALL OF THIS.

If you are feeling unsure about your motivation, just remember. YOU ARE RIGHT. It's that simple. You are right.

Q: HOW DO I KNOW IF AN ACTION IS UN-PC?

Good question. It's important to know when someone is saying something insensitive so that you can have that person removed from society. The guideline is as follows:

Is the confrontation between two white people?
Yes -> The liberal is right.
No -> The white person is oppressing the ethnic person.

Remember, many seemingly obvious issues, such as the railroading of Mayor Marion Barry, or the Clarence Thomas issue, are really race issues.

Here's a fun practice drill for you: See how many newspaper articles you can make into race bias stories. It's fun! Some PCers are so good they can make the weather report look like a KKK pamphlet!

Q: WHAT SHOULD I DO IF I SEE SOMEONE DO SOMETHING NON-PC?

It all depends on the situation. If you are not in a position of authority, by all means report this activity immediately to whomever is in charge. If your school leader, employer, or superior is hip to the trend of the 90s, she or he will take the necessary steps to have the insensitive offender disciplined.

Q: BUT ISN'T THAT CENSORSHIP?

The Constitution never meant for racism, sexism and insensitivity to be espoused by anyone. That's not what free speech is about. Some call it censorship. PCers call it "selective" speech. Saying something negative about a particular race or gender is just as damaging as, say, punching them in the face. We just can't allow that kind of verbal assault.

Q: I'VE HEARD A LOT ABOUT PC WORDS TO REPLACE "BLACK," "INDIAN." ETC.

Yes. That's part of the PC movement. You see, part of the way we think about people comes directly from the words we use to describe them. Take "black" for instance. Why should a person be judged by the color of their skin?

Q: YOU MEAN THEY SHOULD RATHER BE JUDGED BY THE CONTENT OF THEIR CHARACTER?

No, I mean they should be judged by where their ancestors are from. If your great grandparents are from Africa, or Asia, or wherever, then you should be identified by that fact. You can even apply for special scholarships!

Q: I'M A MIXTURE OF FRENCH, GERMAN, ENGLISH, AND RUSSIAN. CAN I GET ONE?

No, there are no scholarships for any of those. Sorry. If you are a woman, however, there should be plenty.

Q: HEY, WOULDN'T A WHITE PERSON FROM LIBYA OR EGYPT TECHNICALLY BE AN AFRICAN-AMERICAN?

Technically, yes. But that's not the kind of African-American we mean. That is, we're REALLY talking about skin color, but we're pretending that we aren't. Another example: A white South-African U.S. immigrant is not an African-American either.

Q: HOW CAN I LEARN TO MAKE MY LANGUAGE MORE POLITICALLY CORRECT?

For more help, see the PC LEXICON at the end of the handbook.

Q: I'D LIKE MY CHILD TO BE PC. WHAT CAN I DO?

Well, for one thing, we should forcibly encourage students to volunteer their time with philanthropies. Also, we should re-emphasize non-Western perspectives on history. Finally, we should re-structure tests and quizzes to reflect cultural biases.

Q: I DON'T GET IT.

Well, the way the system works now, "select" under-represented minorities who tend to do worse on entrance tests have lower standards of admissions at school and work and receive preferential treatment. This is unfair and wrong.

Q: IT IS?

Yes. The truly PC way to do it is to have a different grading scale for different groups which gives or subtracts points from the final score, depending on who is taking the test. If you are white, then you have been benefited by society during your life. That means that you lose ten to fifteen points to make the test fair to everyone else.

Q: I GUESS THAT SOUNDS RIGHT.

It IS right. That's the beauty of PC.

Q: WHAT ELSE DO I HAVE TO BE CAREFUL OF?

Humor. PC people take every comment VERY seriously. We will not accept any comment, joke, remark, or anything that sounds like it could be a racial slur.

Q: GIVE ME AN EXAMPLE.

"What's black and white and red all over?" has been staple humor for decades. Not PC- It can be taken the wrong way.

In every day speech, try to use phrases like, "Isn't that the pot calling the kettle African-American." Any racial jokes or jokes even mentioning culture or gender should be omitted. True, this mostly limits comedy to the level of sitcoms, but that's the price you pay for social equality.

Q: IS THAT ALL THERE IS TO IT?

Yes. The Politically Correct belief is essentially a recognition that people are diversely equal. We rejoice in this equality by treating people differently based on their equal individuality. Hop aboard the bandwagon... Be PC. Or you're an intolerant, racist, sexist insensitive pig.

PC LEXICON

"Insensitive Term" "Preferred Term"
------------------ ----------------

-> ETHNICITY <-
(PC people do not recognize the term, "race," as valid)

Black - African-American
(NOTE: DOES NOT INCLUDE
LIBYANS, EGYPTIONS, WHITE S-AFRICANS.
DOES INCLUDE
PEOPLE WITH DARK SKIN REGARDLESS OF
WHERE THEY ARE FROM OR WHERE THEY LIVE.)

Oriental - Asian-American
(NOTE: NOT CONSIDERED "REAL" MINORITIES

SINCE THEY TEND TO DO WELL)

Indian - Native-American
(NOTE: THE FOLLOWING TEAMS ARE NOT PC:
Atlanta Braves
Cleveland Indians
Kansas City Chiefs
Washington Redskins
AVOID THESE CITIES!!!)

Chicano - Hispanic
(NOTE: THE FOLLOWING ARE NOT PC:
Cheech and Chong
Chico and the Man episodes
Cisco Kid
Rosarita Salsa
Speedy Gonzales
AVOID! AVOID!)

Towel Head/ Ay-Rab - Arab-American

White Trash - PC Unaware
Rustically Inclined

WASP (white male) - Insensitive Cultural Oppressor (ICO)

-> GENDER <-
(PC people don't like the word "sex" as it has confusing connotations)

Woman - Womyn, Vaginal-American

Girl - Pre-Womyn

Housewife - Domestic Engineer

Fireman - Firefighter

Stewardess - Flight Attendant

Meter Maid - Parking Enforcement Aduciator

Post Man - Post Person

Mail Man - Person Person

Policeman (cop, pig) - Law Enforcement Officer
Baton Boy
Cal. Clubber

Prostitute - Sex Surrogate
(Teen Victim. See: Broken Home)

Mankind, Human - Earth Children

-> PEOPLE : SUB-GROUPS <-

Handicapped - Differently Abled
Handi-Capable
(Blind - Optically Darker
Photonically Non-receptive
Deaf - Visually Oriented)

Poor - Economically Unprepared

Bum - Homeless Person
Displaced Homeowner
Philosophy Major

SOCIALLY INTOLERABLE WORDS (SIWs)

These are some, but unfortunately not all, words that are used to describe people. Remember, there are much more eloquent PC ways to say the same thing without offending any of Earth's Children.

DO NOT USE THESE WORDS.
(except when telling other people not to use them)

IF YOU HEAR ANYONE USE THESE WORDS, REGARDLESS OF CONTEXT, RESPOND IMMEDIATELY:

"Alky, Babe, Beaner, Bimbo, Bitch, Blonde, Broad, Bum, Canuck, Chick, Chink, Coolie, Coon, Commie, Crip, Dego, Dike, Dot-head, Druggie, Fag, Fairy, Four-Eyes, Fudgepacker, Greaser, Hebe, Hippie, Honky, Hooknose, Indian, Injun, Jap, JAP, Jesus-Freaks, Kike, Kraut, Lez, Lush, Nazi, Nigger, Pinko, Pollock, Raghead, Redneck, Redskin, Retard, Ruskie, Skirt, Spic, Tart, Toots, Uncle Tom, Whore, White-Trash, Wop"

READING THIS LIST MADE YOUR SKIN TINGLE WITH REVULSION, DIDN'T IT? IT BETTER HAVE.

THE ABOVE ARE FULSOME TERMS. PC DOCTRINE STATES THAT ALL REFERENCES TO THESE WORDS BE DELETED FROM EXTANT PRINTED MATERIAL AND CONVERSATION.

/--\
| SPECIAL UPDATE: March 1992 |
\--/

This manifesto was originally released in December of 1991. Within hours of becoming public, the authors were deluged by responses on the

computer network from several countries including the U.S., Canada, Australia, and Germany. One eager, though slightly deranged, earth child even wrote a line-by-line commentary on each facet of PCism.

The following is a partial list of comments:

I enjoyed it immensely, even though I confess to being a member of several of the groups that it pokes fun at. Anyway, I was a bit surprised that the PC Lexicon didn't include my favourites:

dead persons of reduced metabolic activity
biologically challenged

obese differently weighted
people of mass
gravitationally challenged

Perhaps the author(s) might want to include them in some future edition ...

I must express my displeasure with your callous references to "dead people" in the PC Lexicon. These individuals you so readily dismiss are in fact the oppressed victims of a most tragic condition, Global Systematic Biological Dysfunction Syndrome. On behalf of myself and generations of other PWGs (People With GloSBiDS), I request that you recognize the term we prefer to be called by and act accordingly. Thank you.

You forgot to add these:

Old Politically Correct
---------- ------------------
Police State War On Drugs
Depression Temporary economic downturn
War Defense
Civillian deaths Collateral damage
Tax increase for the poor Tax cut
Cutting taxes for the rich Stimulating the economy
feminists feminazis
environmentalists tree-hugging enviro-fags
Right-wing moderate conservative
moderative conservative Liberal
Capitalist economic reforms Democratic reforms

Hey screwy, quit putting liberal crap in this newsgroup. That's all we need, a liberal bastard touting the merits(ha-ha) of PC.

PC actually means Prick of the College, which is what you will be when you endorse PC.

Environmentalists, animal rights, feminists, gun control, and multi-culturalism do more wrong to this nation and to my education than a Democrat as President!

Go suck on a tailpipe, you liberal scumbag!

>structure, but it should be accessable to someone who was a tenth grader
>in 1962, or to current college graduates. It includes more ambitious
>construction projects, including SSB transmitters and receivers. It's also
>printed and bound using higher quality materials.

Hmmm... I checked my 1965 edition of the Handbook (which admittedly isn't as sophisticated as the 1962 edition must be), and can't find a thing about MMICs, DDS, PLLs, GaAsFETs, AX.25, switching power supplies, microprocessors, broadband RF amplifiers, PSK, AMTOR, data networks, DSP (or even A/D and D/A conversion), ASICs, CTCSS, DTMF, switched-capacitor filters, op amps, RS-232C, PBBSs, satellites, or noise-figure calculations. I also couldn't find any computer programs for network calculations, spherical trigonometry, antenna design, or anything else for that matter.

The 1962 Handbook is great if you confine yourself to 1962 modes. Part of the problem the Handbook editors deal with is that today, amateurs use all the modes that were in use in 1962, and a whole lot of modes that weren't even dreamed of 30 years ago. The only active elements that were easily available in 1962 were tubes; today, the Handbook has to cover tubes as well as several different kinds of transistors and a mind-boggling array of IC functions. The Handbook today is larger than it was in 1965 (I don't know about 1962), but still has had to trade depth for breadth. If you want depth, you need to go to other publications -- including some by the ARRL. Doug DeMaw's books provide the depth for HF construction projects, and there are books on VHF and microwave construction as well.

Really, Gary, what would you have thought if back in 1962, someone handed you a 1994 Handbook? Or the Spread Spectrum Sourcebook? Technology changes. How do you go about building something from the 1962 Handbook when it specifies a 6CW4 in the front end? Other than the construction projects, what specifically was included in the 1962 Handbook that has been omitted from the 1994 edition?

Considering that the Conditional class license was a General class
license given to people living more than 150 miles from the nearest FCC
office (when FCC offices were the only place you could take an exam) by
volunteer examiners, it probably wouldn't be a good idea. :-)

In rec.radio.amateur.misc, dan@mystis.wariat.org
(Dan Pickersgill N8PKV) writes:

>As I said, I have been impressed of late and am considering sending the
>ARRL a dues check. However there are many organizations that represent a
>good number of amateurs (W5YI as an example).

Dan,

I am pleased that you are considering supporting the ARRL. In spite
of the fact that we don't always do everything exactly the way
everyone would like, I feel that there are many important things
that we are doing that deserve support.

>But, maybe you are right, we need a second national ham group. Anyone
>wanna help me start one?

I am indeed interested; my choice to work here stems from a strong
desire to give back to ham radio a bit more that it has given me.
My loyalty is NOT to the ARRL, but to the concept that we try to
embody. If you are really willing to do all of what it takes to
put together a better national organization, (assuming it really
does come out better), you will have my support. I am glad that you,
too, share the same sense of dedication to Amateur Radio and are willing to
make some of the personal sacrifices of your personal time that will
go into forming such an organization!

Before I jump in, though, I would like to have some idea of the
goals of your proposed organization. Do you have a charter? A rough
draft of the bylaws? I am especially interested in the ways it would
be *different* from the several other major ham-radio organzations?
I what way would it be different from the ARRL? If you are going to
use the same political structure, why would yours work any differently
from ours, or QCWA's, or NARA's. (I am not really sure what W5YI is, but
let's include him/them for the sake of discussion.)

What major flaws do you perceive in the ARRL and the other organzations
and how would you structure the organization you are proposing to
overcome those flaws. And, IMHO, the most important question -- please
explain to me why it is better for Amateur Radio to create a new
organization from scratch than to identify the problems in the existing
structures and make them a more effective tool for the Good of All.

This should make for an interesting discussion; I am sure the usenet
amateur community will be patient waiting for your answers and more
information. We all do understand that developing answers to these

questions could not be an off-the-cuff sort of thing. It takes hundreds of hours, and many thousands of dollars in legal fees and other "incorporation" fees to put together a national not-for-profit organization. It is nice to see that there are those willing to make these sacrifices. Speaking of dollars, I *will* join the first year, just as soon as all of the paperwork makes it a viable organization, but I am not sure I will sign up every year, and the first time you do anything I don't like, it is over. :-).

Source record: 273485

I just joined this newsgroup and I have to admit that it has made me very sad. To anyone with even an inkling of a clue, the Scratchi article is blatantly racist. I don't think that it was anywhere near the line between racist and a fringe concern to which only the most die-hard "PC" person would take offense. While the original article was, in itself, offensive, what I really can't believe are the responses that it has gotten: people talking about how it could be a middle aged white man with a spelling problem or a Cajun person (as if it's o.k. to mock Cajun people). Were the minstrel shows of yore white people who just happened to have had shoe polish on their faces? No, they were racist people who were lampooning people of African origin.

The whole ``Political Correctness'' movement is an attempt at enumerating rules of conduct for people who a) don't know history and are therefore bound to repeat its mistakes and b) who were never taught the difference between right and wrong.

To those who weren't involved in this mess and are interested in amateur radio: I'm sorry for continuing the flame war.

To those who intend to flame me until I'm a charred biscuit: I've already left this newsgroup and I have a wonderful mail filter (thanks to Chip Salzenberg) that lets me dump junk e-mail down the tubes, AND I'm already a charred biscuit.

Good day, good life.

A question. I am about to build a 4 to 6 watt amp,
the design of which comes from page 61 of the Solid State Design book
by the ARRL. They call for a GE D446C transistor, and suggest a 2n5321
as a replacement worth experimenting with. Well being very new to this
hobby I am not sure if the design of the amp is highly dependent on
the characteristics of those particular devices or can I substitute
another device. If any of you are familiar with the amp design please make
some suggestions for replacement transistors for me.
Thanks

I have been an ARRL member since 1961 and only a DXer for 10 of those years. Otherwise I have never belonged to one of those groups.

> ARRL currently has the only full time paid lobbyist in Washington, but it
> was not always so. Wayne's old alternate organization had the first paid

> register a full time lobbyist too.

When some other organization actually *does* the representing as well as ARRL then they won't be the *only* representative. Until then it is just talk.

I only hope that whoever else does the "representing" doesn't get into an ARRL fabours it so we oppose it stance - the net result would not be good for anyone.

> >Such as? (Wayne Green is an oft-cited example, but if he's the best you can

Really??? Can you point out *anything* that the ARRL has actually done or said to support this? I have heard a continuous stream of such accusations since 1961, but have yet to see one that actually existed.

On the other hand Wayne Greene, SERA, LARC etc. have been *very* vocal about their supposed persecution.

This seems to go on for about 18 months then go away quitely, only to be replaced with some other horrible thing that ARRL has supposedly done.

NARA: novices/techs
SERA: repeater owners/users in the southeast US
AMSAT: AMateur SATellites
TAPR: digital
DX groups: DXers
QCWA: long-time hams

That they represent some substantial percentage of hams does NOT mean that
they are organizations for ALL hams. The ARRL is unique in that capacity.

> Yes the ARRL
>purports to represent *all* amateurs, but in reality they are mainly
>representative of the DXers, contesters, and ARES types who depend on
>the ARRL to manage their activities.

Sorry; they represent me, too, and I am neither a DXer, nor a contester, nor
an ARES type. I'm mainly a UHF repeater and packet radio type.

>The ARRL's attack on SERA is the latest example of their efforts to
>stifle other organizations who they think stand in their way.

What attack on SERA? I haven't heard anything, and I'm plugged in to the
frequency coordination network, since I'm still a director of the Texas VHF-FM
Society...

>Their attacks on Wayne have been long standing, and dirty

And his on the ARRL haven't?

>but that's not
>all they've done to try to retain hegemony over amateur radio. Even
>inside the ARRL, the old guard has done everything in their power to
>stifle dissent among the troops. The directors and the volunteers
>form a strong "old boy" network that squelches dissent with a vengence.

You must be talking to a different director than I am...there's a LOT of
dissent there.

>That's why there have been attempts at alternative organizations,
>reform from within has been nearly impossible. It's mainly the result
>of the grim reaper that the ARRL has changed at all in recent years.

Any democratic organization can be reformed from within. All that is required
is for enough people to get motivated to change the folks in power.

>Note, I don't think there's a secret cabal controlling the ARRL with
>evil intent. It just looks that way sometimes because the old boy
>network is so strongly entrenched, and it's members are so fossilized
>in their thinking.

...and, from the tone of the arguments here and elsewhere ("They screwed us 25
years ago! KILL!"), so are its opponents.

To put it bluntly, I'll misquote LBJ: Would you rather be on the inside of the
tent pissing out, or on the outside pissing in?

Urp. I slipped the decimal *again*. To convert from W/m^2 to mW/cm^2
you have to multiply by 1,000 to get the power into milliwatts and
divide by *10,000* to get the area into square centimeters. That's
the same as dividing by 10 so the corrected answer becomes 0.323 mW/cm^2.

> Something's still wrong here. The claim that the field strength

>
> I calculate the field strength as follows (making the same isotropic
>antenna assumption as did Gary):

Note I didn't make the assumption that the antenna was isotropic.
I assumed it to be a dipole oriented perpendicular to the line of
sight to the window. A purpose of an antenna is to act as an impedance
matching device between the transmission line impedance and that of free
space. Since we know that the maximum voltage will appear across points
separated by 1/2 wave, and if we assume the antenna is perfect, then using

E=sqrt(Po*Rfree) should give us the voltage across a 1/2 wave of free
space in the plane perpendicular to our line of sight to the window,
at the antenna. I just realized I'm basically ignoring the fall off of
field strength in the first 1.44 meters. That's where the difference lies,
I can't do that. The number I got is the field strength at the dipole
tips. Double aaarrrgh!

> Radiated Power = 3,000 watts
>

0.0257 mW/cm^2, you slipped the decimal too. :-)

> Electric Field Strength = sqrt(Power Flux * Free-Space Impdnc)
> = sqrt(0.2570 W/m^2 * 377 ohms)
> = 9.84 V/m rms
>
> Note also that to convert from W/m^2 to mW/cm^2 you need to multiply
>by 10.

Divide by 10. I don't see anything wrong with your approach, aside from
the slipped decimals. Our answers differ by about an order of magnitude.
That's because I screwed up assuming the field at the dipole was the
same as the field a bit over 1/2 wave away. It isn't. Just for grins,
let's do it another way and see how the answer falls out. Let's assume
the isotropic radiator to attempt to get the same answer. So 1 meter from
the radiator we have a sphere of 4*pi*R^2 or 12.57 square meters surface
area. That gives a power density of 3000/12.57 or 238.66 W/m^2 for a field
strength of sqrt(238.66*377) or 299.96 V/m. Now divde by 30.46 to get the
field strength at the window of 9.85 V/m. And that gives a power density at
the window of 0.257 W/m^2. Dividing by 10 we get 0.0257 mW/cm^2.

Ah, convergence. We're singing from the same songbook now.

Now isotropic radiators aren't real. If we assume a cylindrical pattern
from a dipole perpendicular to our window with no end effects, (simplifying
again), our field strength 1 meter from the antenna becomes 353.56 V/m. And
that puts the field strength at the window at 11.61 V/m. the power density
becomes 0.0358 mW/cm^2 which is almost the same as the number I stumbled
into in my original post thanks to errors of assumption and slipped decimals.
No credit for correct answers arrived at by incorrect methods. :-(

I am thinking of buying the Alinco DJ-560T HT now on closeout for $300.
I'd like to get comments from 560 owners and anybody else on what you
like and dislike about this unit.

Also, are there other HTs I should consider ? (I have limited budget).
The DJ-580 in now selling for $380, is the $80 difference worth it ?
what are the differences between 560 and 580 ?

please email replies if possible
thanks in advance

Jerry

Hello ham-heads (-|
I'd like to hear from anyone using a transverter on a 10M SSB rig to convert
to 6 meters.
Actually any info regarding 'transverters' would be appreciated since my
knowledge of such is null.
Thanks for reading.

Frank

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In rec.radio.amateur.misc, dan@mystis.wariat.org (Dan Pickersgill N8PKV) writes:
>I can agree to some of what you said. United front and all. But before
>the ARRL desides what _all_ amateurs want, maybe they could come out of
>the board room and ask a few of us?

In my experience, ARRL Directors spend considerably more time asking amateurs what they want than they spend "in the board room." Most Directors spend quite a few of their weekends making themselves available at hamfests and conventions throughout their Division, just so the members can buttonhole them and tell them what they should be doing. It's not their fault that all too few mwmbers bother to do so.

Let me ask you this... do you complain that your Congressperson doesn't listen to you, even if you haven't bothered to send them a letter or otherwise contact them? Of course not (I hope)! Nor should you expect ARRL Directors to be clairvoyant. You need to *talk* to them. Of course, your Director may not feel compelled to give much weight to a nonmember's complaints. (Then again, he may--I don't know.)

When ARRL presents itself to Washington as "representing amateurs," it does so in the same sense that NRA represents gun owners, or that AARP represents older Americans. No one believes that all those eligible to be members of these organizations are, in fact, members, or that all members of these organizations agree with every policy position of the organization. That would be ludicrous. But in each case, the organization is the pre-eminent representative of the community in question: amateurs for ARRL, gun owners for NRA, and older Americans for AARP.

It is also the case that ARRL members represent a good cross-section of the amateur population. From that you can resonably extrapolate that the desires of the ARRL membership in all probability reflect the desires of the amateur population at large. At least, there is no *better* indication of those wishes. Therefore, when ARRL policy reflects the merbership's wishes, it most likely reflects the wishes of the community as a whole, too.

So, the bottom line is this: ARRL members who contact their Directors to let their thoughts be heard have a disproportionate influence over the direction of Amateur Radio. But since full ARRL membership is open to anyone with a license, and since the Directors can easily be contacted, anyone who doesn't make their voice heard has only themselves to blame.

5018. CSPAN Interference

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-09 17:53:38 UTC
From: norton@joker.optics.rochester.edu
Message-ID: <NORTON.93Dec9175338@joker.optics.rochester.edu>
Source record: 273493

I've been watching the shuttle EVA's on C-SPAN for the last couple of nights and have had to put up with periodic interference. It cycles about every 15 seconds...clear....light interference....more interference ...then clear again... (Its actually not always 15 seconds.. its always varying)...
Anyways, I talked to some friends within a mile of my apt and found that they had the same interference directly in sych with mine...
So......I called the cable company (GRC in Rochester, NY) and told them about it... They had a serviceman come out and he told me it was due to cellular telephone communications.. and there was nothing they could do about it..
I dont know...their reason sounds bogus to me... Cellular is at 800 MHz. and I thought CATV freq's were much lower (around 200 MHz ???)..
Perhaps harmonics? but that would have to be sub-harmonic...Well...
Anybody have any insight? Its not a big deal since the EVA's are over with and I never watch C-SPAN otherwise...
Can I test the cable guys hypothesis any way? The interference could be from any location since the whole neighborhood seems to have the problem... I tried listening to some cellular on my scanner to see if it was matched with any transmissions ...no luck there..(Note: cellular listening was done merely for testing purposes :)

>with everything Greg has been saying. He's gotten a lot of unreasonable grief
>just because he has a higher sense of social responsibility than most people
>in this newsgroup. Treating other people and cultures with a little respect
>should never be labelled "pc-ism" - rather, it should be encouraged as a form of
>decency.
--

I disagree. First, he has a different social responsibility, not a higher one.
I believe the message is to value diversity even if you don't personally care
for the position. And second, the main reason he's taking grief is not so much
for what he says as the way he says it. I have experienced racial prejudice
personally, not as some theoretical exercise, and I cringe reading his words.
Zealots are a part of the problem - not the answer. Zealot's bang the mind's
door shut before the message can get a foot in it. If Greg truly believes in
what he says then he should be evaluating why he has received 1 supporting
message and roughly 10-15 responses questioning his message. Greg has shown
he can use sophmoric sarcasm quite well but he has not shown that he is capable
of analyzing the situation and adapting his approach to make his point in a
manner which has impact.

>that people wouldn't realize that Scratchi was Japanese.

I never saw the originals, either... but from the name & accent portrayal,
I'd have guessed Scratchi was Pakistani or from that region.

Judging, however, from the market share of American amateur radio, I'd say
Scratchi had the last laugh.

The article was interesting, though -- the prospective students seemed to
be ridiculing the non-cutting-edge nature of Scratchi's equipment. And I
thought that 1960's technology was pretty good in 1960! :-)

Hoping to see more Scratchi articles, I am --

>Is that the best you can do?

>Bet y'all miss them minstrel shows, too.

Greg - This is so typical of liberal behavior. Yes it was the best without really flaming yer butt....Now when faced with the truthful part that I wrote, and that is; this is a bit of amateur radio history and was written more than 30 years ago (as pointed out to you by others), you jump to another smart remark and try to raise color as an issue. Typical liberal way to squirm away from the truth. I doubt that Myron had any other motive other than to replay a bit of that history for us. What do you really know about amateur radio Greg? Do you have a ticket? I have not seen your callsign here. What do you know about life in the USA 40 to 50 years ago? What do you know about the person who originally wrote the Scratchi letters? What do you know about his motives? How many other Scratchi letters have you read? The answer is nothing, not much, zero..zip. No, you just jumped in with your new age PC crap and raised a lot of issues without doing the research. Too many folks use this political correctness to white wash the truth Greg....and that's what I object to. And they use it to rewrite history books and change our social values. Now in typical liberal

fashion you have me stereo-typed as some sort of bigot. Why I might even be black for all you know, or a member of some ethnic group....but you're so cocked sure about what I found funny about Scratchi..and it can't be good. Well Greg..you have no idea what I believe, what I know, what I've done..how well I do it...but you're guilty of what you accuse the rest of doing. Now you can go back to your cage and clean the egg off your face.

I've glanced at old Scratchi articles from time to time over the years and have always been confused as to what was being satirized. So I have to agree with those who are surprised at how offensive Greg found the posted article. What I can't agree with is the nature of the attacks on him. A simple, "Gee Greg, I didn't find the article racist - what in particular are you referring to?" would have sufficed. Greg had the courage to speak up and say, "this sort of thing may be unnecessarily hurtful to a particular group; let's be careful." I applaud him for that.

5025. Chicago area scanner radio club meeting this Saturday

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-09 19:37:35 UTC
From: parnass@cbnewse.cb.att.com
Message-ID: <CHs96q.JAs@cbnewse.cb.att.com>
Source record: 273512
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc,chi.places

The next CARMA meeting is Saturday, Dec 11, at Philly's restaurant, 63rd St. and Route 83 in Willowbrook.

CHICAGO AREA RADIO MONITORING ASSOCIATION

by Bob Parnass, AJ9S

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many of our members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members sometimes sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $10 check, payable to Kim Moran, to:

Kim & Ted Moran
6536 N. Francisco, Apt. 3E
Chicago, IL 60645

Many CARMA members participate on the SCUG computer bulletin board, run by Will Sperling. We are on Sub Board #3 in the networked Sub Boards. If you have a modem and terminal or computer, you can reach the SCUG BBS by calling (708)852-

1292.

Here is a tentative meeting schedule for 1994. All 1994 meetings
will be held on Saturdays at the Destiny Restaurant, 1440
Rand Road, Des Plaines, IL:

February 19
April 16
June 18
August 13
October 15
December 10

Bring a notebook and your appetite.

Michigan law specifically grants amateur's with a Technician
license or higher permission to have/use radios capable of receiving public
service bands in their cars. For some reason, Novice's are not included, not
sure why.

Greg, thankyou for so eloquently saying what
I wanted to say, but am too mad. I am afraid that
in my rage, I will only embarrass myself.

I can't understand why some people can just
pass this type of racism off as "just in fun".

It wasn't fun when I was a kid, having other
kids ridicule me as being half asian, slanting
their eyes, speaking in 'scratchi' and making
fun of my mother. It really hurt, I guess they
will never understand. So, I appreciate
the intelligent manner in which you present
your argument. I hope some of them get a
clue, but I doubt it.

|> becomes 0.0358 mW/cm^2 which is almost the same as the number I stumbled
|> into in my original post thanks to errors of assumption and slipped decimals.

Yes, I did blatantly blow the fact that Gary specified a half-wave dipole rather than an isotropic radiator.

In copying numbers from my calculator to my workstation, I dropped the exponent in the power density at 100 feet expressed in mW/cm^2, which led to my final statement about the W/m^2 to mW/cm^2 conversion factor being wrong. Just as I posted the message, I got a bad feeling about the order of magnitude --- hence my immediate followup to my first post (I trust that made it out).

Anyway, we now agree about the flux and field strength at 100 feet from an isotropic radiator. In the case of the half-wave dipole, we nearly agree.

We say the flux and field strength from the isotropic radiator are:

0.02570 mW/cm^2 and 9.84 V/m.

The gain of a half-wave dipole relative to the isotropic radiator is 2.14 dB (I'm presenting this as a given --- I'll listen to counterarguments). This represents a power ratio of:

10^(2.14 / 10) = 1.6368

and a voltage ratio of:

10^(2.14 / 20) = 1.2794.

Thus, the flux and field strength from the dipole (at 100 feet) are:

0.02570 mW/cm^2 * 1.6368 = 0.04207 mW/cm^2

and

9.84 V/m * 1.2794 = 12.59 V/m

Now we differ by only 0.7dB! Certainly the difference is in the right direction, given that you assumed the flux from the dipole is evenly distributed over a cylindrical surface surrounding the dipole. It is interesting that the resulting error in field strength is only

8 percent. A single half-wave dipole just isn't very directive, eh?

5034. 6-m Transverters

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-09 22:35:22 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9312092235.AA16680@cmr.ncsl.nist.gov>
Source record: 273432

In answer to a repeated question about the efficacy of transverters for 6 meters..... to use with a 10-meter rig.

Many people feel that transverters are The Way To Go for 6 SSB/CW . They point out that many HF-only rigs have better filters, etc., that the cheaper rigs that cover 6.

One of the main disadvatages is the small number of 6-m transverters available. Most (all?) currently-available xverters use the common 10-W output module also used by the 10-W all-mode rigs. The cheapest available 6-to-10 xverter that I know of is the Down East Microwave unit. It looked mechanically very nice at last summer's Central States conference. You can find their ad in QST and other ham mags.

Some of the older xverters, such as the Hallicrafters HA-6, were all-tube and put out close to 100 watts. Their receive side wasn't great, being a 6CW4 Nuvistor (intermod) for rf amplifier. Transmit side output was a 5894. The 6-m HA-6 didn't have the LO frequency instability problems of the 2-m HA-2. Even there, putting a VR-90 (75?) on the B supply to the LO fixes the problem.

You'll want 100 watts or so output on 6 SSB/CW, so an amplifier will be needed with any 10 W xverter or rig. A 50-W rig is the minimum you'd want.

5035. Motorola Radios

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-09 23:57:47 UTC
From: osay@pool.info.sunyit.edu
Message-ID: <1993Dec9.235747.28186@pool.info.sunyit.edu>
Source record: 273500

I need to know where to find good prices on Motorola radios. The fire department I belong to in going to purchase some new Hi-Lo band radios in the near future and we would like to get a good price.

I know this is not a ateur radio request, but I thought someone out there would know a good distributor of Motorola products. BTW I dont know the exact model number of the radios yet.

Thanks for any help.

P.S. Please send E-mail to this account (This is the account of a friend but I can can use the account to get the replies)

5036. Receive broadcast FM on 2m mobile antenna?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 00:32:57 UTC
From: riyadth@boi.hp.com
Message-ID: <CHsMuy.DJH@boi.hp.com>
Source record: 273439

Hello,

I was wondering.. (here I go, getting myself in trouble again!) .. if
it would be possible to install a 2m antenna on my car in place of my
standard antenna, and have some type of adapter that would allow me to
use it with a(n) HT and also with my stereo (without damaging either one).
Has anyone tried this? I don't know how broadcast AM/FM reception will
be affected, but everything I listen to around here can be heard with
little or no antenna at all, so I don't think that will suffer too much.

I remember seeing combination CB/AM/FM antennas advertised in the
past, with some kind of isolator to prevent the CB from overloading the
AM/FM receiver. Is there any similar product for Amateur Radio use?
Otherwise, I guess I'll just buy a magnetic mount antenna for amateur
use -- but it sure would be nice to have a more permanent solution.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

AURORAL ACTIVITY PREDICTIONS (10 DEC - 19 DEC)

>
>
> And second, the main reason he's taking grief is not so much
>for what he says as the way he says it.

No.

I was quite clear and quite measured in my initial response to Myron's post.

I became much less measured when confronted with knee-jerk, reactionary responses which failed to address the issues presented but instead were written in response to some made-up image which bore little relation to what was actually being said. And even less measured when confronted with certain individuals attempts to remain ignorant of what was actually said. And to continue to engage in and defend racist behavior.

>Zealots are a part of the problem - not the answer. Zealot's bang the mind's
>door shut before the message can get a foot in it.

You're so right, Dennis. Zealots who respond to any suggestion that smacks of social progressivism with cries of "PC! PC!" are part of the problem. Zealots who start screaming "First Amendment! Oppression! 1984!" if someone dares to suggest that a writer voluntarily temper his words in consideration of the feelings of others.

> If Greg truly believes in
>what he says then he should be evaluating why he has received 1 supporting
>message and roughly 10-15 responses questioning his message.

Well, I know *Dennis* doesn't have my password. He clearly hasn't read my mail.

> Greg has shown
>he can use sophmoric sarcasm quite well but he has not shown that he is capable
>of analyzing the situation and adapting his approach to make his point in a
>manner which has impact.

Wrong again, ace. I tried the reasoned approach. Usually when people end up shouting at you, it is because you were too damned deaf to hear the talking. And I didn't use sarcasm. The people whom I described as illiterate, racist, and reactionary ARE that, in my opinion. I do not use those terms lightly.

Dennis, if you have experienced racism first-hand, as you claim, why is it that you continue to defend it?

Greg

!!END-DATA!!

NOTE: The Effective Sunspot Number for 08 DEC 93 was 37.0.
The Full Kp Indices for 08 DEC 93 are not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Flare activity was minimal.
A new region may be coming into view near N07, but it is as yet
unnumbered.

Solar activity forecast: solar activity is expected to be
very low.

STD: A full-disk Yohkoh x-ray image has been appended to this
report which shows the increased emissions near N07 and a
narrow southern-hemisphere coronal hole which has not yet fully
rotated into view around the west limb.

The geomagnetic field was quiet. Yesterday's storm abruptly
gave way to the very quiet conditions seen now.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 10 dec-12 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 dec-12 dec

A. Middle Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/20/20
Minor Storm 10/10/10
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over all
regions. However, global MUFs are depressed between 20 and 30
percent below normal. Similar conditions are expected to
persist over the next 72 hours, through 12 December inclusive.
There are still reports of VHF openings in the Australian
regions. FM reception was reported in Brisbane and Pakenham on
frequencies as high as 100 MHz. These openings are likely the
result of persistent sporadic-E.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

5041. Mobil operation vs. car computer

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 04:54:42 UTC
From: alangut@aol.COM
Message-ID: <9312092354.tn46364@aol.com>
Source record: 273436

Hi all,
I know I'm probably re-hashing an old subject.. but I didn't pay attention before 'cause I wasn't in the market for a new car.
I remember reading in QST and elsewhere all the cautionary advice about certain automotive computer controls being knocked out by RF transmissions of over 5 watts or so.
What makes/models of new cars should I avoid? Does anybody out there have any experience with this?
Thanks, Alan WB2FZC alangut@aol.com

I haven't "given a supporting message" because I think that the point of this newsgroup is ham radio. Pure and simple. The diversions should really lie in rrap, if anywhere (no flamebait intended). In any event, I will say that I find out-of-date stereotypes questionable; but I tend to be desensitized to them because I "filter them out", as I [wrongly] assume most people know better than to have that kind of silly prejudice in today's more enlightened times.

ObRadio: Is there any experementation with ultra-high speed data mode going on? I'm talking in the 56kbit - 10 Mbit per second range. Who would one talk to about these? Many thanks in advance.

>really flaming yer butt....

Well, gawwwllleeee. My butt's hottern' a leaky ol' still. What is this, the 'Hampshire Hillbillies?

> Now when faced with the truthful part that I
>wrote, and that is; this is a bit of amateur radio history and was
>written more than 30 years ago (as pointed out to you by others), you jump
>to another smart remark and try to raise color as an issue.

Color *IS* the issue, you ignoramus. Look up 'race' in the dictionary.

>Typical liberal way to squirm away from the truth...

Whatsa matter, the PC label didn't work so now you have to tag a 'liberal' label on what you can't get your mind around?

> I doubt that Myron had any other motive
>other than to replay a bit of that history for us.

I already said that. Over, and over, and over... ...but you're so busy making mental Dymo labels that you apparently aren't able to read. Hope you read engineering specs a little better.

> What do you really know
>about amateur radio Greg? Do you have a ticket?

Use the call-sign server. I did, and found I've been an active ham longer than it suggests you have. You can find the same information, at least if you can read the FAQs well enough to glean it. By the way, how is your ad hominem argument relevant?

>I have not seen your callsign here.

Then you don't read the net much. No, unlike you, I don't have to put all kinds of irrelevant stuff in a .sig file.

> What do you know about life in the USA 40 to 50 years ago?

Are you asking for a transcript?

>What do you know about the person who originally wrote the Scratchi
>letters? What do you know about his motives? How many other Scratchi
>letters have you read?

I'd invite you over to see my collection of old ham literature (I've been one of those wierd collectors of the stuff since before it was popular. Used to pick up QSTs at the local thrift stores.)

> The answer is nothing, not much, zero..zip.

While you're looking up 'race,' look up prejudice. Your refusal to read what's written, to label everything and move on, to answer your own questions before hearing the answer demonstrates an inclination towards prejudice. One wonders how you've managed to have any success as an engineer. Then again, it is defense...

> No, you
>just jumped in with your new age PC crap and raised a lot of issues without
>doing the research.

Actually, I raised one issue.

> Too many folks use this political correctness to white
>wash the truth Greg....and that's what I object to.

So why don't you stop painting the truth with a white-wash label you call 'political correctness,' and let it stand for what it is... or isn't?

> And they use it to
>rewrite history books and change our social values.

Yep, gotta keep them damn historians from writing all them history books all the time. The ones we had wuz good enough. Then along comes all these liberals, wantin' to change our social values. Out marching through Alabama...

> Now in typical liberal
>fashion you have me stereo-typed as some sort of bigot.

You've established yourself quite nicely without need of any stereotypes.

> Why I might even be
>black for all you know,

If you are, you aren't very good at it.

> or a member of some ethnic group

...which wouldn't stop you from being racist.

> ....but you're so
>cocked sure about what I found funny about Scratchi..and it can't be good.

1. Political rectitude sucks! It has deprived us of access to some of our history and classics, merely because it might "offend" someone. How can you understand yourself if you cannot access the information on your background. Case in point, I cannot see Disney ever re-releasing _Song of the South_, which was a delightful movie, because it is a stereotype.

2. I read a couple of issues of CQ back in the late '50's, and found it puerile then (the Scratchi articles definitely contributed to the impression), and I was only a teenager at the time. The posting was interesting nostalgia, but the literary quality was...

3. Isn't this an _amateur radio_ group?? CQ real ham stuff!

73 all, de John, W3ZID

5048. Help with HW101

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 14:01:49 UTC
From: djadams@silver.ucs.indiana.edu
Message-ID: <CHtoB1.Mwr@usenet.ucs.indiana.edu>
Source record: 273438

Greetings! My HW-101 is giving me some troubles and I was hoping
there might be a few heathkit gurus on the net. It has the following
symptoms.

1) Power supply has two settings: 250V and 300V. Receiver works with
either. Mic will key the transmitter with either. CW key will not key
the transmitter in 250V

2) When AF gain is over half up (PS at 300V), the CW key will not key the
transmitter. Turning AF gain below 50% will allow the key to function.
(You can hear the tones softly with the AF up, but the transmitter does
not actually switch on...the tones are just coming through the receiver)
The mike will key the transmitter regardless of af position.

3) CW key gives full power (actually my meter show more than supposed full
power shooting up the antenna). Mic gives about 1/4 power (20-25W).

4) Transmitted power steadily declines with use (though this may be due
to over-heating from unrstricted air flow...)

Any help/ideas would be appreciated.

Thanx

Dave

Well Greg it finally comes out. You obviously have some prejudices of your
own. You just did the very thing your are berating everyone else for. I
just happen to be from the south and I am offended that you mock our speech
patterns and imply that we are all just a bunch of ignorant hillbillies.

You posted the mail from the gentleman who is half-Asian and was teased as
a child for it. We moved out of the south for a period when I was growing
up and I was teased and mocked for my southern drawl and the way I talked.
The other kids imitated my southern accent just the way you are doing. I bet
it does chap your PC ass to know you are no better than those you criticize.

But you know what? It doesn't really bother me, I am just putting you on.
I really did grow up in the south and I was teased as a kid but I don't take
such things personally. I can laugh at the Beverley Hillbillies, and Green
Acres, and even the Ernest movies without feeling personally attacked. As
others have tried to point out it is the intent that is important. I seriously
doubt that there is a single participant in this thread who would condone
blatant and vicious racism or prejudice. That wasn't the intent of the person
who originally posted the article and probably wasn't the intent of the author
either but I have no way of knowing so I personally choose to give him the
benefit of the doubt.

It has gotten to the point where you can't do or say anything in this country
without offending someone for something and they're going to get in your
face about it. Lighten up! Yuh know whut ah meen, Vern?

List of 10-Codes deleted....

Note that this is the suggested use of the 10-codes. If a police department
rarely gets a 10-89 (bomb threat) they could use it for another purpose.
They can also disregared the list and make up there own 10-Code.

Yes, mine does that too. It's a click with a slight chirp
characteristic to it. I'd be interested in knowing what
the fix is. I've heard that some manufacturer fixes
reduce radio performance :-(Wasn't there a intermod fix
for some brand of HT that simply reduced sensitivity? I
would guess the fix in this case won't... Please post the
outcome of your dealings with Yaesu; I think the community
would be interested.

Peter

PS: Has anyone ever seen a user-written user guide to the
FT530? I come across undocumented how-to's every once in a
while. For example, pusing PTT when the unit is off
changes the time display to reveal the seconds!

>
>Really, Gary, what would you have thought if back in 1962, someone handed
>you a 1994 Handbook? Or the Spread Spectrum Sourcebook? Technology changes.
>How do you go about building something from the 1962 Handbook when it specifies
>a 6CW4 in the front end? Other than the construction projects, what
>specifically was included in the 1962 Handbook that has been omitted from
>the 1994 edition?

Hmm. If I need a 6CW4 for a project, I reach right over here in this drawer and pull a new one out of the RCA packaging. You picked a bad example since I have a stockpile of these to support Ampex VR2000 videotape machines. I may also have the world's largest supply of 6C10s. :-)

And BTW the '62 volume does have a chapter on semiconductor devices and their physics. It doesn't cover ICs of course since they weren't yet available. But really, they're not much more than a block diagram abstraction of conventional circuitry.

The 1962 Handbook has 624 numbered pages, plus index and advertising sections. I don't know how many pages my newest Handbook has since it re-numbers pages at each chapter break, an annoying bug IMHO. It also has a less than useful table of contents and index. It also seems to jumble up construction projects and theory instead of offering them in coherent sections. It seems to be attempting to be a shallow encyclopedia rather than a coherent guide to radio-electronics as it applies to amateur radio.

It's true that there are new devices to be discussed in the newer Handbooks, though the devices used in the construction articles seem to be discontinued whenever I attempt to build one of the circuits. :-(However, the electronic theory sections in the older book are lucid, useful, and more accessable than those in the newer editions, again IMHO. Basic electronic theory hasn't changed since 1962 even if some of the particular devices implementing it have.

I don't generally consider the Handbook as primarily a source of construction projects, though I'll point out that older editions had more ambitious projects. I keep a Handbook around primarily as a reference volume, and as a reference volume the newer books are less useful than the older ones. It reads more like a series of articles for QST than as a coherent volume. (Now if you want to compare the technical content and quality of the 1962 QST with today's issues, that's another argument we can get into.)

The new Handbooks have great superficial breadth, but less depth
in fundamental areas. Maybe that's inevitable, but I find them
less useful than the older books, and I find myself turning more
often to other references, such as the RSGB books, or professional
Handbooks like _Reference Data for Radio Engineers_ and its ilk.

The Spread Spectrum Sourcebook suffers from the same fate of appearing
to read like a disconnected collection of magazine articles. On the
other hand, DeMaw's books are coherently written, as are those by
Walt Maxwell and Chris Bowick. They develop their subject matter in
an orderly and concise manner. Of course the Handbook has many authors
of varying ability, and that no doubt leads to it's magazine quality.
Still I think a more heavy handed editor could help bring a bit more
order and consistency to the volume. I realize that isn't an easy job,
and that a particular editor may have a different vision of what the
Handbook should be than I do.

What I want out of the Handbook is a solid theory section that's easily
accessed for reference, and some practical projects that can serve as
examples of the techniques addressed. An example of where the current
Handbook goes wrong IMHO is the rotor control project in the space
communications section. While rotor control is something someone building
a Earth terminal must consider, that project should have been in a chapter
on control systems, a chapter that's missing from the book. I'd also like
a through quick reference section of the appropriate charts, tables, formulae,
and the like that a radio engineer needs frequently. The older Handbooks
did a better job of meeting these objectives than the newer ones IMHO.

Free space, but a single dipole on a 70 foot metal tower probably doesn't emulate free space very closely. Getting into calculating the exact difference is probably a waste of effort. *Measuring* it is the only realistic way to know what the pattern looks like.

> Now we differ by only 0.7dB! Certainly the difference is in the

Well we *knew* that. :-) The only serious nulls are off the ends and that's a small percentage of the total pattern, apparently about 8% since I deleted end effects completely in my simple model.

Hi all.

I'm posting this for a friend who is nuts into radio hardware, so any help would be appreciated! His name is Mark O'Leary, known in Cork area as EI5EFB (it says here :-)

He's looking for any keyboard or hardware mods for the following units:

ICOM ICP4ET 70 cm handheld

YAESU FT530 dual band handheld

KENWOOD TH78E ditto

Or maybe someone could point me towards some FTP site that keeps docs/FAQs on this kind of stuff.

Replies by e-mail please (if no-one else is interested!)

Thanx in adv.

Fergus.

>Otherwise, I guess I'll just buy a magnetic mount antenna for amateur
>use -- but it sure would be nice to have a more permanent solution.

Antenna Specialists carries just what you want in their *police*
catalog. It's a "stealth" antenna for undercover work. They have
models that exactly emulate the appearance of ordinary auto radio
antennas for that vehicle model while actually being high band VHF
antennas, and they still work for AM and FM reception too. They
include the duplexer. Any AS dealer who supplies police agencies
can order you one for your car. Installation can be a little
tricky.

Note, a center of roof mount will still work better than the cowl
mount, but this is better than on-glass or magmount expedients.

5056. Re: Scratchi, January, 1960

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 15:59:35 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CHttrC.IpM@hpqmoea.sqf.hp.com>
Source record: 273490

I ENJOYED reading Myron's posting.

Scratchi was previously totally unknown to me, so I just read what was there.

I interpreted it as a commentry on the different interests and viewpoints of different generations. It said that two different generations do not understand each other, and can fail to predict this. It did not seem to attack either generation.

I thought there was a strong element of lampooning old fashioned stereotype characterisation.

Perhaps Myron's parody is a little too subtle for everyone to recognise it ? Even if he now states his intent, no matter what that intent was, not everyone will believe him. We will never know with certainty.

Foreigners and children have the ability to see things, and ask questions that are too fundamental for others to notice (or dare)

Cheers

Hmm, Robert, I disagree. You mean *commercially* available transverters?

E.g. I'm using a transverter that when you look at the scheme make your
eyes drop. 4 transistors. OK, of course, when you want to have a bit
more output than you'll have to make/buy an amplifier.
>You'll want 100 watts or so output on 6 SSB/CW, so an amplifier will be

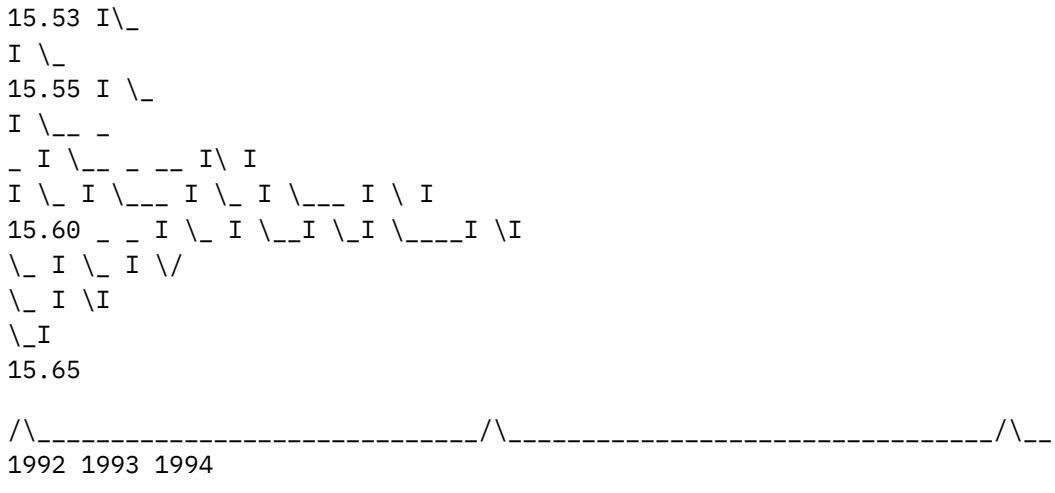
=========
SpaceNews
=========

MONDAY DECEMBER 13, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* MIR NEWS *
============
Jean-Claude, FB1RCI, of Marseille, France has provided a graphical view depicting the altitude of the Russian space station Mir over the past year based on the mean motion of the spacecraft:

Rev per day



(I = Boost to higher orbit)

* AMSAT-OSCAR-13 NEWS *
=======================
AO-13 is now experiencing the longest eclipses it will ever experience, indeed the longest that ANY amateur satellite has received! The period affected is Dec 08 - 24. Most eclipses exceed 2 hours, with the longest 136 minutes on Dec 15th.

In addition, the Sun angle is -30 degrees and worsening, giving only 86% illumination now, less later. The mode-B transponder is only just

sustainable, and is on for the minimum sensible time, MA 180-250 with a break from 220-230 for mode-S exclusive.

There is no guarantee that even this is enough safety margin, and further curtailments may be necessary, including a slight reorienation to collect more sunlight.

The Whole Orbit Data collection in the K-block is presently monitoring battery voltage. The safety threshold is 12.6 volts, when the on-board computer will closedown the transponder if necessary. Bytes 64-191 are voltage at 8 MA intervals, and convert as V = (N-10)*0.0668 volts.

Please be sensitive about your uplink power. Remember, optimum conditions occur at only 30,000 km range now. Compared with apogee that's a 6 db round trip improvement, so you can cut your power by 1/4 and be no worse off.

L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Dec 08-Jan 31
Mode-B : MA 250 to MA 256 ! OFF Dec 08 - 24 | Eclipses, max
Mode-B : MA 0 to MA 180 ! OFF | duration 136
Mode-B : MA 180 to MA 220 ! minutes.
Mode-S : MA 220 to MA 230 !<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 ! Alon/Alat 240/-5
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
Long eclipses and poor Sun angle now need maximum OFF time.

[Info via James, G3RUH @ GB7DDX.#22.GBR.EU]

* ITAMSAT-OSCAR-16 NEWS *
==========
ITAMSAT-OSCAR-26 suffered a software crash at approximately 11:30 UTC on 08-Dec-93 during a pass over Europe. The crash left the transmitter on with no MBL or telemetry. The satellite was successfully recovered on 09-Dec-93 through a joint effort by Alberto Zagni I2KBD and the Eyesat ground station in the United States. IO-26 was reset to its safe mode (MBL with transmitter off) at about 05:40 UTC.

Alberto, I2KBD, on the first evening pass over Europe was able to switch the transmitter on again, and began some memory dumps in order to gain more information about the software crash. The TX was switched on at 19:00 UTC, and is now sending MBL telemetry.

The ITAMSAT Command Team will probably delay the recommissioning of the BBS on IO-26 to allow a better understanding of the orbital parameters, in order to be able to raise the power when the BBS will be turned on again. Look for any bulletin in the downlink for upcoming WODs.

The ITAMSAT Command Team would like to thank the Eyesat ground station, Jeff Ward G0/K8KA and Harold Price NK6K for their help.

ITAMSAT Command Team can be reached via Internet as i2kbd@amsat.org or ik2ovv@amsat.org, and on Compuserve HAMNET.

[Info via Luca Bertagnolio, IK2OVV, of the ITAMSAT Command Team]

In rec.radio.amateur.misc, jfh@netcom.com (Jack Hamilton) writes:

(text deleted)

>Because it could be confused with a usage of the form KD6TTL/ZL1. The US
>"owns" prefixes AG, AE, and AA, so KD6TTL/AG wouldn't appear to be from
>another country, but we don't own AT (which is not assigned, according to
>my Callbook).

(text/sig deleted)

AT is assigned to the country of India (VU). The full prefix allocation
is ATA to AWZ. DXers may remember working such stations as AT0N or AT0U
during any of the past DX contests.

It's not considered a "parent prefix" (like VU), so you may not see a
general call listing of it in the Callbook.

If so desired, I could probably operate from India with a callsign such
as NJ1Q/AT, or AT/NJ1Q.

5067. dp v3.5 and patch

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 18:38:33 UTC
From: hiot@helios.rz.tu-clausthal.de
Message-ID: <1993Dec10.183833.8854@solaris.rz.tu-clausthal.de>
Source record: 273363

Hello OM or YL,

DIGIPOINT v3.5 and the patch (v3.5 to v3.5.01) is now on the FTP-Server
for HAM-Radio-Software

ftp.tu-clausthal.de

digipoint is a pr-terminal, pr-box and sat-tracking software with
multilanguage support for the ATARI ST/STE/TT/Falcon computer.

5068. Re: ARRL's callsign admin position

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 18:39:01 UTC
From: ehare@arrl.org
Message-ID: <2683@arrl.org>
Source record: 273462
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In rec.radio.amateur.misc, dan@mystis.wariat.org
(Dan Pickersgill N8PKV) writes:

>As I said, I have been impressed of late and am considering sending the
>ARRL a dues check. However there are many organizations that represent a
>good number of amateurs (W5YI as an example).

Dan,

I am pleased that you are considering supporting the ARRL. In spite
of the fact that we don't always do everything exactly the way
everyone would like, I feel that there are many important things
that we are doing that deserve support.

>But, maybe you are right, we need a second national ham group. Anyone
>wanna help me start one?

I am indeed interested; my choice to work here stems from a strong
desire to give back to ham radio a bit more that it has given me.
My loyalty is NOT to the ARRL, but to the concept that we try to
embody. If you are really willing to do all of what it takes to
put together a better national organization, (assuming it really
does come out better), you will have my support. I am glad that you,
too, share the same sense of dedication to Amateur Radio and are willing to
make some of the personal sacrifices of your personal time that will
go into forming such an organization!

Before I jump in, though, I would like to have some idea of the
goals of your proposed organization. Do you have a charter? A rough
draft of the bylaws? I am especially interested in the ways it would
be *different* from the several other major ham-radio organzations?
I what way would it be different from the ARRL? If you are going to
use the same political structure, why would yours work any differently
from ours, or QCWA's, or NARA's. (I am not really sure what W5YI is, but
let's include him/them as an organization for the sake of discussion.)

What major flaws do you perceive in the ARRL and the other organzations
and how would you structure the organization you are proposing to
overcome those flaws. And, IMHO, the most important question -- please
explain to me why it is better for Amateur Radio to create a new
organization from scratch than to identify the problems in the existing
structures and make them a more effective tool for the Good of All.

This should make for an interesting discussion; I am sure the usenet
amateur community will be patient waiting for your answers and more
information. We all do understand that developing answers to these

questions could not be an off-the-cuff sort of thing. It takes hundreds of hours, and many thousands of dollars in legal fees and other "incorporation" fees to put together a national not-for-profit organization. It is nice to see that there are those willing to make these sacrifices. Speaking of dollars, I *will* join the first year, just as soon as all of the paperwork makes it a viable organization, but I am not sure I will sign up every year, and the first time you do anything I don't like, it is over. :-).

73 and Happy Holidays from ARRL HQ! Ed

Ed Hare, KA1CV ehare@arrl.org
American Radio Relay League
225 Main St.

Dan Pickersgill N8PKV <dan@mystis.wariat.org> wrote:
>For the purposes of some recient proposals, I believe, W5YI represented
>itself as an organization (quoting a membership of all it's
>subscribers). And W5YI is a VEC, does he do all the work himself?

God, that's a stretch. What does he do for his subscribers besides send him a newsletter every N weeks? As for the VEC, he formed a non-profit corporation for that specific purpose.

>But, maybe you are right, we need a second national ham group. Anyone
>wanna help me start one?

Not me; I'd rather fix the one we have.

>I said "totally".

And I meant what I said: the FCC was going to take some spectrum away from us, facts be damned. If that isn't totally adversarial, I don't know what is.

>Private interests had SOMETHING to do with it.

They didn't start it, though...the FCC did, internally.

>Jay, I honestly hope that our relationship with the FCC is not as bad as
>you say (in fact I know it is not from the dealings our area hams have
>with the FCC). If it were, Amateur Radio would be lost.

The difference there is that the local FCC types are generally sympathetic to ham radio...but it's not them that makes policy: it's the ones in Washington, and it's _those_ folks who have decided that ham radio isn't worth screwing with. They are the ones to whom we need to present a united front.

>I can agree to some of what you said. United front and all. But before
>the ARRL desides what _all_ amateurs want, maybe they could come out of
>the board room and ask a few of us?

Have you told your director what you think lately?

Wait--I don't find the handbook (1991 ed) particularly easy reading--I'm
definitely not at the eight grade level. OK, maybe just college, but
even so, that handbook isn't really that simple to read if you aren't
so experienced as to be an engineer or for that matter, an Advanced--
Granted, things like electrical theory are um. . .abbreviated, but I think
they are for people like me, who only have limited experience in
electrical networks.

: One of the better years for the Handbook is 1962. That's the edition to
: which I refer most often. It uses bigger words and more complex sentence
: structure, but it should be accessable to someone who was a tenth grader
: in 1962, or to current college graduates. It includes more ambitious

Are these current college graduated assumed to have graduated in a techincal
field. i.e. What if the graduate is a graduate in the humanities or
natural sciences??????

IMHO that 2.25 inch thick manual is plenty to start with.

Message-ID: <2eahj4$l7k@canopus.cc.umanitoba.ca>
Source record: 273449

I figure sometime next year or so I will be moving to the UK
and I thought that picking up a ham-radio licence would be an
intersting way to keep in contact with some of my friends in
Canada. I am not aware of the difference in the "rules" of
amateur ham radio operation in the UK and was hoping someone
could fill me in.
Particularly I'd like to know if I got my licence in Canada
would it be void in the UK? What frequencies do they use
over there? For example, if I bought a dual band radio here
would it work over there or would I have to purchase one in
the UK?

Any other info would be greatly appreciated...

: 6CW4 Nuvistor (intermod) for rf amplifier.

I always thought that superior strong-signal handling capability was one
of the ADVANTAGES of a tube-type front end. One disadvantage of a 6CW4 is
a noise figure worse than you can get with modern solid-state devices.
This is a problem on 2 meters, but not a concern on 6, where atmospheric
noise levels are higher.

Alpha Bravo alphabets

Here is a collection of alphabets of the Alpha Bravo Charlie Delta kind, variously known as radio alphabets, phonetic alphabets and spelling alphabets. This collection currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian, Rumantsch, Swedish, Hungarian, Finnish and Russian.

This posting supersedes the one of 29th October.

My thanks to the many contributors, not all of whom are acknowledged below.

I can make no guarantee of accuracy of this information; indeed please send me any corrections or additions.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
10 December 1993

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by the International Civil Aviation Organization and the FAA. UK police use Indigo instead of India (?)]

From a Swedish (also Dutch, Hungarian) telephone directory:

Alfred Benjamin Charles David Edward Frederick George Harry Isaac Jack King London Mary Nellie Oliver Peter Queen Robert Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Swiss version: Andrew Charlie Lussy Queenie Sugar]

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany Honolulu India Japan Kilowatt London Mexico Norway Ontario or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United

Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) version (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[This one seems to have undergone quite a lot of evolution,
with different branches of the U.S. armed forces using
different versions. Entries also cited: affirm, cast, hypo,
inter, negat, option, over, prep]

Used (still?) by New York police:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

From a Dutch telephone directory:

Amsterdam Baltimore Casablanca Danemark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[Described as 'international' but almost identical to an
alphabet described as 'French']

Why don't you use the Disneyland repeater? Disneyland is in
Anaheim.

The freq is 146.34 in 146.94 out. PL is either 1Z or 3B. I
believe the repeater is in the Matterhorn Roller coaster.

5077. CA Ham License Plates

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 21:46:50 UTC
From: msattler@netcom.com
Message-ID: <msattlerCHu9u4.2Dp@netcom.com>
Source record: 273365

How do you get custom license plates with your ham call letters? Well, in the state of California you visit the Divison of Motor Vehicles (DMV) and fill out a form 583, show them your ticket pony up $21, and surrender your current license plates. You'll get a temporary permit and the plates in the mail.

The following is the relevant portion of the DMV operations manual as photocopied for me on 10 Dec 1993.

4.130 Amateur Radio Call Letter (VC 5005)

Persons holding an unexpired amateur radio station license issued by the Federal Communications Commission (FCC), may apply for special call letter plate for one:

* commercial vehicle OR
* passenger motor vehicle OR
* motorcycle

The vehicle must be registered to the licensee.

The plate cannot be issued for trailers.

Amateur radio plates that the station's call letters may be issued to operators of novice amateur radio stations.

CLEARANCE REQUIREMENTS ARE:

* Appropriate registration documents in the name shown on the application for call letter plates.

* Application for Amateur Radio Plates (REG 583). Inspect the valid FCC license or FCC Certificate for renewal for class of operator.

The technician [DMV employee] must check the call letters on the FCC license and the call letters entered on the (REG 583). If the application is properly completed, the technician must sign the verification portion of the form or attach a photocopy of the FCC license.

* Pick up the plates on the vehicle. [Surrender your plates.] Reference: 1.505

* Collect all fees due plus fee for amateur radio plate application [$21]. DO NOT prorate the radio call letter plate fee.

* Issue 60-day Temporary Operating Permit (REG 19). Metal
"weight fee" tabs will be issued only if the vehicle is
a station wagon with commercial registration.

Key: Appropriate TTC suspense to SPU.

>
>I can agree to some of what you said. United front and all. But before
>the ARRL desides what _all_ amateurs want, maybe they could come out of
>the board room and ask a few of us?

Maybe your division's director doesn't "come out of the board room", but here in the Hudson Division we have a director who is responsive to the membership -- and available.

Steve Mendelsohn, WA2DHF, travels throught the division, attending club meetings and hamfests. He's always asking for opinions on matters he expects to come before the board, and asks for fresh ideas to bring to the rest of the board.

Steve also has an active division "cabinet" made up of all division-level appointees, SMs, section-level appointees, and selected others. Before each ARRL board meeting he holds a division cabinet meeting to determine the position of the division. Quite a number of ARRL Board policies come from these meetings, as Steve brings *into* the boardroom the desires and opinions of the membership in the Hudson Division.

If your director isn't as accessible and active as Steve then vote in someone else!

73, Andy

5080. FCC's "These Rules"

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-10 22:16:19 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9312102216.AA20488@metro.mccneb.edu>
Source record: 273456

A few comments have appeared recently dealing with the term "these rules" in context of FCC 97.403 and other applications.

Answer appears to be best described in FCC 0.406:
"0.406 (a) Format. The rules are set forth in the Code of Federal Regulations as Chapter I of Title 47. Chapter I is divided into parts numbered from 0-99. Each part, in turn, is divided into numbered sections....
"In citing the Code of Federal Regulations, the citation, 47 CFR 5.1, for example, is to para. 5.1 (in Part 5) of Chapter I of Title 47 of the Code, and permits the exact location of that rule. No citation to other rule units (e.g., subpart or chapter) is needed."

As I read this, "The Rules" includes everything in Chapter I of 47 CFR, and include ALL of the Parts. The rules governing amateur radio are in part 97 of "The Rules".

Source record: 273463

Here is another angle on the field strength calculation.
I think we are all converging on the same method of calculation,
but we have differences in our math for some reason.

The Problem: Calculate the power density at a point near the ground that is
100ft away from the top of a 70ft antenna tower. The antenna is outputing
3000 Watts at 104MHz.

Constants: 100ft = 30.8m = 3080cm
70ft = 21.5m = 2150cm
Zo of air = 377 Ohms
Wavelength of 104MHz = 2.88m

Assumptions:
1. The antenna is a simple vertical half dipole (l=.72m).
2. Since the distances we are dealing with are many wavelengths
away from the antenna, and the antenna is small compared
with these distances (0.72m vs 21.5m), we can assume the
radiation pattern is approx. spherical.
3. Ground wave reflections add in phase with the incident wave.
As soon as the wave travels 70ft or so we will have ground
wave reflections and standing waves.
These are definetly worst case assumptions, except for possible antenna
gain in the direction of the dorm window.

Formulas:
1. Surface area of sphere = SA = 4*pi*r^2
2. Incident wave power = PI = Power at Antenna

Surface Area of Sphere
(calculated at a distance r from the antenna)
3. Total power density PD = PI + PR(reflected power) = 2*PI
4. Field Strength = E = sqrt(Zo*PD)

Calculations:
1. SA = 4*3.14*3080cm^2 = 119e6 cm^2
2. PI = 3000/119e6 = 25.2uW/cm^2
3. PD = 2*25.2uW/cm^2 = 50.4uW/cm^2
4. E = sqrt(377*50.4e-6) = 138mv/cm = 13.8v/m

A power density of 50uW/cm^2 is about 20 times lower than the ANSI specified
safe power limit of 1mW/cm^2 (at 104MHz). Several things are likely to make
the actual power density lower.

1. Power actually drops of as 1/r^3 for several wavelengths around
the antenna, not the 1/r^2 that was assumed here.

2. The dorm building will probably have a metalic structure that will
tend to attenuate the power (though not nearly as much as it will
attenuate HF power).
3. Reflected power may not add to incident power it may subtract.
If there is antenna gain in the direction of the dorm, this would tend to
offset 1 and 2 above, but I would be surprised to see a field strength as
high as 13.8v/m in the dorm room.

If the origional poster is still concerned, you may be able to borrow a
field strength meter from your campus Engineering dept, or from the nearby
radio station (if you state why you want to borrow it). You would have to be
at 61.4v/m to be at the ANSI limit of 1mW/cm^2.

Cheers,
Eric

I have been thinking along the same line although I prefer a stand alone
retractable antenna so that it can be hidden out of sight when not in use. With
a dedicated unit, the car radio is safe and the antenna can be tuned for
max performance. I know there are glass mount 2m antenna similar in size to
a cell phone antenna, but I am looking for a electrically retractable whip.

VK2SG RTTY DX Notes, 10 December
VK2SG RTTY DX Notes for week ending 10 December 1993 (BID RTDX1210)
Bandpass reports this week from the USA were light. Most of the
action was reported from Central Europe.

We anxiously await the announcement from the ARRL of the results of
the vote by the DX Advisory Committee (DXAC) on the establishment of a
DXCC RTTY (Digital) Honor Roll. This vote was taken during November.

Our information this week came from 9X5LJ, I5FLN, the NJ0M Node of the
Twin Cities DX Packet Cluster Network, SP5AA, WB2CJL, ZS5S, and W5KSI.
Thanks to all for your help.

NOTE: The Effective Sunspot Number for 09 DEC 93 was 40.0.
The Full Kp Indices for 09 DEC 93 are: 2o 2- 1+ 2- 2+ 2- 1o 2-

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were reported.
Three regions were numbered: 7631 (N13W33), 7632 (N06E58), and
7633 (S18W47). Region 7631 has since lost its spot.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to mildly unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled throughout the period.

Event probabilities 11 dec-13 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 11 dec-13 dec

A. Middle Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/20/20
Minor Storm 10/10/10
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over the low
and middle latitude paths. High and polar latitude paths saw
near-normal propagation intermixed with occasional isolated
minor signal degradation, mostly during the local night sectors
and on paths transiting the sunrise sector. These conditions
will likely persist over the next several days. Near-normal
propagation should continue over the middle and lower latitude
paths. MUFs have been and likely will remain depressed by up to
approximately 20 to 30 percent.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

5087. Mountaintoppers wanted in Southeast

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-11 06:43:12 UTC
From: thales@netcom.com
Message-ID: <thalesCHuyo0.II7@netcom.com>
Source record: 273506

Hello,

I'm looking for hams interested in mountaintopping in the Southern Appalachians and vicinity (GA, NC, SC, TN). If you are interested in backpacking in and staying 1-2 nights (or more!), please contact me.

I live in Athens, GA, but would meet anywhere within a 4 hour drive. Pick your favorite mountain and lets go (I like winter camping). The January VHF contest would be a perfect time to go.

Thanks.

Brad

5088. Kenwood ts-820 questions

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-11 06:57:06 UTC
From: levin@cosmic.physics.utah.edu
Message-ID: <1993Dec11.065706.23496@math.utah.edu>
Source record: 273242

HI, I have several questions regarding my Kenwood TS-820 (with digital display) I am hoping you can all help me with this...

First, I am looking for some accesories. I don't have lots of money so trades would be nice however I can supply cash if required..

I am looking for the following: External VFO, 2 meter transverter and dc power adaptor. If you have any of these and want to get rid of them please let me know.

I would also like to know where to get replacement output tubes for this radio. Considering its age, I figure it would be a good idea to get a few while the getting is good. What type of tubes does this radio use? What brand/type would make the best replacement?

Now for some tech stuff..

I would like to know how to control the power output of the radio during vocie transmission. I know how to on CW (Just reduce car) but I don't know the proper way to do this on voice.

My radio does not seem to put out its full rated 200 watts. Any ideas on this or any way to test it. It is possible that my MFJ d eluxe versa tuner II power meter may be innacurate. I have been told not to trust the readings on these meters.

I have a Cmos super keyer II which is NOT compatable with the negative switching on the Kenwood. For any of you that have this problem, I have found a simple fix, here it is.

1. remove the phono plug from the end of your keyer cable.

2. Reverse the wires, soldering the origonal center wire to the outer connector of the plug.

3. To the center plug insert a resistor whos value is high enough to reduce the voltage presented to the keyer terminals (use a VOM and voltage divider equation) I used the higest possible value that still allowed the keyer to make the radio transmit.

4. Solder the remaining wire to the other end of this resistor.

5. Attach a diode across the terminals. This protects the keyer transistor from any potential spikes from the transmitter. (got this from the Art of Electronics)

6. Thats all there is to it. I placed the resistor and diode right in the case for the phono plug. Use some heat shrink for short

protection.

This seems to work fine and has not melted my keyer yet. If anyone has any comments on this or improvements please let me know.

Finaly, I would like to build a field strength meter. I was thinking that an opamp based circuit would be ideal for this. If anyone can help me with this I would appreciate it. I know I could buy one cheaply, but I would like to build my own.

Thanks in advance for any comments or suggestions. Please email your answers to lvin@cosmic.physics.utah.edu

I will summarize all responces.

Thanks again

Chris (KB7YOU)

5089. Recommendations on HT's

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-11 10:03:39 UTC
From: segigot@students.wisc.EDU
Message-ID: <14659.segigot@students.wisc.edu>
Source record: 273238

I'm a brand-spanking new ham, and I'm currently radioless. I've heard or seen good things about the Standard C-168A, Icom IC-W2A, and Motorolas in general. From a (relatively biased, I might add) local ham group, I recieved the general consensus that Alinco HT's aren't worth the boxes they come in. Discussions in this forum have not changed this opinion, although some people have said that they like their Alinco's. I'm not looking for flames here, but simply reviews/recommendations for HT's. I'm a college student (no extra $ here!!!), and I'd like 5W capability. 2m/440 dualband would be nice, but maybe a dream for the $ I'm willing to spend ($200 tops for 2m only, $300 for dualband). If anyone has any suggestions/help/extra radios :-), please email me with them. If I get enough, I'll compile them and post them on the forum for other new hams like me.

I'm also looking for a TNC, like a KPC-3 or PK-88.

Thanks a lot.

73, Scott Gigot N9VOM
segigot@students.wisc.edu

Now I have my ticket, but when will the FCC send me my radio?

5090. Re: 10-Codes (with 36/37 fixed)

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-11 11:23:05 UTC
From: arog@BIX.com
Message-ID: <arog.755608985@BIX.com>
Source record: 273508

In the post re: 10 Codes, 10-10 was given as "flight in progress."
10-10 is more commonly "out of service, subject to call" here on
the left.coast.

>
You can exist for a few months on a reciprocal licence but you will eventually have to take out a full UK licence. I am not sure if you can do so on the strength of your existing licence or whether you will have to sit the UK exams (not hard... multi-guess exam + 12wpm CW)

As far as bands go, some of our bands are narrower (2M is 144-146) and some don't exist over here, although we do get a 4M band as an extra. For VHF/UHF operation you need to be aware that the UK 70cm band is 430-440, repeater spacing of 1.6MHz (inputs high) with toneburst access (1750Hz), although some CTCSS operation is appearing. 2M repeaters have a 600kHz spacing, again with toneburst access. We also use 25kHz channels on 2M/70cms so try to get a rig which can handle this. I would recommend you buy a rig before you get here because the prices here tend to be quite a bit higher.

not make for a TOTALLY adversarial relationship.

>
> >Private interests had SOMETHING to do with it.
>
> They didn't start it, though...the FCC did, internally.

Not having the exact facts at hand I will accept yours. Point conceded.

Interesting point that I could agree with in principle. In practice, I
am not positive about that one. Let me think it over.

First, as I said I am not now an ARRL member. If I choose to join (again
I am SERIOUSLY considering it) he will be pestered by me night and day.
But as it stands right now _I_ don't have a director.

Futher, I am VERY impressed by the attempt of the ARRL to reach hams by
a lot of different means. Internet/Usenet conncetions as an example.
GREAT work guys! Big points for you on that one.

Again, the ARRL Guys I have met here have been helpfull in the
EXTREAM!!! Thank you to ALL you guys (& gals, not to be sexist). And I
understand that there are CompuServ addresses too. GREAT!

(some deleted)

Andy,

My point was that the ARRL _seems_ to attempt to represent _ALL_
amateurs. NOT just ARRL members. If they choose to do that then they
should take into consideration not only non-members but other groups
opinions. Not make decisions or pronouncements that tend to say to the
world "We, the ARRL are the end all to US amateurs". If you want to take
a united front to the FCC, then do so by FIRST comming to a concensus
with some other groups. THEN approach the FCC.

Maybe the ARRL has attempted this and I am unaware of it.

While the ARRL has the advantage of being large, it has the DISadvantage
of inertia!

Sure, 100 watts if you want to be on every TV in the neighborhood ;-).

Seriously, I don't do too bad with my Icom 726 and only 10 watts. Quite
often, I find myself turning down to even lower wattages. I use a homebrew
3 ele yagi up about 40 feet.

>It's quicker just to rotate the knob manually or hold down the UP/DOWN arrows.
>Saddening!
>
>- Nick

The main reason for this is the new scanner laws going into effect in the US. If a receiver can scan more than 4 *programmed* frequencies in one second, then it falls under the scanner laws and restrictions. Even though HT's aren't normally bought for their scanning capabilities, manufacturers aren't taking any chances of damaging thier overseas transciever markets. My Yeasu 2200 mobile will slowly scan programmed freqs, but blazes through the band on a start-stop frequency limit scan.

As far as mods for this type go, I'm sure it's possible on a few models, but have no particular examples... :-(

Around here, 10-10 means "negative"

10-61 and 10-62 are coffee break and lunch break respectively.
10-80 thru 10-89 are "record of <some offence>"

2530 4100 56 17% 67 177.1 56% 0.01 0.1% aus.radio

Several positive trends continue this month. Readership is up dramatically in all active newsgroups (closely following Usenet's predicted exponential growth patterns). The top newsgroup this month is rec.radio.amateur.misc, by a significant margin, followed by rec.radio.shortwave. Other newsgroups with extremely strong showings are rec.radio.swap and rec.radio.amateur.policy (meeting their respective goals of keeping for-sale messages and extended legal debate out of the main discussion newsgroup). Currently, rec.radio.amateur.homebrew leads the other new rec.radio.amateur newsgroups by a significant margin. The recently-created rec.radio.scanner is slowly gaining in readership as well, and should eventually overtake alt.radio.scanner, which it supersedes. It is expected that the newly-created newsgroups will continue to grow in readership like previously-created newsgroups such as rec.radio.info and settle out at about 60-70% propagation. If these new radio-related newsgroups still haven't reached your site, please ask your news administrator to create them (refer him/her to the new newsgroup announcements by Dave Lawrence in news.announce.newgroups or the messages posted to the new newsgroups piling up in "junk" :-). Especially point out to him/her that cost/per-reader/per-month is significantly down in all newsgroups.

The defunct newsgroup rec.radio.amateur.packet has been rmgrouped as of September 21st, 1993, and is no longer connected to the PACKET-RADIO mailing list. Netters interested in packet-radio discussion should use rec.radio.amateur.digital.misc and the HAM-DIGITAL mailing list. Propagation has continued to gradually drop in the old newsgroup, down 4 points from last month. There is a Usenet Request for Discussion (RFD) tentatively scheduled for January 1994, to either reconsider the rec.radio.amateur.digital.tcp-ip vote, merge all digital interests into rec.radio.amateur.digital, or possibly even revert back to rec.radio.amateur.packet. Watch news.announce.newsgroups (or subscribe to the rec.radio.amateur Working Group mailing list at rra-wg-request@amdahl.com) for further developments.

Note also that the defunct rec.ham-radio hierarchy reappears this month. If the newsgroups are still active at your site, please try to persuade your your news administrators to delete them as these groups have been rendered obsolete (for about 3 years now) by the rec.radio.amateur hierarchy.

5101. Precision resistors questions

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-11 21:14:20 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CHw2zx.5tF@news.Hawaii.Edu>
Source record: 273461

I have questions concerning the following two precision resistors:

1. Shallcross Akra-ohm wirewound type BX-100-J RB21B 13001F ABS

Is the resistance 13000 ohms? (1300 * 10^1 is how I interpret 13001)
What is the tolerance?

2. Resistance Products Company LFB RB15AK 1R669F

Is the resistance 1.669 ohms?
What is the tolerance?

I'm posting this for a engineer friend - I've never had reason to work
with these type of resistors.

Thanks so much!

I have wondered about that. I was about to buy an on-glass dual-band antenna because a sunroof pretty much precludes center-of-roof mounting, and I saw that the claimed antenna gain figures for such antennas were quite respectable. However, assumed that the gain claimed included the loss associated with the mount. Is this not the case? How much loss is associated with the on-glass mount, assuming that the inside portion is properly grounded?

I believe it was L. Ron Hubbard that said something like "The purpose of Art is to evoke a reaction in the viewer." ...

>I think there is. The specific pidgin idiom used is one which was commonly >used by Americans to mimic Japanese.

AND Scratchi's supposed to be from there - English ain't his native language and probably learned in the school of hard knocks to boot. Work with folks from various parts of the world and if I were to write down what they say in the way i hear them say it, I'd have to use an approach like the one used for Scratchi as well.

<wait a minute...why am i defending a cartoon character here...>

Greg, you're the one missing the point of the Scratchi posting.

1) It was to show that nothing new is going on.
2) It WAS funny because it's still true today....

Sometimes you can't make a point from the inside. You have to do it from "the outside" and Hastafisti Scratchi, The Old Man, and probably others are vehicles to do this.

These vehicles need characterization to work. This means you may have to write a character speaking in a dialect or flaw that can emphasize such a difference. F'instance:

Tiny Toon Adventures. A Popular Childrens Show.

Plucky Duck speaks with a lisp.
Fifi La Fume speaks with a French accent (and it's the same sort of pidgin French used for Pepe LePew as in things like "un pole cat d'skunk sans pew".)
Shirley Loon is a valley girl or some junk, f'sure.
Fowlmouth Rooster can only be heard saying every 3rd word at times due to language considerations.
Buster & Babs Bunny (no relation) do Impersonations that rely on stereotypical bases for the audience to recognize who's being played on today.

Hay, Arnold S. has a whole career based on his way of speaking phrases like "Hasta la vista, baby", or "I'll be back" or "Big Mistake" (yeah, i'm one of the 100 people that saw "Last Action Hero".)

How about the folks that are involved with Citizen's Band stuff or the new guys that have had to read over "robert's" signature files the last few weeks? I don't recall seeing any righteous indignation there - the C. W. McCall song "Convoy" wouldn't work if there wasn't a "typical" model of things like

Truckers and CB Radio Operator Jargon to work with either.

I won't even touch the sort of thing you could create if you based a written stereotype of an amateur radio operator based on packet radio bulletins.

your concern, while valid is misplaced. go listen to some recent George Carlin schtick (sp?) on language and its changes to protect the information receiver from hearing "displeasing" things (such as the "shell shock" to "post-traumatic stress disorder" change...) and Meredith Wilson's "The Music Man" to hear how language itself can be a music of sorts...

Hello all,

The Pennsylvania State University Amateur Radio Club is looking to sell off a Dentron MLA-2500B 2kW Linear Amplifier. The reason we are selling it is because with two HF stations, we only need two HF Linears. We are doing it in an attempt to raise some funds to purchase some new equpiment.

The amplifier works very well, and has nothing wrong with it... The tubes are not new, but they have MANY MANY hours of life left to them.

We are trying to feel the market out right now. Please make us an offer. Do it via internet or packet, through jmr@ruth.ece.psu.edu or N3HQD@W3YA.PA.USA.NOAM. These people (Joe and John, respectively) will handle your offer and be in contact with you. Thanks!

Al, N1AL, takes me to task for slandering the 6CW4 regarding intermod.

Al, I guess that we will both agree that it is POSSIBLE to build a poor converter with any technology, and that was often the case, Way Back When, from my experience. I suspect that people ran their 6CW4 at too low power (remember, they were RCA's answer to early transistors) to handle big sigs. Even more likely, the following stage died from too big sigs and not enough LO injection.

73, Bob

Source record: 273475

There has been a running battle of decimal points and dipoles and ....
concerning the field strength from an FM station at the U of Alaska on a
70-foot tower.

At the risk of appearing stupid, I make the following submission.

1) The station was "said" to be on 104.1 MHz. There **can't** be a station
on that freq at the U of AK, since they have station KUAC on 104.7 MHz and
the FCC requires 800 kHz between local stations. There IS a station KSUA
on 103.9 MHz at College, AK, licensed to Student Media, Inc.

1a) KUAC has 10.5 kW Effective Radiated Power (ERP) at 440 feet above
average terrain (HAAT). It is thus very unlikely to be on a 70-foot tower.

1b) There is conflicting data on KSUA. The 1994 M Street Radio Directory says
that they have 1 kW ERP at 120 feet HAAT, my older FCC data says they had
3kW at 0 feet HAAT, and had applied for 25 kW (height not given).

2) I will now do a calculation based on 1 kW ERP.

3) The station seems to have circular polarization, so the total ERP is
2 kW.

4a) The concept of ERP makes calculation of field strength IN THE MAXIMUM LOBE
a very simple task. Just assume that the same power was radiated from an
optimally-oriented dipole. To simplify further, increase the power by
2.14 dB and assume an isotropic radiator. ERPiso = 2 * 1.6 = 3.2 kW

4b) To obtain the power density at any distance, merely divide the isotropic-
radiator ERP by the surface area of a sphere of the desired radius. This is
because an isotropic radiator equally illuminates every part of the sphere.
Area of sphere of radius 300 m = 4 pi (300)^2 = 1 130 940 m^2
Main-lobe power density at 300 m distance = 3.2*10^3 / 1.1*10^6 =
= 2.9 W/m^2
= 0.29 mW/cm^2

5) This is nearly a worst-case number. One can imagine reflections increasing
the field, but one can also imaging absorbing matter and shielding
obstructions. While NOT BEING AN EXPERT IN THIS TECHNICAL AREA, I wouldn't
expect to see fields as high as twice the number calculated. At ground level
I'd expect to see much, much less, since the radiating elements are always
near the top of an FM station's tower and the antenna's main lobe is pointed
at the horizon (nearly).

Wasn't this simple? Wasn't this correct?

Bob w3otc@amsat.org

5109. TM732A packet hookup???

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-12 01:57:37 UTC
From: corey@ki5zw.ampr.org
Message-ID: <CHwG42.Gv8@ki5zw.ampr.org>

There are several companies that make what is commonly refered to as
"disguise" antennas.These are made to take the place of the regular
broadcast antenna,and when combined with a coupler,will also function
as a broadcast antenna.One of the companies is Antenna Specialist Co.
at 216-349-8400.Another,which I would reccommend,is STI-CO Industries
at 716-662-2680.Both of these companies will sell direct or send you
to a local distributor.One additional piece of info is that Barker
-Williamson use to make a tuner for your purpose.I dont know if they
are still in business.I should warn you that "disguise" antennas are
very expensive but work fairly good.I use an antenna specialist model
for 6 meters on my chevy and have had no problems.Good luck!

Hello Keith,I can probably help you out.There is a company called
communications specialist that can provide a ctcss encoder board
that is universal.Check with one of the radio shops up in your
area or the local radio club folks may be able to help.Worst case
call me and Ill see if I cant find some one to help out.Im at 602
-840-7810.The cost of the board is about $30.Good luck.

NOTE: The Effective Sunspot Number for 10 DEC 93 was 49.5.
The Full Kp Indices for 10 DEC 93 are: 2- 2+ 2- 3- 3- 2o 2- 1o

SYNOPSIS OF ACTIVITY

Solar activity was very low. All regions on the disk were
quiet and stable.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field was predominantly quiet to unsettled.
Some brief isolated active periods occurred at high latitudes
from 0600-1200UT.

Geophysical activity forecast: the geomagnetic field is
expected to be generally unsettled for the next three days.

Event probabilities 12 dec-14 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 dec-14 dec

A. Middle Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over the low and
middle latitude regions. However, conditions over the high and
polar latitude regions continued to be below-normal with
relatively poor propagation. Poor propagation has been
confined mostly to the night and sunrise sectors. Although
conditions may improve somewhat over the next several days,
provided geomagnetic activity remains quiet, propagation will
likely be slow to recover due to the weak state of the
ionosphere.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Divisional News

A Council meeting was held on Friday 10th December, at Amateur Radio House. J.Kentwell VK2XBR chaired the meeting; C.Miranda VK2TCM, R.Yorston VK2CAN, R.Henley VK2ZIG, T.Mills VK2ZTM, and ten visitors were present.

Tim VK2ZTM reported on the Council meeting held the previous night: amongst other things the date for the Annual General Meeting was set for 10th April 1994, with the closing date being 28th February; there was nothing further to report on the application from Vodaphone to erect a tower at the Dural site; and the petition for an Extraordinary General Meeting to discuss and vote upon a motion of no confidence in Council was discussed and referred for legal advice.

Cesar VK2TCM spoke on the confusion surrounding the proper date for the December Council meeting, as the Thursday meeting was not called in accordance with a previously-passed motion. Roger VK2ZIG stated that a quorum of Councillors had called the meeting, all Councillors had been notified of the meeting, and a quorum was present. Bob VK2CAN stated that HE had notified all Councillors of the meeting. Tim VK2ZTM asked why the scheduled meeting was changed to Thursday; Julie VK2XBR replied that he was informed that R.Harrison VK2ZTB could not attend on Friday, so the meeting date was changed.

There was a long discussion on ATV matters, with an emphasis on coming to an agreement before the SMA does it for us. A motion was carried:

That each ATV group be invited to send a representative
to a Council meeting to be held next Friday 17th
December to discuss a solution to the ATV dilemma and
further that relevant documents be distributed on or
before 15th December 1993,

with an amendment:

That Councillors with a possible conflict of interest be
barred from voting on this issue.

Tony Liolio VK2ZLT was invited to address Council re: the 6m repeater, following an invitation from Roger Harrison that he attend a Council meeting on 10th December. A motion was put:

That this meeting is at a total disbelief at the ineptitude displayed by the Divisional Secretary inasmuch as he wrote to Mr Tony Liolio VK2ZLT inviting him to a Council meeting on 10th December 1993 to discuss the donation of the 6m repeater and yet changed the meeting to the 9th December 1993 without advising him of such a change; and that Tony VK2ZLT and assistants be given access to the Dural site for the purpose of constructing and installing the 6m repeater and cavities and be allowed to remove Institute property specifically associated with the 6m repeater from the Dural site.

This motion was carried unanimously.

Council meeting dates and times were discussed, and the following motion was put:

That changes not be made to announced Council meeting dates without at least fourteen days notice of the change being given and without the agreement of a majority of Councillors.

The motion was left to lie upon the table.

Questions were then invited from the visitors.

Steve Kuhl VK2TQ asked:

(1) who authorised the security guards;

(2) who authorised Blake Dawson Waldron be appointed, and did all Councillors have knowledge of it;

(3) will the two members found not guilty be advised of the result and reimbursed for expenses; and

(4) will the Glen English decision be reconsidered given that the others were found Not Guilty.

Julie VK2XBR stated that two members were found GUILTY, not Not Guilty. Cesar VK2TCM answered point (1) along the lines that the appointment of the security guards was not discussed at a Council meeting, but apprehension on the part of some Councillors caused the decision to be made. On point (2), the solicitors Blake Dawson Waldron were suggested by Mrs Val Harrison, not a formal Council meeting. Three members of Council signed the agreement, and this agreement was never put to a Council meeting for ratification. On point (3), opinion was that reimbursement has not been considered. On point (4), the matter concerning Glen English should be overturned due to complications in carrying out the actions.

Eric VK2EFY asked what was the reason given for the referral of the EGM requisition for legal advice. Tim VK2ZTM answered that

no reason was given at the previous Council meeting.

Dave VK2KFU asked:

whereas D.Horsfall was asked to attend a Council meeting
to examine his membership status under Article 21, to
wit "conduct unbecoming or prejudicial to the interests
of the Division";

whereas D.Horsfall was there under protest, and the fact
of his attendance should not be taken as evidence of
acquiescence to the proceedings;

whereas requests have been made to the Divisional Secre-
tary, without success, to officially inform D.Horsfall
of the outcome;

whereas the Divisional Secretary announced at the EGM
that such a reply had been sent;

whereas to date D.Horsfall has not seen such a reply,
despite at least one reminder;

when is D.Horsfall going to be notified of the official verdict
of the sole charge under Section 21?

Cesar VK2TCM answered that the Divisional Secretary had indeed
stated at the EGM that such advice was in the mail.

John Telek VK2XTB stated that he had been taken to task for
putting a private "For Sale" message on the packet network,
following advice from the SMA and a solicitor that it was accept-
able, and as a result he had been barred from the VK6 packet
network. It was agreed that the matter be investigated.

On the matter of property keys for Councillors, Cesar VK2TCM said
that certain Councillors seem to have greater rights than others
as far as keys were concerned; this should be investigated and
corrected.

Julie VK2XBR will notify the other Councillors of the purpose and
date of the next Council meeting, set for Friday 17th December.

5114. Unusual request/RFI

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-12 05:20:05 UTC
From: fernando@puppsr12.Princeton.EDU
Message-ID: <1993Dec12.052005.865@Princeton.EDU>
Source record: 273444

Hi --

I'm a radio astronomer doing research at Arecibo Observatory's 305 meter radio telescope in Puerto Rico. I mostly use receivers tuned to a center frequency of 430 MHz, with a bandwidth of 10 MHz. RFI is occasionally bad, but this past month it has been positively *horrendous*, and has destroyed 90% + of my observations. I'm at wit's end, and would so very much appreciate any help...

This RFI is radar. I've thought about AWACS (it started in a bad way around the time the Haitian embargo also started). However, as I learn more about it, it seems clear that *by far* the worse times are between about 3 and 9 pm local time (one hour ahead of EST), which doesn't seem consistent with the idea of AWACS. Naval radar also seems improbable: the Naval Station on the island is usually cooperative, and they claim not to know what this is. If it were a passing ship not under their control, it probably wouldn't have stayed in range for a month now... I've been told that a PAVE PAWS radar in Georgia that looks southward operates at 420-450 MHz, but they've been on since 1987. Since they bounce signals off the ionosphere, it might in principle be plausible that they would test something new at a particular time of day... but the signals are *so* strong... The problem about estimating the strength of the signals is that we have these awkward line feeds (it's a spherical reflector) -- over 100 feet long! -- and I can't calculate gains for direct illumination of the feeds, which almost certainly is what's happening (they sit ~ 1000 feet above sea level with unimpeded view of the ocean in most directions).

I guess my specific question is whether anyone has any clues as to what might be causing abnormaly high levels of radar RFI at 430 MHz (mostly, but not limited to, during the times of ~ 3-9pm) in or near Puerto Rico.

Any help would be immensely appreciated!

Fernando

What about the Wind Profilers? These are used to characterize highl
level winds. They are in this band, use high power, but they are almost
excusively directed vertically.

Not neccessarily... If he can find a small enough computer board for it,
such as a gutted out laptop with a pcmcia slot, he could get pretty
small.. The TNCs aren't all that big, and I bet he could find a small
radio... Now the weight of all that could pose a problem to where he
would have to go with a bigger plane..

> these computers and sensors and packet radio things... That will cost

It will cost a hefty ammount of money, and it would be quite a gut
wrencher if he crashed it :(...

> >73 Bob w3otc@amsat.org
>
> Sure, 100 watts if you want to be on every TV in the neighborhood ;-).
>
> Seriously, I don't do too bad with my Icom 726 and only 10 watts. Quite
> often, I find myself turning down to even lower wattages. I use a homebrew
> 3 ele yagi up about 40 feet.
> Galen, KF0YJ, DN70

Several years ago, we had a Swan 250 250 watt 6m rig. One day
when 6 was open, we were chasing around the band and worked every
station that a guy in Oregon was working, with about the same signal
reports. We worked him, too, and he sounded quite acceptable.
He was using 250mW on a home-brewed portable into a dipole.
That's when we started looking into QRP....
Seriously, when 6 is open 10 watts will do *very* well, and
when it's closed 10kw won't make a dent in things. Where more power
will help is when it's starting to collaps, then *maybe* you can get
in a final 73, but 6 tends to close rather fast so it's iffy even
then.

Ok, this definitely falls into the "your mileage may vary" category.
I've been very unhappy with the results of using on-glass mount antennas
while some others have claimed satisfactory results. Let's look at the
theory of these antennas a bit to see if we can pinpoint potential problem
areas.

On-glass antennas are fed at a voltage node by a capacitive coupling
made up of the antenna foot, the auto glass, and a small box attached
to the inner side of the glass. Now to have the antenna end be a voltage
node, the antenna has to be an even multiple of 1/4 wave electrically
at the frequency of interest. This is usually done with a physical
halfwave rod which also has the charm that it doesn't require a groundplane
to function properly. Since the auto glass isn't well characterized, and
every individual installation is likely to be different, the inner box
usually has an adjustment to vary the capacitance for a particular
installation. This is usually a "flapper" capacitor bent closer or further
from the glass with a nylon cam. The antenna rod is usually slightly longer
than a halfwave so it can be shortened by the capacitance to resonance,
a series LC circuit.

Now since this is a high impedance point, we'd normally expect the
tuning to be quite sharp, but it usually isn't. In trying to find out
why not, we discover one of the problem areas of on-glass antennas.
That's the usually poor decoupling of the coax shield from the antenna
currents. This results in a hot shield, RF in the cabin, and a poor
resultant antenna pattern. The reason there is poor decoupling is that
the "matchbox" is equipped with a wire and little metal tab that's
supposed to "ground" the shield to the auto body. Unfortunately, this
doesn't do much good. That's because (1) we're using an antenna that
doesn't work against ground so this isn't a virtual short at VHF/UHF,

and (2) because the radio usually isn't well grounded to the body either in today's plastic dash cars so that the return likely is via the power wiring to the battery and then to the body. So we've got a nasty ground loop that includes the coax shield and the window frame. The resultant antenna pattern is unlikely to be omni, unlikely to have it's major lobe in the horizontal plane, and certainly will have less gain than a 5/8 wave antenna mounted securely through the center of the top.

The other concern with on-glass antennas is physical. They do tend to fall off or get knocked off more frequently than a thru-hole mounted antenna. As an example of both problems, I was using an Avanti on-glass antenna on 2 meters in a Chevy Monza. One night as I was driving down the interstate the rod fell off. I didn't notice, and the fellows with whom I was talking didn't notice. That's because the coax in the cabin continued to be the primary radiator. Note that the dashboard tach always noticed when I was transmitting by jumping to 6000 RPM any time I keyed down, whether the rod was in place or not.

As I said in the beginning, your mileage may vary, but I'm not going to bother with on-glass ham antennas anymore. I either drill the hole, or use a magmount expedient.

5123. Icom u-2at battery

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-12 17:25:45 UTC
From: dicken@andy.bgsu.edu
Message-ID: <CHxn2y.K8K@andy.bgsu.edu>
Source record: 273528

I have an Icom u-2at that is at least 5 years old.
The battery used for the display circuit is soldered
onto the circuit board, and is quickly nearing the
end of its life. Short of sending the radio back to
the factory to be "lost" for weeks, is there anyone
who may be familar with changing it? I am very comfortable
with opening the unit. Another question might be, should
the battery die outright, will the radio continue to work?
Thank you and happy holidays.

>
> Sorry, but it's not a matter of a vote.

I'm just trying to establish that there's a fire before we clear the theatre. So far, I haven't even seen the smoke. All we have are your statements that someone might be offended. As we can see from how the posting was variously interpreted, no one was offended, and none of the people without prior knowledge drew the racial stereotype you selected.

>>> I would hope that we would endeavor to include as many people as possible
>>> in this forum; blindly posting racially offensive material is not the
>>> way to do that.
>>
>>Greg, I think you are overreacting. While the material in Scratchi may have
>>the potential for offense, let's be clear here that someone was actually
>>offended before we send Myron away.
>
> Gee, let's make sure that someone will really get hurt before we
> yell 'fire' in a crowded theatre.

Actually, what you have done is yell "fire" in a crowded theatre. That is morally reprehensible. Especially when it isn't clear that there's any smoke at all.

All I am saying is that we should recoil from offensive material in light of an actual offense, not from the SUGGESTION of a possible offense. Clear?

> Why are you suggesting that we send Myron away?

By censuring his posting, you are effectively "sending him away" from the internet. Clearly you have stated you don't want him to post Scratchi any longer. So, you suggested it, not I.

> Don't you care anything for the First Amendment?

Yes I do. That is why I see no reason to censure Myron's posting. No one was offended, many people enjoyed it. Myron has the right to free speech within the bounds set by the internet community. I see no reason to chastise him as you have done.

> You must not, since you're the first one who suggested it.

Greg, this is not logical. Of anyone has taken steps contrary to the first amendment, it is YOU not ME.

>>All this political correctness is enough to make one puke.
>
> So you're saying that you're so uncomfortable with the ideas presented,
> and so unable to cope with them intellectually that it makes you ill?

No, I find that political correctness OVERSENSITISES and SEPARATES people from one another. If people are too cautious in what they say or think, they will never build a sense of world community. Instead, they will be overly concerned with how those "others" might take it. It is exactly the classification of "others" splits us apart. Not some imagined stereotype.

I've not seen the Quantum HT batteries, but I have had very positive
experiences with the Quantum batteries for camera flashes. As I
recall, they were high capacity gel cells with charging circuitry etc.
built in to prevent overcharging. (A photographer friend of mine
leaves hers plugged in all the time). Hope this helps.

With respect, Bill, I think you are the one who's over-reacting. In it's original form, when printed in the 50's and 60's, although not intended as racist material, it did portray, nonetheless, an offensive and racist stereotype of Japanese.

What was accepted then by the average person and what is acceptable now has obviously changed, as have many other things in our society. "Amos 'n' Andy" wouldn't get the same reaction today that it did in the forties, either.

I don't think Greg's bringing this to our attention is in any way an expression of "political correctness" - at least in the sense of trying to prevent some one from expressing an unpopular or non-mainstream view. Rather, he appears to be pointing out that many people today will find depictions of racial stereotypes as unfair, repugnant, and offensive. I find his comments to the point, and well taken.

Hi,

I'm looking for a way to transmit data over FM radio with some speed if possible.

I would appreciate some advice on what modems can be used, what protocols and what is affordable but good hardware for FM transmission.

I will do some tests with one of these FM microphones over short distance to check out Forward error control and the modem connection, but the whole idea is that it will be a digital FM broadcast station sending out various data.

Have no radio background, so if you have to use very technical words, please explain them also.

Many thanks in advance for your answers.

SB SAT @ AMSAT $ANS-345.01
AO-13 FACES LONG ECLIPSE PERIODS

HR AMSAT NEWS SERVICE BULLETIN 345.01 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-345.01

AO-13 Experiences Long Solar Eclipse Which Affect Transponder Operations
James Miller (G3RUH) of the AO-13 Command Team reports that because of the long duration of the solar eclipse periods that AO-13 is experiencing, they have been forced to severely curtail transponder operations. Some of the eclipse periods have been as long as 2 hours. Battery bus voltage has become so low that the net affect has been that there has been no battery charging from orbit to orbit. The safety threshold on the battery bus voltage is currently set 12.6 volts. When the bus voltage drops below 12.6 volts, the on-board computer shuts down the beacon and brings all the other subsystems on AO-13 to a "low-power" state. Currently, with the trans-ponders and telemetry beacons turned-off, the total current consumption on AO-13 is around 1 ampere. In attempt to remedy this low battery voltage problem, the Command Team has made an spacecraft attitude re-adjustment to Bahn Longitude 245 degrees and a Bahn Latitude of -5 degrees. But under the current solar eclipse circumstances, even this has not been sufficient to solve the problem of low battery voltage. So it was necessary to take even further steps including turning off all transponder operations on AO-13 until between Friday December 10 and Monday December 13, 13-DEC-93 around 03:28 UTC. It is hoped that this will bring AO-13 through this difficult time period, however, there is no guarantee that the above actions will be enough. It should be noted that AO-13's batteries are now 5 years old and the Command Team feels that is may be necessary to take a close look at the battery charging software and presets to determine if they need to be adjusted for the age of the batteries.

It is requested that all AO-13 users keep a close "ear" to the telemetry beacons which can be heard on a downlink frequency 145.812 MHz or 2400.646 MHz for the latest information on the transponder schedule.

The Command Team is always interested in hearing from the user any "constructive feedback" about AO-13 transponder operations.

The AO-13 Command Team ccurrnetlu consists of the following:

Peter DB2OS @ DB0FAU
James G3RUH @ GB7DDX
Graham VK5AGR @ VK5WI

IO-26 SUFFERS OBC CRASH

HR AMSAT NEWS SERVICE BULLETIN 345.02 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-345.02

IK2OVV Explains the IO-26 On-Board-Computer (OBC) Crash

After 45 days of uninterrupted BBS service on IO-26, on 8-DEC-93 at approximately 11:30 UTC, ITAMSAT IO-26 suffered a crash during a pass over Europe. IO-26 is now in an undefined status, with its trasmitter on but no MBL telemetry; the Command Team will try to regain control of the satellite in the next passes over Europe. The cause of the crash is still unclear; the Command Team is investigating on some new software used to access the BBS services. In the past, some other MICROSATs crashes were due to bugs found in the user software. ITAMSAT Command Team, while recommending users not to uplink to the satellite at this time, would like to receive reports about IO-26, especially regarding the presence of just the HDLC flags on the downlink or some sort of telemetry, either MBL or PHT style. However, after examining the memory dumps taken from IO-26, Alberto Zagni (I2KBD) and Harold Price (NK6K) have decided to begin the uploading of the high-level software to restore IHT (ITAMSAT Housekeeping Task) capability. The cause of the crash is still unknown; I2KBD and NK6K are working on the memory dumps, but the crash destroyed part of the internal logs kept by the high-level software. Since the crash happened as one of the Ground Command Stations in Milan was uplinking to the satellite using a new ground software (which has not yet been fully tested), there is chance that this was the cause of the crash. The ITAMSAT Command Team has decided not to turn the BBS on after the reloading of the software; the Team will start some Whole Orbit Data (WOD) collection in order to fully optimize the energy budget onboard the satellite. This will enable IO-26 to have higher power settings on the downlink. It is estimated that the high-level software will be working by this soon; stay tuned on the downlink for any news!

The ITAMSAT Command Team would like to thank again Harold Price (NK6K) for the great help in debugging the memory dumps and the Eyesat Command Team for helping during the initial recovery.

ITAMSAT Command Team can be reached via Internet as i2kbd@amsat.org or ik2ovv@amsat.org, and on Compuserve HAMNET.

Mode-S : MA 220 to MA 230 !<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 256 ! Blon/Blat 240/-5
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the FO-20 operating schedule:
Analog mode: 15-Dec-93 07:41 -to- 22-Dec-93 8:05 UTC

Digital mode: otherwise noted above. [JJ1WTK]

IO-26: ITAMSAT sufferred a system crash after 45 days of flawless operations. The command team is gathering data to try to determine the source of the problem. They state that the transmitter is on, but the BBS is not open.

AO-16: Operations are normal. [WH6I]

LO-19: Operations are normal. [WH6I]

KO-23: Functioning normally. There have been some questions regarding image files. When WH6I see some images on KITSAT, he trys to list them, but files on that satellite are only active for maybe 5-6 days depending on how much new material is uploaded. Therefore, by the time this status report makes it to the ANS status report, the files may be gone. Satellite image files on KITSAT have names in the form KAI?xxxx where ? is either W or N to indicate a WIDE or NARROW view image. The "xxxx" is a serial number. These files are about 350Kbytes large and can be seen in the directory in PB by hitting F4 to see the list of files generated by the satellite. They are usually in pairs with a wide and narrow view file. These files are downloaded just like anyother file. The program DISPLAY which is often up on the birds willdisplay these images, and it will display whatever there is in the xxxx.ACT file of the image, so that you can look at a partial download and decide if it is worth pursuing. [WH6I]

RS-10: After a period of inactivity, the RS-10 QSO robot is QRV again. The downlink is approx 29.403 MHz, and uplink is +/- 145.820 MHz. If you are "into" the robot receiver, your CW from the few KHz wide passband will be retransmitted on the robot's fixed frequency. The speed of your CW response is not important; it just needs to be steadily and cleanly sent. K0BJ notes that he just changed from a vertical dipole to a J-pole. It seems so far to be about as bad with QSB as the dipole, but the J-pole did seem to peak more in the longer, low-elevation parts of the pass. The next experiment K0BJ will perform is with a turnstile antenna.

POSAT: CT1ENQ would like to inform that the Portuguese satellite (POSAT) is now prepared for amateur radio use. Please contact Portuguese AMSAT group, AMSAT-PO, for more information.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

Amen!

I have been following this thread since its inception.. While I recognize that we all like to blow off a little steam on the 'net, I wonder how many of the folks who disagree with the ARRL position have taken any constructive action? In this case, constructive action is defined as:

1.. Writing a letter to the ARRL director.. even if your aren't an ARRL member..

2. Writing a letter to the FCC...

3. Writing a letter to any other individual or organization that has some influence in this matter..

I am constantly amazed at the number of people who will spend hours vehemently discussing a subject but will not spend 15 minutes and 29 cents to ensure that their opinions get to the responsible persons.. No politician, from an ARRL Division Director to the President of these U. S. will ignore a number of letters.. Especially if it is a large number of letters.

I figure that I have a right to bash the ARRL, when required. I pay $30.00 each year, for that right, when I renew my membership. So, when I disagree with League policy, I sit down and write Mr. Butler, the SE Division Director. And, I try to get everyone that I know to write a similar letter. S

So, if you want to change the ARRL position, spend that 15 minutes and 29 cents.. If you want me to support your position, give me some good

reasons and I will consider them...

And, if you want that politician (ARRL Director, in this case), to really consider your letter, you might think of something good that he has done and make sure that you thank him for that one.. "A spoon full of sugar makes the medicine go down!"

Think I will go out in the shack and play with a radio.. That's really why I got a ham license...

NOTE: The Effective Sunspot Number for 11 DEC 93 was 47.1.
The Full Kp Indices for 11 DEC 93 are not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. All the regions on
the disk are quiet and stable.

Solar activity forecast: solar activity is expected to be
very low with a slight chance for an isolated C-flare.

The geomagnetic field has been at mostly quiet levels
for the past 24 hours. A period of active conditions
occured from 0900-1200Z.

Geophysical activity forecast: the geomagnetic field is
expected to be generally unsettled for the next three days.

Influences from a coronal hole may increase levels to active
sometime late on the third day.

Event probabilities 13 dec-15 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 dec-15 dec

A. Middle Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over the low and
middle latitude regions. High and polar latitude paths
continued to see sporadic periods of below-normal propagation
conditions, although there have been improvements in these
areas over the last 24 hours. Similar conditions are expected
over the next 72 hours.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

In rec.radio.amateur.misc, tjf@beta.lanl.gov (Thomas J. Farish) writes:

>The Cable TVI saga continues.

>Well, it turned out that there was no longer any problem (so far) on any
>band but 10m (a definate improvement, but still...)
>
>Anyway, The weirdness is this. I tried several power levels with him on
>the phone to report problems and he could only hear me on SSB! I turned
>down the power to about 1 watt and he could still hear SSB on channel 13,
>but 90+ watts on CW - no problem!

It sounds like you are dealing with audio rectification. CW has
no audio associated with it, although I would imagine that you would
hear various thumps in the speaker as CW is keyed.

The high-pass filter you built is usually not necessary in cable-tv
installations. I usually recommend a common-mode choke as the best
all-round cure. Buy an FT-240-43 ferrite core. Install it by wrapping
about 10 turns onto the core, just before the cable hooks up to
the first electronic device in the system (set-top converter, VCR
or cable-ready TV). You can also purchase a common-mode choke.
The FT-240-43 core is available from Ocean State Electronics
401-596-3080. A common-mode choke is available from Starplex,
314-423-5756 (part-time business).

You might also try a common-mode choke and/or AC line filter (Radio
Shack catalog #14-1111) on the ac-line cord (TV, VCR or set-top
converter).

The ARRL Technical Information Service has several EMI/RFI information
packages available. Paper copies are available from the ARRL Technical
Department Secretary, 225 Main St., Newington, CT 06111. Send
a 9"X12" SASE with 3 units of US postage for each package required,
or send $2.00 each and we will send them postpaid. If you want one for
free, send a report of the particulars of your EMI problem to
ehare@arrl.org, AND a specific request for one or more of
the applicable packages.

EMI/RFI Package - obtain this one plus any of the others
EMI/RFI - bibliography
EMI/RFI - CATVI - Reprint from Communications Technology
EMI/RFI - Computer
EMI/RFI - Electrical
EMI/RFI - Telephone

The paper files have some information that cannot be made electronic, such as the ARRL EMI/RFI Pamphlet for the non-technical neighbor. Most of these are also available on our ARRL Electronic Mail Server, info@arrl.org. Send it a request, with HELP in the text of the message.

This information has been prepared as a membership service by the ARRL Technical Information Service.

CUBAN HAM RADIO ESCAPE

Ramon Batista, CO8BA, and sixteen other Cuban exiles are now free of dictator Fidel Castro thanks to the efforts of the Florida based Sociedad Internacional de Radio Aficionados -- SIRA. The story of Batista's escape began several weeks ago when he started to hold discrete contacts with stateside SIRA members. During these short QSO's he indicated his plans and requested information on frequencies used by maritime services. SIRA's President, Rafael Estevez, WA4ZZG picks up the story from here.

"He left on the Monday morning, early morning hours of that particular Monday. It was a row boat, there were two row boats, 14 feet each one. Two of those carrying 17 persons including one five year old girl. They rowed and when they thought they were far away from Cuba, ten international miles, actually they were about twenty to twenty two miles more or less. Then he prepared a small amateur radio rig with ten watts and a special antenna that he designed. With that antenna he called CQ, SOS, Mayday whatever you call in Spanish. Then Edilberto Salas, WA2HNO who was living down here in south Florida picked up the signals and he called the Coast Guard. Then the Coast Guard got into communications on that particular frequency. He finally was picked up by a Panamanian freighter who was advised by the Coast Guard to pick them up. Those two boats and they were taken to Jacksonville. In Jacksonville they were processed there then the day before Thanksgiving Day. Last Friday he arrived here in Miami. He is now today in the process to ask for political asylum."

Batista's heroic escape from Cuba is only part of the story. When he arrived, he brought with him some bad news about the fate of many radio amateurs still in Cuba. That story, next week.

*****
LOS ANGELES TEST IRREGULARITIES

The FCC has ordered the suspension of the accreditation of several Volunteer Examiners and has also invalidated the amateur licenses and license upgrades of twenty-one people. This, after a three month joint investigation of alleged irregularities at four VE administered test sessions here in Southern California. The tests in question occurred in the Los Angeles area in June and August of 1993 and involved both the ARRL and W5YI VEC's. As we go to air, the ARRL VEC says that it has, at the request of the government, suspended the right to test of four Volunteer Examiners. It has also unilaterally suspended the accreditation of another three VE's involved in another test session after finding other alleged irregularities in the records of the examinations administered at that test.

Neither the FCC nor the VEC's assisting in the investigation have released the names of the testing applicants or the Volunteer Examiners under scrutiny, but the FCC has publicly thanked the ARRL and W5YI VEC's for their assistance in the continuing investigation.
The FCC has stopped short of calling this a case of all-out license testing fraud, but Washington sources have indicated to Newsline that the results of the investigation may be turned over to the Department of Justice for further inquiry. Should the Justice Department find that fraud is indicated and if it seeks seeks prosecution, a lot of want to be hams and those who tested them could face an unexpected fines and imprisonment.
More on this breaking story next week.

*****
LONG ISLAND ANTENNA DEFENSE FUND

Amateur radio operators out on New York's Long Island are seeking national support to fight the local zoning board within the Town of Hempstead. On October 6th the Zoning Board of Appeals denied amateur radio operator Mark Nadel, NK2T the right to maintain his 55 foot radio tower. The reason for the denial was based on two neighbors had filed complaints about radio frequency interference to their home entertainment equipment. In other words, the town of Hempstead is saying that it is taking on the jurisdiction of the FCC and the townships lawyers add that they have the right to do just that. This, even if it means openly challenging the federal government and its communications control agency, the FCC.
The decision against Nadel is precedent setting and reads in part as follows. We quote:

"The board finds that the proposed and existing height of 55' has had a devastating effect on several of the residents. The transmission of applicants come over the telephone, television and electronic equipment of the neighbors and interfere substantially with those neighbors use of such facilities. The Board has weighed the benefit to the applicant as against the detriment to the neighbors, and finds that the detriment far outweighs any benefit to the applicant." -- end quote.

Word is that Hempstead is prepared to spend any amount of money to argue this case in all jurisdictions including the United States Supreme Court. As a result, it now appears as if the only way that Nadel can have this decision overturned is to take it to court himself. He and other hams in Hempstead have been given no other choice than to fight.
In order to help NK2T overcome this unacceptable decision an organization has been formed know as RADIO. This is an acronym for the Radio Amateur Defense & Information Organization. Its sole purpose is that of helping amateur radio operators in their

fights with town zoning problems. Regardless of the final outcome, this will be a precedent setting case. Perhaps the most important legal battle in the history of the United States Amateur Radio Service.
For this reason it is very important to support NK2T in this oncoming battle through the courts. The findings may well determine weather or not you can have a ham transmitter and an antenna, no matter where in the nation you may live.
The address for contributions is RADIO, in care of N2FF, Post Office Box 343, Williston Park, New York 11596.

*****
NOVICE PRIVILEGES AND NEW 222 MHZ RESTRICTIONS ON REPEATERS

The FCC has acted to expand privileges for Novice class licensees on the 222 MHz band as well as to create a subband protected for weak signal operators using the band. The changes enacted under the Report Order in PR Docket 92-289 are very wide in their scope and include allowing Novice operation in the entire 222-225 MHz band.
Novices currently have access to 222.10-223.91 MHz. In making the privilege expansion proposal the American Radio Relay League said that improving the scope of Novice privileges to include the entire 1.25 meter band made sense. This because Novices already are permitted to use SSB and CW on portions of the HF bands.
But the FCC has denied another proposal to allow Novices to be licensees and control operators of repeaters on both the 222 and 1240 MHz bands. The Commission had in fact proposed such privileges in an Notice of Proposed Rule Making back in 1992. At that time the ARRL argued against the idea. It said that these privileges were not justified by the level technical proficiency demonstrated by Novices on their examinations. The ARRL also argued that giving Novices the right to hold license to repeaters would blur the distinctions between the Novice and Technician class licenses.
Finally, the ARRL and weak-signal advocates have been successful in gaining a special subband established on the low end of the 222 MHz band. The League had proposed that a weak signal protected band segment be established from 222.0 to 222.15 MHz, similar to what previously existed at 222.00 to 222.50 MHz. They said that a weak-signal subband, which could not be enforced through voluntary agreements or formalized band-planning by amateurs, was necessary to allow amateurs to carry on experiments in propagation and operating techniques.
The FCC agreed that this proposal had merit and acted to codify it but in reality their action may have come to late. In some cities, so called un-coordinated "pirate" repeaters are already setting up operations in this spectrum. This, as it is vacated by coordinated systems that have been relocated elsewhere in the 1.25 meter band. While the number of these uncoordinated systems is still small it will be a problem that the FCC rather

than the Amateur Radio community will have to handle. This is because those hams who have no respect for "gentlemen agreements" on band utilization are bound to ignore the FCC regulations as well.
At airtime, no effective date for these new regulations to take effect has been announced.

*****
NEW YORK CABS GET CELLULAR TELEPHONES

The alleged need for two meter radios in New York City taxis seems to have disappeared as a results of a plan to install cellular phones in may of the city's cabs. According to a press release from Nynex, Mobile Communications, one of the city's cellular suppliers, some two hundred medallion taxi cabs have embarked on a three month pilot program to test the feasibility of having cellular pay-phones in the rider compartments of these vehicles. Passengers are able to use these cel-tels for regular phone calls, and taxi drivers have a special push-button that allows instant access to police through the city's 911 emergency access number.
As reported a few months ago, a small number of New York City taxi drivers had petitioned the Taxi and Limousine Commission to have two meter radios installed in every cab. The commission turned the drivers down. The new Nynex system seems to nullify the need for two meter radios to be installed in the city's cabs, while giving the drivers a better sense of security than any ham system could offer.

*****
CHINA ON THE HAM SATELLITES

In news about ham radio space operations, word that the Tsinghua University Amateur Radio Club of Beijing, China has announced that the Chinese Radio Sports Association has provided them with some OSCAR satellite ground station equipment. The Radio Club says that it plans to use the gear for approximately 6 months in an effort to become active on amateur satellites.
The equipment consists of a Yaesu FT-726 dual-band transceiver, a circularly polarized crossed Yagi antenna, a 70cm amplifier, a receive preamplifier, and the elevation/azimuth rotor system. OE2CAL, an Austrian amateur noted in Europe for his VHF and UHF activities, and DJ7BU are scheduled to join the radio club in their efforts to the antenna system which has been delayed due to snowy weather. Both men are currently working in Beijing.

*****
ST LOUIS RADIO HISTORY

Closer to home comes this item from the world of broadcast band DXing. Word that a piece of radio history has returned to

the radio dial in St. Louis. E.B. Stevenson, N0UIH has the story and the background on why it all came about.

"The first weekend in October brought a major shock to listeners of St. Louis radio station KUSA. Listeners expecting to hear the station at 550 on the AM dial with its CNN Headline News feed, instead were informed they were listening to KSD AM. The reversion to the KSD callsign was as a result of sale of the station along with classic rock formatted KSD FM 93.7 Mhz by Gannet Radio Division to EZ Communications, owners of KYKY 98.1 Mhz with runs an adult top 40 format. Gannet purchased KSD AM then the local NBC Radio Network Affiliate and what was then beautiful music formatted KCFM in 1979. The FM adopted the KSD FM callsign in 1980, the same year KSD AM ended its 54 year affiliation with NBC. The KSD calls were dropped from the AM on March 19th 1984 after being on the 550 spot since 1922. KUSA was originally going to be adopted by what was then KPRZ in Los Angeles, now KIIS 1150 on the AM dial earlier in 1984, but Gannet ended up transferring the calls to their St. Louis AM property which was then running the country and western music format. The KUSA call still reside on its television property in Denver, Colorado. A piece of St. Louis radio history is back."

Confusing yes, but talk about radio history repeating itself.

*****
XMAS TV

The television program titled There Really Is A Santa Claus will air on Saturday December 11th on the Discovery Channel cable television network. There Really is a Santa Claus includes exclusive footage of the North Pole Network that each year permits hospital confined children to talk directly to old St. Nick thru the magic of ham radio an amateur radio TV. The segment showing hams in action was filmed at the St. Judes Hospital Center in Fullerton, California and shows Rehab Radio Station WD6BPT in action. Look for There Really is a Santa Claus at 4 PM eastern and pacific. Consult your local cable company about finding the Discovery Channel on your cable box or TV dial.

*****
COUNTRY MUSIC HAM

You fans of country music know that entertainer Patty Loveless produces chart-topping hits. But now it can also now be told that Patty can also hold her own in a morse-code roundtable QSO. This is according to QST Magazine that reports the Kentucky born songstress is now the holder of the Amateur Radio call sign KD4WUJ.
QST says that Patty, a cousin of singer Loretta Lynn is is married to Emory Gordy Jr., W4WRO and it was Gordy that got his wife interested in the two way hobby communications. The

Gordy's make their home in Dallas Georgia where Patty is
reportedly active on 40 meter CW.
Newsline knows that you join in welcoming Patty Loveless
KD4WUJ to our world of Amateur Radio.

CUBAN HAM RADIO ESCAPE

Ramon Batista, CO8BA, and sixteen other Cuban exiles are now free of dictator Fidel Castro thanks to the efforts of the Florida based Sociedad Internacional de Radio Aficionados -- SIRA. The story of Batista's escape began several weeks ago when he started to hold discrete contacts with stateside SIRA members. During these short QSO's he indicated his plans and requested information on frequencies used by maritime services. SIRA's President, Rafael Estevez, WA4ZZG picks up the story from here.

"He left on the Monday morning, early morning hours of that particular Monday. It was a row boat, there were two row boats, 14 feet each one. Two of those carrying 17 persons including one five year old girl. They rowed and when they thought they were far away from Cuba, ten international miles, actually they were about twenty to twenty two miles more or less. Then he prepared a small amateur radio rig with ten watts and a special antenna that he designed. With that antenna he called CQ, SOS, Mayday whatever you call in Spanish. Then Edilberto Salas, WA2HNO who was living down here in south Florida picked up the signals and he called the Coast Guard. Then the Coast Guard got into communications on that particular frequency. He finally was picked up by a Panamanian freighter who was advised by the Coast Guard to pick them up. Those two boats and they were taken to Jacksonville. In Jacksonville they were processed there then the day before Thanksgiving Day. Last Friday he arrived here in Miami. He is now today in the process to ask for political asylum."

Batista's heroic escape from Cuba is only part of the story. When he arrived, he brought with him some bad news about the fate of many radio amateurs still in Cuba. That story, next week.

*****
LOS ANGELES TEST IRREGULARITIES

The FCC has ordered the suspension of the accreditation of several Volunteer Examiners and has also invalidated the amateur licenses and license upgrades of twenty-one people. This, after a three month joint investigation of alleged irregularities at four VE administered test sessions here in Southern California. The tests in question occurred in the Los Angeles area in June and August of 1993 and involved both the ARRL and W5YI VEC's. As we go to air, the ARRL VEC says that it has, at the request of the government, suspended the right to test of four Volunteer Examiners. It has also unilaterally suspended the accreditation of another three VE's involved in another test session after finding other alleged irregularities in the records of the examinations administered at that test.
Neither the FCC nor the VEC's assisting in the investigation have released the names of the testing applicants or the Volunteer Examiners under scrutiny, but the FCC has publicly thanked the ARRL and W5YI VEC's for their assistance in the

continuing investigation.
The FCC has stopped short of calling this a case of all-out license testing fraud, but Washington sources have indicated to Newsline that the results of the investigation may be turned over to the Department of Justice for further inquiry. Should the Justice Department find that fraud is indicated and if it seeks seeks prosecution, a lot of want to be hams and those who tested them could face an unexpected fines and imprisonment.
More on this breaking story next week.

*****
LONG ISLAND ANTENNA DEFENSE FUND

Amateur radio operators out on New York's Long Island are seeking national support to fight the local zoning board within the Town of Hempstead. On October 6th the Zoning Board of Appeals denied amateur radio operator Mark Nadel, NK2T the right to maintain his 55 foot radio tower. The reason for the denial was based on two neighbors had filed complaints about radio frequency interference to their home entertainment equipment. In other words, the town of Hempstead is saying that it is taking on the jurisdiction of the FCC and the townships lawyers add that they have the right to do just that. This, even if it means openly challenging the federal government and its communications control agency, the FCC.
The decision against Nadel is precedent setting and reads in part as follows. We quote:

"The board finds that the proposed and existing height of 55' has had a devastating effect on several of the residents. The transmission of applicants come over the telephone, television and electronic equipment of the neighbors and interfere substantially with those neighbors use of such facilities. The Board has weighed the benefit to the applicant as against the detriment to the neighbors, and finds that the detriment far outweighs any benefit to the applicant." -- end quote.

Word is that Hempstead is prepared to spend any amount of money to argue this case in all jurisdictions including the United States Supreme Court. As a result, it now appears as if the only way that Nadel can have this decision overturned is to take it to court himself. He and other hams in Hempstead have been given no other choice than to fight.
In order to help NK2T overcome this unacceptable decision an organization has been formed know as RADIO. This is an acronym for the Radio Amateur Defense & Information Organization. Its sole purpose is that of helping amateur radio operators in their fights with town zoning problems. Regardless of the final outcome, this will be a precedent setting case. Perhaps the most important legal battle in the history of the United States Amateur Radio Service.

For this reason it is very important to support NK2T in this oncoming battle through the courts. The findings may well determine weather or not you can have a ham transmitter and an antenna, no matter where in the nation you may live.
The address for contributions is RADIO, in care of N2FF, Post Office Box 343, Williston Park, New York 11596.

*****
NOVICE PRIVILEGES AND NEW 222 MHZ RESTRICTIONS ON REPEATERS

The FCC has acted to expand privileges for Novice class licensees on the 222 MHz band as well as to create a subband protected for weak signal operators using the band. The changes enacted under the Report Order in PR Docket 92-289 are very wide in their scope and include allowing Novice operation in the entire 222-225 MHz band.
Novices currently have access to 222.10-223.91 MHz. In making the privilege expansion proposal the American Radio Relay League said that improving the scope of Novice privileges to include the entire 1.25 meter band made sense. This because Novices already are permitted to use SSB and CW on portions of the HF bands.
But the FCC has denied another proposal to allow Novices to be licensees and control operators of repeaters on both the 222 and 1240 MHz bands. The Commission had in fact proposed such privileges in an Notice of Proposed Rule Making back in 1992. At that time the ARRL argued against the idea. It said that these privileges were not justified by the level technical proficiency demonstrated by Novices on their examinations. The ARRL also argued that giving Novices the right to hold license to repeaters would blur the distinctions between the Novice and Technician class licenses.
Finally, the ARRL and weak-signal advocates have been successful in gaining a special subband established on the low end of the 222 MHz band. The League had proposed that a weak signal protected band segment be established from 222.0 to 222.15 MHz, similar to what previously existed at 222.00 to 222.50 MHz. They said that a weak-signal subband, which could not be enforced through voluntary agreements or formalized band-planning by amateurs, was necessary to allow amateurs to carry on experiments in propagation and operating techniques.
The FCC agreed that this proposal had merit and acted to codify it but in reality their action may have come to late. In some cities, so called un-coordinated "pirate" repeaters are already setting up operations in this spectrum. This, as it is vacated by coordinated systems that have been relocated elsewhere in the 1.25 meter band. While the number of these uncoordinated systems is still small it will be a problem that the FCC rather than the Amateur Radio community will have to handle. This is because those hams who have no respect for "gentlemen agreements" on band utilization are bound to ignore the FCC regulations as well.

At airtime, no effective date for these new regulations to take effect has been announced.

*****
NEW YORK CABS GET CELLULAR TELEPHONES

The alleged need for two meter radios in New York City taxis seems to have disappeared as a results of a plan to install cellular phones in may of the city's cabs. According to a press release from Nynex, Mobile Communications, one of the city's cellular suppliers, some two hundred medallion taxi cabs have embarked on a three month pilot program to test the feasibility of having cellular pay-phones in the rider compartments of these vehicles. Passengers are able to use these cel-tels for regular phone calls, and taxi drivers have a special push-button that allows instant access to police through the city's 911 emergency access number.
As reported a few months ago, a small number of New York City taxi drivers had petitioned the Taxi and Limousine Commission to have two meter radios installed in every cab. The commission turned the drivers down. The new Nynex system seems to nullify the need for two meter radios to be installed in the city's cabs, while giving the drivers a better sense of security than any ham system could offer.

*****
CHINA ON THE HAM SATELLITES

In news about ham radio space operations, word that the Tsinghua University Amateur Radio Club of Beijing, China has announced that the Chinese Radio Sports Association has provided them with some OSCAR satellite ground station equipment. The Radio Club says that it plans to use the gear for approximately 6 months in an effort to become active on amateur satellites.
The equipment consists of a Yaesu FT-726 dual-band transceiver, a circularly polarized crossed Yagi antenna, a 70cm amplifier, a receive preamplifier, and the elevation/azimuth rotor system. OE2CAL, an Austrian amateur noted in Europe for his VHF and UHF activities, and DJ7BU are scheduled to join the radio club in their efforts to the antenna system which has been delayed due to snowy weather. Both men are currently working in Beijing.

*****
ST LOUIS RADIO HISTORY

Closer to home comes this item from the world of broadcast band DXing. Word that a piece of radio history has returned to the radio dial in St. Louis. E.B. Stevenson, N0UIH has the story and the background on why it all came about.

"The first weekend in October brought a major shock to listeners of St. Louis radio station KUSA. Listeners expecting to hear the station at 550 on the AM dial with its CNN Headline News feed, instead were informed they were listening to KSD AM. The reversion to the KSD callsign was as a result of sale of the station along with classic rock formatted KSD FM 93.7 Mhz by Gannet Radio Division to EZ Communications, owners of KYKY 98.1 Mhz with runs an adult top 40 format. Gannet purchased KSD AM then the local NBC Radio Network Affiliate and what was then beautiful music formatted KCFM in 1979. The FM adopted the KSD FM callsign in 1980, the same year KSD AM ended its 54 year affiliation with NBC. The KSD calls were dropped from the AM on March 19th 1984 after being on the 550 spot since 1922. KUSA was originally going to be adopted by what was then KPRZ in Los Angeles, now KIIS 1150 on the AM dial earlier in 1984, but Gannet ended up transferring the calls to their St. Louis AM property which was then running the country and western music format. The KUSA call still reside on its television property in Denver, Colorado. A piece of St. Louis radio history is back."

Confusing yes, but talk about radio history repeating itself.

*****
XMAS TV

The television program titled There Really Is A Santa Claus will air on Saturday December 11th on the Discovery Channel cable television network. There Really is a Santa Claus includes exclusive footage of the North Pole Network that each year permits hospital confined children to talk directly to old St. Nick thru the magic of ham radio an amateur radio TV. The segment showing hams in action was filmed at the St. Judes Hospital Center in Fullerton, California and shows Rehab Radio Station WD6BPT in action. Look for There Really is a Santa Claus at 4 PM eastern and pacific. Consult your local cable company about finding the Discovery Channel on your cable box or TV dial.

*****
COUNTRY MUSIC HAM

You fans of country music know that entertainer Patty Loveless produces chart-topping hits. But now it can also now be told that Patty can also hold her own in a morse-code roundtable QSO. This is according to QST Magazine that reports the Kentucky born songstress is now the holder of the Amateur Radio call sign KD4WUJ.
QST says that Patty, a cousin of singer Loretta Lynn is is married to Emory Gordy Jr., W4WRO and it was Gordy that got his wife interested in the two way hobby communications. The Gordy's make their home in Dallas Georgia where Patty is reportedly active on 40 meter CW.
Newsline knows that you join in welcoming Patty Loveless KD4WUJ to our world of Amateur Radio.

5138. Russian Robinson Club

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-13 10:08:27 UTC
From: victor@stack.serpukhov.su
Message-ID: <2eheur$692@push.stack.serpukhov.su>
Source record: 273539

Hello ALL

The radio amateurs-travellers club named "Russian Robinson Club" interested in world island program - IOTA is applied to separate radioamateurs, associations, funds and also clubs, interests of which are equally connected to the above mentioned club.
The club "RRC" (Russian Robinson Club) created at the beginning of 1993 rendered support in organization more than ten island arctic DX' pedition in 1993, two of which are NEW IOTA:
4K2RRC (EU 019), 4K3RRC (EU 082), 4K4RRC (AS 005), 4K5RRC (AS 025), 4K3GW (EU 161), 4K3WQ (EU 162), 4K3/RW3GW (EU 082), 4K3/RA1ZA, 4K3/RA1WQ, UW1ZZ/A (EU 082), UW1ZZ/A (EU 161), 4K4DV (AS 029).
During this year Russian island national diploma program (RRA) has been developed like national island program of Italy (IIA), Spain (IDEA), France (DIFM), Portugal (DIP), Polska (SP IOTA A).
Competitors of this program have receive already more than 120 diplomas. We greatly hope that interest to Russian national island "RRA" will be increased every year. Besides it a list with separate numbering of Russian islands according to "RRA" has been developed already.
Club "RRC" publishes magazin - report every quarter which informers about members of this club; last island, polar and sea expedition (.../mm); IOTA - News; database of Russian island stations, antarctic station (4K1); diplomas and other news.
Every Sunday at 08:00 utc 14.120 +/- QRM this club organizes different discussions.
The club "RRC" includes a great number of polar explorers, islanders, navigators which had a lot of expedition to islands, Antarctica (4K1) and (.../mm). Besides it there is a lot of radioamateurs interested in IOTA and "RRA".
At present this club experiences a great financial problems for arranging expeditions to Russian islands and other places.
There are wonderful opportunities to visit many islands among which rare available and desert, which are of great interes-ting opportunities and suggestions.

This club has many problems with industrial radio apparatus which is sometimes necessary in expeditions. Now many of radioamateurs work with home-made apparatus which often break at unsuitable moment. Sometimes there are rare possibilities

to visit islands of Arctic and Antarctic basin. The club has
a wonderful developed diploma program but financial means are
greatly need for its realization.
Council of "RRC" applies to sponsor, radioamateurs, organiza-
tions, associations, funds and clubs to render any financial
support in carrying out islands expeditions.
We shall also be thankful to all who give us any used (second-
hand) industrial radio apparatus for its further using in dif-
ferent expedition.
In all cases any sponsor will receive a description of events,
photos, slides or videofilm from the participants of DX' pedi-
tions.
The sponsors indicate in their agreement what they want to
have in return for their financial support or apparatus. All
those who will render any support in any cases they'll be
free of charge subscribers of our magazine-report "Russian
Robinson News". "RRC" invites all interested HAMs from diffe-
rent countries of the world to arrange joint expedition to the
islands of Russia.

"RRC" can help to arrange any visit to any island of Russia and
to settle all organization problems. Wait for your suggestions !

Address of head quarters: P. O. Box 3, 398000, Lipetsk, Russia.

Hello,

Last week I have uploaded the latest version Graph Packet (GP) to ucsd.edu.
It can be used in combination with a tnc/2 or a baycom modem with tfpcx.
I will upload the latest version of tfpcx 2.1 which allows you to use multiports
and SCC cards like the PA0HZP card of the BAYCOM USCC card.

Although it is HAM-public domain software, please read the notes in the
documentation.

NOTE: The Effective Sunspot Number for 06 DEC 93 was 48.3.
The Full Kp Indices for 06 DEC 93 are: 2o 1- 1+ 2o 2+ 2- 2o 1+

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7629 (S22E02) slowed its
growth and simplified magnetically. It had only a few C-class

subflares during the day. However, it remains the most interesting region on the disk.

Solar activity forecast: solar activity is expected to be low.

The geomagnetic field was generally quiet until midway in the period. Active to minor storm conditions have prevailed since.

STD: A sudden magnetic impulse was observed from Canadian magnetometers near 12:00 UTC. Geosynchronous satellites also observed the impulse, which was followed by active levels of geomagnetic activity.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled. The current disturbance should decline by early 08 December.

STD: Periods of minor storming have been observed over the middle and high latitude regions just prior to the release of this report. Additional minor (to major) storming over the middle and high latitudes will remain possible until approximately 15:00 UTC on 08 December.

Event probabilities 08 dec-10 dec

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 dec-10 dec

A. Middle Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 30/20/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/01

HF propagation conditions were normal over the low and middle latitude paths. High and polar latitude paths were generally below-normal with poor propagation conditions attributed to minor enhanced levels of auroral ionization through the night-sectors and increased levels of geomagnetic activity experienced after approximately 12:00 UTC. Poor conditions are expected to persist over the higher latitude paths, particularly on night and sunrise-crossing circuits, for the next 24 hours. Conditions should begin to improve thereafter. Middle latitude paths will see near-normal

propagation with enhanced levels of fading over night and
sunrise-crossing paths.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

From: ftpbox!mothost!binford!laidbak!tellab5!jwa@uunet.uu.net
Subject: Icom IC-745 32 memory mod
To: info-hams@ucsd.edu

Adding 16 more memories to the Icom IC-745

While installing the Willco memory board in my IC745
I noticed that it uses a 16 position rotary switch to
select the memories. The common lead to the switch
connects to Y5 which is a strobe line from logic board.
Four other contacts connect to the data bus at DB0, DB1,
DB2 and DB3. The switch uses a BCD sequence that selects
0 - F hex.

Other radios, like the Icom R71 and the IC751 use the
same logic board and they have 32 memories. If they
use the same logic then why can't the 745 have 32
memories?

I noticed that the R71 uses two IC's (IC4 and IC5) on
the matrix board that selects the memories using the
same data lines. However, the R71 uses 5 bit counter
(instead of 4). The additional bit connects to DB4.

I experimented with my 745 by connecting a diode from
Y5 to DB4 on the logic board and shure enough, the
memory selector switch selected a new bank of 16
memories.

You can use the PREAMP switch to enable/disable the
"mod" by removing the original preamp leads. A toggle
switch can be mounted on the rear apron and wired the
leads that where removed from the preamp switch. The
the empty preamp switch (which will function as a bank
select switch) should be wired in series with the diode
and the Y5 lead. The other end of the diode goes to DB4.
You can use a 1N914 low power, high speed switching diode.

Because the leads should be as short as possible, I
relocated the preamp switch to the rear apron. You can
find the signals (Y5 & DB4) on the Matrix board at P1
and J11 which is only about 6 inches away from the switch.
Re label the preamp switch "Bank 2".

When the BANK select switch is out or open, memories
1 to 16 are selected. When the button is in, memories
17 to 32 are selected.

With the Willco "no fail memory" and this modification,
I can select all 1024 memories. I have 64 banks with
16 memories in each bank. The mod also gives me access
to the 250 "Hot HF frequencies" that are pre-programmed
in the Willco board.

Subject: Mobile Unit reviews
To: info-hams@ucsd.edu

Greetings -

I'm seriously in the market for a mobile unit and am looking at
the following units -

Standard C5718DA
Alinco DR-600T
Kenwood TM-742A

I would be extremely interested in feedback from the group as to
performance, ease of use, bells & whistles and possible modifications.

If there is an ftp site I should be checking out for archive info
I'd love to hear about it.

Many thanks for any information,

73

Subject: Mods for ICOM, YAESU and KENWOOD gear
To: info-hams@ucsd.edu

Hi all.

I'm posting this for a friend who is nuts into radio hardware, so
any help would be appreciated! His name is Mark O'Leary, known
in Cork area as EI5EFB (it says here :-)

He's looking for any keyboard or hardware mods for the following
units:

ICOM ICP4ET 70 cm handheld

YAESU FT530 dual band handheld

KENWOOD TH78E ditto

Or maybe someone could point me towards some FTP site that keeps
docs/FAQs on this kind of stuff.

Replies by e-mail please (if no-one else is interested!)

Thanx in adv.

Fergus.

I have been thinking along the same line although I prefer a stand alone
retractable antenna so that it can be hidden out of sight when not in use. With
a dedicated unit, the car radio is safe and the antenna can be tuned for

max performance. I know there are glass mount 2m antenna similar in size to
a cell phone antenna, but I am looking for a electrically retractable whip.

Greg - You must not have been dry behind the ears the first time that
Scratchi letter was published (I cleaned up my first thought). I rather
enjoyed the nostalga of rereading Scratchi and I'll not allow your liberal
attitude to ruin that. Go rain on someone elses parade. Take your
politically correct narrow nose and poke it up the Clinton's backside
instead of sticking it into a part of Amateur Radio history and trying to
make it into something it is not!

>another country, but we don't own AT (which is not assigned, according to
>my Callbook).

(text/sig deleted)
~~~~~~

AT is assigned to the country of India (VU). The full prefix allocation
is ATA to AWZ. DXers may remember working such stations as AT0N or AT0U
during any of the past DX contests.

It's not considered a "parent prefix" (like VU), so you may not see a
general call listing of it in the Callbook.

If so desired, I could probably operate from India with a callsign such
as NJ1Q/AT, or AT/NJ1Q.

I must be missing something. Could somebody please explain to me how the Scratchi
article was racist? I certainly didn't read anything racist in it. Matter of
fact, I rather liked the article. It took a bit to read the "accent", but then
it took me a while to get into the swing of some of Mark Twain's works for the
same reason. And I identified with the poor fellow's only ending up with 1 out
of 10 of his students, too -- our ratio's a bit better than that, but not by much!

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7629 (S22E02) slowed its
growth and simplified magnetically. It had only a few C-class

subflares during the day. However, it remains the most interesting region on the disk.

Solar activity forecast: solar activity is expected to be low.

The geomagnetic field was generally quiet until midway in the period. Active to minor storm conditions have prevailed since.

STD: A sudden magnetic impulse was observed from Canadian magnetometers near 12:00 UTC. Geosynchronous satellites also observed the impulse, which was followed by active levels of geomagnetic activity.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled. The current disturbance should decline by early 08 December.

STD: Periods of minor storming have been observed over the middle and high latitude regions just prior to the release of this report. Additional minor (to major) storming over the middle and high latitudes will remain possible until approximately 15:00 UTC on 08 December.

Event probabilities 08 dec-10 dec

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 dec-10 dec

A. Middle Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 30/20/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/01

HF propagation conditions were normal over the low and middle latitude paths. High and polar latitude paths were generally below-normal with poor propagation conditions attributed to minor enhanced levels of auroral ionization through the night-sectors and increased levels of geomagnetic activity experienced after approximately 12:00 UTC. Poor conditions are expected to persist over the higher latitude paths, particularly on night and sunrise-crossing circuits, for the next 24 hours. Conditions should begin to improve thereafter. Middle latitude paths will see near-normal

propagation with enhanced levels of fading over night and
sunrise-crossing paths.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

From: ftpbox!mothost!binford!laidbak!tellab5!jwa@uunet.uu.net
Subject: Icom IC-745 32 memory mod
To: info-hams@ucsd.edu

Adding 16 more memories to the Icom IC-745

While installing the Willco memory board in my IC745
I noticed that it uses a 16 position rotary switch to
select the memories. The common lead to the switch
connects to Y5 which is a strobe line from logic board.
Four other contacts connect to the data bus at DB0, DB1,
DB2 and DB3. The switch uses a BCD sequence that selects
0 - F hex.

Other radios, like the Icom R71 and the IC751 use the
same logic board and they have 32 memories. If they
use the same logic then why can't the 745 have 32
memories?

I noticed that the R71 uses two IC's (IC4 and IC5) on
the matrix board that selects the memories using the
same data lines. However, the R71 uses 5 bit counter
(instead of 4). The additional bit connects to DB4.

I experimented with my 745 by connecting a diode from
Y5 to DB4 on the logic board and shure enough, the
memory selector switch selected a new bank of 16
memories.

You can use the PREAMP switch to enable/disable the
"mod" by removing the original preamp leads. A toggle
switch can be mounted on the rear apron and wired the
leads that where removed from the preamp switch. The
the empty preamp switch (which will function as a bank
select switch) should be wired in series with the diode
and the Y5 lead. The other end of the diode goes to DB4.
You can use a 1N914 low power, high speed switching diode.

Because the leads should be as short as possible, I
relocated the preamp switch to the rear apron. You can
find the signals (Y5 & DB4) on the Matrix board at P1
and J11 which is only about 6 inches away from the switch.
Re label the preamp switch "Bank 2".

When the BANK select switch is out or open, memories
1 to 16 are selected. When the button is in, memories
17 to 32 are selected.

With the Willco "no fail memory" and this modification,
I can select all 1024 memories. I have 64 banks with
16 memories in each bank. The mod also gives me access
to the 250 "Hot HF frequencies" that are pre-programmed
in the Willco board.

Subject: Mobile Unit reviews
To: info-hams@ucsd.edu

Greetings -

I'm seriously in the market for a mobile unit and am looking at
the following units -

Standard C5718DA
Alinco DR-600T
Kenwood TM-742A

I would be extremely interested in feedback from the group as to
performance, ease of use, bells & whistles and possible modifications.

If there is an ftp site I should be checking out for archive info
I'd love to hear about it.

Many thanks for any information,

73

Steve

Subject: Mods for ICOM, YAESU and KENWOOD gear
To: info-hams@ucsd.edu

Hi all.

I'm posting this for a friend who is nuts into radio hardware, so
any help would be appreciated! His name is Mark O'Leary, known
in Cork area as EI5EFB (it says here :-)

He's looking for any keyboard or hardware mods for the following
units:

ICOM ICP4ET 70 cm handheld

YAESU FT530 dual band handheld

KENWOOD TH78E ditto

Or maybe someone could point me towards some FTP site that keeps
docs/FAQs on this kind of stuff.

Replies by e-mail please (if no-one else is interested!)

Thanx in adv.

Fergus.

>Otherwise, I guess I'll just buy a magnetic mount antenna for amateur
>use -- but it sure would be nice to have a more permanent solution.

I have been thinking along the same line although I prefer a stand alone
retractable antenna so that it can be hidden out of sight when not in use. With
a dedicated unit, the car radio is safe and the antenna can be tuned for

max performance. I know there are glass mount 2m antenna similar in size to
a cell phone antenna, but I am looking for a electrically retractable whip.

Greg - You must not have been dry behind the ears the first time that
Scratchi letter was published (I cleaned up my first thought). I rather
enjoyed the nostalga of rereading Scratchi and I'll not allow your liberal
attitude to ruin that. Go rain on someone elses parade. Take your
politically correct narrow nose and poke it up the Clinton's backside
instead of sticking it into a part of Amateur Radio history and trying to
make it into something it is not!

>another country, but we don't own AT (which is not assigned, according to
>my Callbook).

(text/sig deleted)
~~~~~~

AT is assigned to the country of India (VU). The full prefix allocation
is ATA to AWZ. DXers may remember working such stations as AT0N or AT0U
during any of the past DX contests.

It's not considered a "parent prefix" (like VU), so you may not see a
general call listing of it in the Callbook.

If so desired, I could probably operate from India with a callsign such
as NJ1Q/AT, or AT/NJ1Q.

I must be missing something. Could somebody please explain to me how the Scratchi
article was racist? I certainly didn't read anything racist in it. Matter of
fact, I rather liked the article. It took a bit to read the "accent", but then
it took me a while to get into the swing of some of Mark Twain's works for the
same reason. And I identified with the poor fellow's only ending up with 1 out
of 10 of his students, too -- our ratio's a bit better than that, but not by much!

I use one for my TH-77A. It is three years old and still going
strong. It is heavy, but great for portable use and those days
when you will be helping with an event all day long. It also is
nice to get the full 5 watts on high power (12v).
The comment about the charging circuitry is correct. These are
lead acid batteries and they use an excellent charging circuit on
them.
Hope this helps.

John Welch, N9JZW, takes me to task for recommending 100 W plus to get full enjoyment from 6-m SSB/CW. He says (partial quote):

> Seriously, when 6 is open 10 watts will do *very* well, and
> when it's closed 10kw won't make a dent in things. Where more power
> will help is when it's starting to collaps, then *maybe* you can get
> in a final 73, but 6 tends to close rather fast so it's iffy even
> then.

wrong, Wrong, WRONG !!!!! With 10 kW, SIX WOULDN'T CLOSE. You could work ionoscatter about 24 hours a day with a 6- or 6-over-6 element antenna. Troposcatter would be breeze out to the point that ionoscatter became louder. You could work EME most of the time you could see the Moon, using a BIG antenna, say 16 6-element Yagis. QRP is fine for toying with a band, but QRO can change the whole picture. (and I didn't really mean TVI!)

You apparently don't remember the Big Signal from Cedar Rapids on 49.8 MHz. They had a 10 kW xmtr and were audible ALL THE TIME here in the DC area with the crummy receivers of the day and a 5-element Yagi. Their 300-meter-long rhombic didn't hurt. The NBS field station near the present Dulles airport had a similar antenna and could light a 60-mA pilot lamp from it during Es.

I have had exactly ONE (1) TVI complaint in my last 30 years on 6 meters. It was from the neighbors who have the Emerson VCR. They also radiate cable sigs badly (have they extended their cable connection with zip-cord?).

:
: 73, Bob

6CW4 (and 6DS4 sub) if run at the usual 60-70vdc, will indeed be prone to
easy over load.

Increase the kathode resistor (if none, use >150 ohms) and then raise plate
volts to 125.

Then it'll require more signal to reach the 'IMD point'

I have heard of people running em as high as 175vdc, but at 2-3ma....
I don't know how long it'll last up there....but....

Oh. If you *get* any help would you then please ask the management
at Arecibo to please cease their hassling legitimately licensed
radio amateurs in the commonwealth of Puerto Rico? Their unreasonable
request for a quiet zone (even though it probably won't be granted)
has cost a lot of people time and money. Not to mention grief.

>Rico.

Unfortunately, as much as we would like to believe that electromagnetic
emmisions are controlled by rule of international law, they really
aren't. We hams lived with something called the 'Russian Woodpecker'
for years (over the horizon radar which caused intereference in the
HF range) until the Cold War froze it to death.

Although it could be that your problem is caused by a maritime mobile
station (ship) that is from a country where emissions are not very
well-regulated, it is also possible that the activity is governmental,
and you don't have a 'need to know.'

Now, hams have gotten pretty good at DF'ing lately, and you might
try enlisting the aid of some of the amateur radio clubs around
the island to try and take bearings on the emissions.

However, as I mentioned before, Aricebo's management has managed (ahem)
to takes some positions of late that are bound to have alienated the
ham community. They probably could provide some assistance, if offered
an olive branch in return.

>Granted, things like electrical theory are um. . .abbreviated, but I think
>they are for people like me, who only have limited experience in
>electrical networks.

The concepts aren't easier. In fact they receive less in depth
treatment now than they did in earlier works, so they are actually
harder to understand. What I'm talking about is prose style. This
isn't confined to the Handbook of course, US Army tech manuals have
also had to be rewritten at a lower reading comprehension level.
This means smaller words, shorter sentences, etc. It's not quite
at the "See Spot run." level yet, but that's the direction.

>: One of the better years for the Handbook is 1962. That's the edition to
>: which I refer most often. It uses bigger words and more complex sentence
>: structure, but it should be accessable to someone who was a tenth grader
>: in 1962, or to current college graduates. It includes more ambitious
>
>Are these current college graduated assumed to have graduated in a techincal
>field. i.e. What if the graduate is a graduate in the humanities or
>natural sciences??????

The assumption is that they have a grasp of the English language. Even
college graduates today often have smaller vocabularies, and grasp of
sentence structure and internal logic, than 8th graders of 20 years ago.
This in turn leads to lower comprehension levels which then requires much
more verbose text to get across the same point that would have been grasped
easily a couple of decades ago.

>IMHO that 2.25 inch thick manual is plenty to start with.

Oh, don't get me wrong, there's still a wealth of information in the
Handbook. I just find it a less usable reference than in earlier years.
As an example of what I consider a good handbook, I'd recommend the
Bosch Automotive Handbook. It's clear, concise, and complete in a
2.54 cm thick pocket book. The important concepts, data, and forumlae
needed for effective automotive design are all in there. And they are

easily accessed thanks to excellent organization, indexing, and layout.
A radio handbook as well written and edited need be no larger.

With our current Handbook, I find myself having to apply random searches
to access particular information, and then having to slog through too
much verbage to get to the point. And despite all that verbage, fundamental
questions go begging. For example, nowhere in the current Handbook will you
find a coherent explanation of *why* an antenna radiates, though there's a
chapter on antennas. I'd say that's pretty fundamental to amateur radio
wouldn't you? Maxwell deserves better, and so do we.

Gary

God, that's a stretch. What does he do for his subscribers besides send him a
newsletter every N weeks? As for the VEC, he formed a non-profit corporation
for that specific purpose.

>But, maybe you are right, we need a second national ham group. Anyone
>wanna help me start one?

Not me; I'd rather fix the one we have.

>I said "totally".

And I meant what I said: the FCC was going to take some spectrum away from us,
facts be damned. If that isn't totally adversarial, I don't know what is.

>Private interests had SOMETHING to do with it.

They didn't start it, though...the FCC did, internally.

>Jay, I honestly hope that our relationship with the FCC is not as bad as
>you say (in fact I know it is not from the dealings our area hams have
>with the FCC). If it were, Amateur Radio would be lost.

The difference there is that the local FCC types are generally sympathetic to
ham radio...but it's not them that makes policy: it's the ones in Washington,
and it's _those_ folks who have decided that ham radio isn't worth screwing
with. They are the ones to whom we need to present a united front.

>I can agree to some of what you said. United front and all. But before
>the ARRL desides what _all_ amateurs want, maybe they could come out of
>the board room and ask a few of us?

Have you told your director what you think lately?

>seems to feel that they are the 'one true voice of all amateur radio'.
>They are NOT. They may represent a good portion, maybe a majority, but
>in NO way do they represent ALL Amateurs!

Someone does. That someone is the ARRL, by default if nothing else.

>As I said, I have been impressed of late and am considering sending the
>ARRL a dues check. However there are may organizations that represent a
>good number of amateurs (W5YI as an example).

Hate to tell you this, guy, but Fred Maia, W5YI, is not an organization - he's
a newsletter publisher.

The only groups I'm aware of that even try to be a national voice are QCWA -
which, by definition, only represents those who were hams at least 25 years
ago (and therefore neither me nor you) - and Don Stoner's NARA, which is
explicitly aimed at the new ham.

> Now, the other
>organizations have not been around as long as the ARRL and are just
>getting started. However they are growing. The age of the ARRL being the

>exclusive national ham organization is long past.

There is _NO_ other national ham organization designed for all.

>If my congressman called the FCC it would make an impact. And believe
>you, me, MY congressman is willing to listen to those of us who sent
>him to DC.

..but is your congressman aware of how hams around the country feel about issues, and the national importance of ham radio? There's a fundamental difference between Dan pickersgill, constituent, and ham radio. We need both.

>W5YI and all the other groups that have proposed to take over the
>'vanity licensing' proposal.

The League had valid points, even if the overall presentation let something to be desired. (Yes, I have let my director know what I thought of that.) Again, _none_ of those groups are for all hams; they're for some subset of hams.

> Wayne Green bashing is a usefull as ARRL
>bashing (less in fact, Wayne Green isn't claiming to be the 'one true
>voice of amateurs').

..not to mention that Wayne Green is much more of a buffoon than anyone with the League ever thought of being.

>Since when has our (amateur community) relationship with the FCC become
>totally adversarial?

220 MHz.

If you don't understand that, you have completely missed the essential bureaucratic mindset. That grab was the result of a bureaucracy run amok, and bureaucracies don't forget.

>As I have said, the ARRL is improving. (Can we get rid of incentive
>licensing now guys? Like the social programs of the 60's, it isn't in
>the national interest.) (There I said it, look out now!)

I'd flame that one, but it's been hashed over quite a bit as it is; short form answer is that while we're implementing the welfare state in ham licensing, we might as well do away with that too. (That was sarcasm.)

>No. Just honest and truly representive of its members.

Again, you totally fail to understand the bureaucratic mindset. Any group that comes across as fragmented to a bureaucrat will get completely ignored.

Hmmm....

There I go again....

Opening my mouth when I should have just sat by and waited a piece.

Thanks to the many people that took the time to drop me a note
explaining the origin of the Scratchi character. I now understand
that he was a stereotypical Japanese man and I understand how some
people may feel embarrassed of threatened by reposting old Scratchi
articles.

I also understand that many people keep their feelings much closer
to the surface than I do. I can't imagine how painful it must be
to live that way. Like ill fitting underwear, the trials of living
in our society must chafe the sensibilities of those individuals.

Perhaps that's why some of those folks seem to be so crabby.
Under similar circumstances I guess I would be too.

I don't have an answer to the PC issue. On the one hand I try
to be kind to everyone I meet, never wishing to hurt anyones feelings.
On the other hand realizing that the various ethnic groups'
characteristics have made this melting pot the nation it is.

I fear that one day it will be illegal (we will not have the freedom)
to discriminate at all. We will not be permitted to refer to anyones

heritage in any way for fear of violating their sensibilities.
Words like German, Italian, Chinese will be stricken from our vocabulary.

Before that day comes though I'll continue to remember and continue
to profit by the characteristics of the numerous ethnic groups that
live in the greater Detroit area.

For example: The fine Polish folks that live in and around Hamtramc,
Michigan. Theirs is a legacy of industrious men who worked hard
and played hard and their wives who care for their homes with so much
vigor that (even to this day) they sweep the street in front of
their home. They raised children who were quire aware of the
tradition of a fair days work for a fair days pay.

Yes, I've heard and even told some of those infamous Polish jokes.

I guess I'm a bigot.

Both for telling the occasional joke (not representative of all
Polish people) and for the stereotypical view of Polish industry
(again, not entirely representative).

ObRadio:
I think I'll try the center fed wire this weekend and see how it works
out. It sounds easy enough. Just connect the shield and the center
conductor to the hot terminal on my tuner and hope my ground system
will provide a suitable counterpoise. Can you say "RF in the shack?"

|> into in my original post thanks to errors of assumption and slipped decimals.

Yes, I did blatantly blow the fact that Gary specified a half-wave dipole rather than an isotropic radiator.

In copying numbers from my calculator to my workstation, I dropped the exponent in the power density at 100 feet expressed in mW/cm^2, which led to my final statement about the W/m^2 to mW/cm^2 conversion factor being wrong. Just as I posted the message, I got a bad feeling about the order of magnitude --- hence my immediate followup to my first post (I trust that made it out).

Anyway, we now agree about the flux and field strength at 100 feet from an isotropic radiator. In the case of the half-wave dipole, we nearly agree.

We say the flux and field strength from the isotropic radiator are:

0.02570 mW/cm^2 and 9.84 V/m.

The gain of a half-wave dipole relative to the isotropic radiator is 2.14 dB (I'm presenting this as a given --- I'll listen to counterarguments). This represents a power ratio of:

10^(2.14 / 10) = 1.6368

and a voltage ratio of:

10^(2.14 / 20) = 1.2794.

Thus, the flux and field strength from the dipole (at 100 feet) are:

0.02570 mW/cm^2 * 1.6368 = 0.04207 mW/cm^2

and

9.84 V/m * 1.2794 = 12.59 V/m

Now we differ by only 0.7dB! Certainly the difference is in the right direction, given that you assumed the flux from the dipole is evenly distributed over a cylindrical surface surrounding the dipole. It is interesting that the resulting error in field strength is only 8 percent. A single half-wave dipole just isn't very directive, eh?

Subject : Re: hypochondriac scared of cancer!

All said and done, there is one simple observation [and I'm
not sorry for bringing the 'real.world' into this.]

Where are all of the dead broadcast transmitter engineers?
Most of the cancer deaths are, in my estimation, related
to those of us that have been around that end of things
for a long while having been elbow deep into chemicals
that are now known to be real nasty, not from the RF.
There are far too many folks that have all but lived
on Mount Wilson where all of the Los Angeles TV stations
and a major number of the FM stations in this market
live... that are in fine shape for all of what they've
been exposed to.

But then, the folks that I know as well as myself are of
the school that tells station managers that they need
a new engineer when the told us that we couldn't turn
things off when there was work that needed to be done
up next to the antenna.

>and (like QTH for "where are you now") _can_ rub people the
>wrong way. Like Jay said, in Texas we always just assumed
>that a "monitoring" meant the caller was open for conversation.

>Around the Atlanta area I haven't heard CQ yet, but then again
>I haven't had much luck scareing up a contact when I "monitor".

Just breathing near some peoples repeaters (supposedly open ones)
can be grounds for getting the cold shoulder.

>But still, "monitoring" pretty simply says "Hi, I'm
>currently listening on this freq and would be willing to talk
>to some other amateur if they'd like to discuss pretty much any
>subject." Whew! Now THAT would be silly!

Around here, it tends to mean "I'll be listening for a little
while. If you would like to talk to me, feel free to. If you
know me, why don't you come on and say 'hi'." It's sort of a
passive CQ.

>MY biggest gripe is the guy yelling "testing. TESTING." and then
>does not responding when I offer to help with a signal report.
>Maybe their speakers are busted but their mic's are good?

How about 'test' means that they're testing say, the SWR on their
antenna and they just need some carrier but they don't really
want to leave dead air. Now, I could see you getting upset if
they said 'check' and then ignored you. :)

As most people have said, proper repeater behavior varies with
locality and even repeater to repeater. Listen for a while and
then talk. (listen for weeks, not minutes...)

Cheers,
David

>For the purposes of some recient proposals, I believe, W5YI represented
>itself as an organization (quoting a membership of all it's
>subscribers). And W5YI is a VEC, does he do all the work himself?

God, that's a stretch. What does he do for his subscribers besides send him a
newsletter every N weeks? As for the VEC, he formed a non-profit corporation
for that specific purpose.

>But, maybe you are right, we need a second national ham group. Anyone
>wanna help me start one?

Not me; I'd rather fix the one we have.

>I said "totally".

And I meant what I said: the FCC was going to take some spectrum away from us,
facts be damned. If that isn't totally adversarial, I don't know what is.

>Private interests had SOMETHING to do with it.

They didn't start it, though...the FCC did, internally.

>Jay, I honestly hope that our relationship with the FCC is not as bad as
>you say (in fact I know it is not from the dealings our area hams have
>with the FCC). If it were, Amateur Radio would be lost.

The difference there is that the local FCC types are generally sympathetic to
ham radio...but it's not them that makes policy: it's the ones in Washington,
and it's _those_ folks who have decided that ham radio isn't worth screwing
with. They are the ones to whom we need to present a united front.

>I can agree to some of what you said. United front and all. But before
>the ARRL desides what _all_ amateurs want, maybe they could come out of
>the board room and ask a few of us?

Have you told your director what you think lately?

>seems to feel that they are the 'one true voice of all amateur radio'.
>They are NOT. They may represent a good portion, maybe a majority, but
>in NO way do they represent ALL Amateurs!

Someone does. That someone is the ARRL, by default if nothing else.

>As I said, I have been impressed of late and am considering sending the
>ARRL a dues check. However there are may organizations that represent a
>good number of amateurs (W5YI as an example).

Hate to tell you this, guy, but Fred Maia, W5YI, is not an organization - he's
a newsletter publisher.

The only groups I'm aware of that even try to be a national voice are QCWA -
which, by definition, only represents those who were hams at least 25 years
ago (and therefore neither me nor you) - and Don Stoner's NARA, which is
explicitly aimed at the new ham.

> Now, the other
>organizations have not been around as long as the ARRL and are just
>getting started. However they are growing. The age of the ARRL being the

>exclusive national ham organization is long past.

There is _NO_ other national ham organization designed for all.

>If my congressman called the FCC it would make an impact. And believe
>you, me, MY congressman is willing to listen to those of us who sent
>him to DC.

..but is your congressman aware of how hams around the country feel about issues, and the national importance of ham radio? There's a fundamental difference between Dan pickersgill, constituent, and ham radio. We need both.

>W5YI and all the other groups that have proposed to take over the
>'vanity licensing' proposal.

The League had valid points, even if the overall presentation let something to be desired. (Yes, I have let my director know what I thought of that.) Again, _none_ of those groups are for all hams; they're for some subset of hams.

> Wayne Green bashing is a usefull as ARRL
>bashing (less in fact, Wayne Green isn't claiming to be the 'one true
>voice of amateurs').

..not to mention that Wayne Green is much more of a buffoon than anyone with the League ever thought of being.

>Since when has our (amateur community) relationship with the FCC become
>totally adversarial?

220 MHz.

If you don't understand that, you have completely missed the essential bureaucratic mindset. That grab was the result of a bureaucracy run amok, and bureaucracies don't forget.

>As I have said, the ARRL is improving. (Can we get rid of incentive
>licensing now guys? Like the social programs of the 60's, it isn't in
>the national interest.) (There I said it, look out now!)

I'd flame that one, but it's been hashed over quite a bit as it is; short form answer is that while we're implementing the welfare state in ham licensing, we might as well do away with that too. (That was sarcasm.)

>No. Just honest and truly representive of its members.

Again, you totally fail to understand the bureaucratic mindset. Any group that comes across as fragmented to a bureaucrat will get completely ignored.

Hmmm....

There I go again....

Opening my mouth when I should have just sat by and waited a piece.

Thanks to the many people that took the time to drop me a note
explaining the origin of the Scratchi character. I now understand
that he was a stereotypical Japanese man and I understand how some
people may feel embarrassed of threatened by reposting old Scratchi
articles.

I also understand that many people keep their feelings much closer
to the surface than I do. I can't imagine how painful it must be
to live that way. Like ill fitting underwear, the trials of living
in our society must chafe the sensibilities of those individuals.

Perhaps that's why some of those folks seem to be so crabby.
Under similar circumstances I guess I would be too.

I don't have an answer to the PC issue. On the one hand I try
to be kind to everyone I meet, never wishing to hurt anyones feelings.
On the other hand realizing that the various ethnic groups'
characteristics have made this melting pot the nation it is.

I fear that one day it will be illegal (we will not have the freedom)
to discriminate at all. We will not be permitted to refer to anyones

heritage in any way for fear of violating their sensibilities.
Words like German, Italian, Chinese will be stricken from our vocabulary.

Before that day comes though I'll continue to remember and continue
to profit by the characteristics of the numerous ethnic groups that
live in the greater Detroit area.

For example: The fine Polish folks that live in and around Hamtramc,
Michigan. Theirs is a legacy of industrious men who worked hard
and played hard and their wives who care for their homes with so much
vigor that (even to this day) they sweep the street in front of
their home. They raised children who were quire aware of the
tradition of a fair days work for a fair days pay.

Yes, I've heard and even told some of those infamous Polish jokes.

I guess I'm a bigot.

Both for telling the occasional joke (not representative of all
Polish people) and for the stereotypical view of Polish industry
(again, not entirely representative).

ObRadio:
I think I'll try the center fed wire this weekend and see how it works
out. It sounds easy enough. Just connect the shield and the center
conductor to the hot terminal on my tuner and hope my ground system
will provide a suitable counterpoise. Can you say "RF in the shack?"

|> that puts the field strength at the window at 11.61 V/m. the power density
|> becomes 0.0358 mW/cm^2 which is almost the same as the number I stumbled
|> into in my original post thanks to errors of assumption and slipped decimals.

Yes, I did blatantly blow the fact that Gary specified a half-wave dipole rather than an isotropic radiator.

In copying numbers from my calculator to my workstation, I dropped the exponent in the power density at 100 feet expressed in mW/cm^2, which led to my final statement about the W/m^2 to mW/cm^2 conversion factor being wrong. Just as I posted the message, I got a bad feeling about the order of magnitude --- hence my immediate followup to my first post (I trust that made it out).

Anyway, we now agree about the flux and field strength at 100 feet from an isotropic radiator. In the case of the half-wave dipole, we nearly agree.

We say the flux and field strength from the isotropic radiator are:

0.02570 mW/cm^2 and 9.84 V/m.

The gain of a half-wave dipole relative to the isotropic radiator is 2.14 dB (I'm presenting this as a given --- I'll listen to counterarguments). This represents a power ratio of:

10^(2.14 / 10) = 1.6368

and a voltage ratio of:

10^(2.14 / 20) = 1.2794.

Thus, the flux and field strength from the dipole (at 100 feet) are:

0.02570 mW/cm^2 * 1.6368 = 0.04207 mW/cm^2

and

9.84 V/m * 1.2794 = 12.59 V/m

Now we differ by only 0.7dB! Certainly the difference is in the right direction, given that you assumed the flux from the dipole is evenly distributed over a cylindrical surface surrounding the dipole. It is interesting that the resulting error in field strength is only 8 percent. A single half-wave dipole just isn't very directive, eh?

All said and done, there is one simple observation [and I'm
not sorry for bringing the 'real.world' into this.]

Where are all of the dead broadcast transmitter engineers?
Most of the cancer deaths are, in my estimation, related
to those of us that have been around that end of things
for a long while having been elbow deep into chemicals
that are now known to be real nasty, not from the RF.
There are far too many folks that have all but lived
on Mount Wilson where all of the Los Angeles TV stations
and a major number of the FM stations in this market
live... that are in fine shape for all of what they've
been exposed to.

But then, the folks that I know as well as myself are of
the school that tells station managers that they need
a new engineer when the told us that we couldn't turn
things off when there was work that needed to be done
up next to the antenna.

>wrong way. Like Jay said, in Texas we always just assumed
>that a "monitoring" meant the caller was open for conversation.

>Around the Atlanta area I haven't heard CQ yet, but then again
>I haven't had much luck scareing up a contact when I "monitor".

Just breathing near some peoples repeaters (supposedly open ones)
can be grounds for getting the cold shoulder.

>But still, "monitoring" pretty simply says "Hi, I'm
>currently listening on this freq and would be willing to talk
>to some other amateur if they'd like to discuss pretty much any
>subject." Whew! Now THAT would be silly!

Around here, it tends to mean "I'll be listening for a little
while. If you would like to talk to me, feel free to. If you
know me, why don't you come on and say 'hi'." It's sort of a
passive CQ.

>MY biggest gripe is the guy yelling "testing. TESTING." and then
>does not responding when I offer to help with a signal report.
>Maybe their speakers are busted but their mic's are good?

How about 'test' means that they're testing say, the SWR on their
antenna and they just need some carrier but they don't really
want to leave dead air. Now, I could see you getting upset if
they said 'check' and then ignored you. :)

As most people have said, proper repeater behavior varies with
locality and even repeater to repeater. Listen for a while and
then talk. (listen for weeks, not minutes...)

Cheers,
David

The tube *should* have less intermod, but if the static operating
conditions aren't right, it can have severe intermod. A usual cause
is too low a plate voltage, and/or too low a standing current.

I would take a close look at your voltage filtering
power supply capacitors. Also, you could have a
bias voltage out of tolerance. I think if you have a
way to check all of your electrolytics you might find it
and/or vacuum tubes. You might have a soft vacuum tube
which is causing an adverse effect. I am sure it is
all solvable. If you can, put the rig on
220 or 240 volts AC and use the 250 volt tap (I assume that
voltage feeds the rig plate voltages).

Source record: 273542

The Cable TVI saga continues. I posted a few months ago about my neighbor's complaints about interference with his TV (his house is wired for cable TV in every room). Well, I put up a higher vertical antenna, got the grounds (radio and ant) in good shape (I hope) and made a few simple 5-pole Butterworth filters for him (and my family TV). VIOLA! No problem - for a while. Then come the 10m contest last weekend. Yep...he answered (by telephone) on my first CQ! ;^)

Well, it turned out that there was no longer any problem (so far) on any band but 10m (a definate improvement, but still...)

Anyway, The weirdness is this. I tried several power levels with him on the phone to report problems and he could only hear me on SSB! I turned down the power to about 1 watt and he could still hear SSB on channel 13, but 90+ watts on CW - no problem!

I am running a Kenwood TS-820 through a Bencher low-pass filter and MFJ Deluxe Versa-Tuner II to a homebrew vertical antenna about 30 feet up. His house sits higher than mine, so I wanted to get the vertical above his roof level.

By the way, he has not complained about my operating 10m SSB on my inverted-V
(cut for 80m).

Any suggestions? I sure would like to use the vertical on 10m for SSB DX!

Thanks in advance,

Tom

Well, Garry, as I told you in the e-mail you sent me, a good part of my
up-jerkin', as they say, was in a part of the West where that's pretty
standard speech. As an 'owner' of that dialect, I can use it when I
damn well please.

As I also pointed out to you, it was a response to the 'flaming yer butt'
slang, in any case. Which is why I asked about the "Hampshire Hillbillies."

I have tried to carry on an intelligent conversation with you, Garry;
but you're going to have to decide whether that conversation takes
place publicly or privately.

On the other hand, why am I justifying myself to someone who carries on
two conversations, one on the net and one in e-mail, and who also sees
fit to share private e-mail (Tony's) with someone else (me) apparently
without permission?

Greg

5155. ARLP049 Propagation de KT7H

SB PROP @ ARL $ARLP049 ARLP049 Propagation de KT7H ZCZC
AP11 QST de W1AW Propagation Forecast Bulletin 49 ARLP049
From Tad Cook, KT7H Seattle, WA December 10, 1993 To all
radio amateurs

Solar activity has been up over the past month. Over the
past week, solar flux has been over 100 every day, in
addition to the flux being higher every day than the
average flux for the previous ninety days.

On Wednesday geomagnetic conditions were quite disturbed,
with the K index as high as six. The next day conditions
became very quiet, with the K index at zero over all
periods. Conditions should continue to be quiet, with
solar flux around 100 for the 10 meter contest this
weekend. Slightly disturbed conditions may return around
December 17, and then be very quiet again from December 19
through 24. We could see some very disturbed conditions
return again around December 30. Solar flux should drop
below 100 to around 90 between December 18 to 21, then
rise to around 105 after the first of the year.

Sunspot Numbers from December 2 through 8 were 85, 97, 99,
89, 95, 99 and 84, with a mean of 92.6. 10.7 cm flux was
104.3, 105.6, 105, 101, 103, 107 and 105.1, with a mean of
104.4.

For this week's path projection, we will examine a number
of circuits for the 10 meter contest this weekend.

From the center of the USA to Europe, the path does not
look promising, but if there is any opening at all it will
probably be around 1600z. To South Africa, best bets are
around 1700z, but it may be open as early as 1530z and as
late as 2030z, although the best conditions are from 1630z
to 1930z. To South America, the best time is from 1630z
to 2000z, and to Australia, from 1930z to 2330z, although
the path there does not look good. The path to Japan does
not look good either, but from 2200z to 2300z is the best
time.

From Boston to Colorado, the best time is around 1800z.
The path from San Francisco to Ohio looks very good on 10
meters, with the best bet around 1800z, but check from
1630z to 2200z. The path from Los Angeles to Atlanta

looks very good from 1630z to 2130z, peaking around 1700z
to 2030z, particularly good at 1800z. Texas to Florida
does not look very good, but check from 1800z to 2030z.

From: CSLE87@maccvm.corp.mot.com
Message-ID: <1993Dec13.162943.17158@schbbs.mot.com>
Source record: 273561

Jon - Let me amplify your point even further. I've never known any ARRL official who would not converse with a non-ARRL member amateur, or for that matter, most SWLs. Only a few of our politicians want to hear from persons who don't impact either their re-election or bank balances. As volunteers, you do try to represent ALL the US amateurs, not just your paying constituency, and that is certainly to the credit of each of the Directors and other ARRL officials. 73 WA8NVW

---------- Original Article ----------

From: jbloom@arrl.org (Jon Bloom, KE3Z)
Newsgroups: rec.radio.amateur.policy,rec.radio.amateur.misc
Subject: Re: ARRL's callsign admin position
Date: 9 Dec 93 12:38:40 EST
Organization: American Radio Relay League

In my experience, ARRL Directors spend considerably more time asking amateurs what they want than they spend "in the board room." Most Directors spend quite a few of their weekends making themselves available at hamfests and conventions throughout their Division, just so the members can buttonhole them and tell them what they should be doing. It's not their fault that all too few mwmbers bother to do so.

Let me ask you this... do you complain that your Congressperson doesn't listen to you, even if you haven't bothered to send them a letter or otherwise contact them? Of course not (I hope)! Nor should you expect ARRL Directors to be clairvoyant. You need to *talk* to them. Of course, your Director may not feel compelled to give much weight to a nonmember's complaints. (Then again, he may--I don't know.)

When ARRL presents itself to Washington as "representing amateurs," it does so in the same sense that NRA represents gun owners, or that AARP represents older Americans. No one believes that all those eligible to be members of these organizations are, in fact, members, or that all members of these organizations agree with every policy position of the organization. That would be ludicrous. But in each case, the organization is the pre-eminent representative of the community in question: amateurs for ARRL, gun owners for NRA, and older Americans for AARP.

It is also the case that ARRL members represent a good cross-section of the amateur population. From that you can resonably extrapolate that the desires of the ARRL membership in all probability reflect the desires of the amateur population at large. At least, there is no *better* indication of those wishes. Therefore, when ARRL policy reflects the merbership's wishes, it most likely reflects the wishes of the community as a whole, too.

So, the bottom line is this: ARRL members who contact their Directors to let their thoughts be heard have a disproportionate influence over the direction of Amateur Radio. But since full ARRL membership is open to anyone with a license, and since the Directors can easily be contacted, anyone who doesn't make their voice heard has only themselves to blame.

>interpreted, no one was offended, and none of the people without prior
>knowledge drew the racial stereotype you selected.

Well, there may not have been a fire after the initial posting and
Greg's response, but I have to say that from my perspective the
following responses have been totally unbelievable and graphically
illustrate the reasons why Greg was justified in being concerned about
the issue.

Retreating into name calling over "Political Correctness" does nothing
at all to address the base issue---namely the insensitivity and
intolerance that some hams express *in public forums* towards people
who are not "like them"---newcomers, no code technicians, females,
ethnic minorities, homosexuals, whatever. It seems only good manners
to be aware of who one's (worldwide) audience is before opening up on
the air or on Usenet.

For me, the original Scratchi posting was not particularly offensive
since I didn't know any of the history. In that lack of context,
Greg's original response seemed perhaps a little over-earnest. With
the later contextual explanations his reaction seems more justified to
me, and I think it admirable that he feels motivated to stand up on
matters that concern him. It certainly is the case, however, that we
have had much more blatant examples of racial insensitivity in this
forum in the past.

I think that this is becoming an issue for rec.radio.amateur.policy
and have redirected followups there.

Subject: Kenwood ts-820 questions
To: info-hams@ucsd.edu

HI, I have several questions regarding my Kenwood TS-820 (with
digital display) I am hoping you can all help me with this...

First, I am looking for some accesories. I don't have lots of money
so trades would be nice however I can supply cash if required..

I am looking for the following: External VFO, 2 meter transverter
and dc power adaptor. If you have any of these and want to

get rid of them please let me know.

I would also like to know where to get replacement output tubes for this radio. Considering its age, I figure it would be a good idea to get a few while the getting is good. What type of tubes does this radio use? What brand/type would make the best replacement?

Now for some tech stuff..

I would like to know how to control the power output of the radio during vocie transmission. I know how to on CW (Just reduce car) but I don't know the proper way to do this on voice.

My radio does not seem to put out its full rated 200 watts. Any ideas on this or any way to test it. It is possible that my MFJ d eluxe versa tuner II power meter may be innacurate. I have been told not to trust the readings on these meters.

I have a Cmos super keyer II which is NOT compatable with the negative switching on the Kenwood. For any of you that have this problem, I have found a simple fix, here it is.

1. remove the phono plug from the end of your keyer cable.

2. Reverse the wires, soldering the origonal center wire to the outer connector of the plug.

3. To the center plug insert a resistor whos value is high enough to reduce the voltage presented to the keyer terminals (use a VOM and voltage divider equation) I used the higest possible value that still allowed the keyer to make the radio transmit.

4. Solder the remaining wire to the other end of this resistor.

5. Attach a diode across the terminals. This protects the keyer transistor from any potential spikes from the transmitter. (got this from the Art of Electronics)

6. Thats all there is to it. I placed the resistor and diode right in the case for the phono plug. Use some heat shrink for short protection.

This seems to work fine and has not melted my keyer yet. If anyone has any comments on this or improvements please let me know.

Finaly, I would like to build a field strength meter. I was thinking that an opamp based circuit would be ideal for this. If anyone can help me with this I would appreciate it. I know I could buy one cheaply, but I would like to build my own.

Thanks in advance for any comments or suggestions. Please email your answers to lvin@cosmic.physics.utah.edu

I will summarize all responces.

Thanks again

Chris (KB7YOU)

Subject: Pasadena CA Special Event Station
To: info-hams@ucsd.edu

On Sunday, 12 December 1993, the Pasadena Radio Club will field a special
event station to celebrate the rebuilding of the beautiful 80 year old
Colorado Street Bridge over the Arroyo Seco just south of the Rose Bowl.

The station will be active from 10:00 a.m. PST (1800 UTC) to 4:00 p.m. PST
(2400 UTC) on three bands:

21.335 MHz (+/-)

14.260 MHz (+/-)

147.150 MHz repeater (W6VIO) (+600 KHz, PL 131.8)

For a souvenir certificate, send a QSL and $1 to

Subject: Scratchi, January, 1960
To: info-hams@ucsd.edu

I ENJOYED reading Myron's posting.

Scratchi was previously totally unknown to me, so I just read what was
there.

I interpreted it as a commentry on the different interests and
viewpoints of different generations. It said that two different
generations do not understand each other, and can fail to predict this.
It did not seem to attack either generation.

I thought there was a strong element of lampooning old fashioned
stereotype characterisation.

Perhaps Myron's parody is a little too subtle for everyone to
recognise it ? Even if he now states his intent, no matter what that
intent was, not everyone will believe him. We will never know with
certainty.

Foreigners and children have the ability to see things, and ask
questions that are too fundamental for others to notice (or dare)

Cheers
David GM4ZNX

| Geomagnetic Field |Fri|Sat|Sun|Mon|Tue|Wed|Thu|Fri|Sat|Sun| Anomaly |
| Conditions | Given in 8-hour UT intervals | Intensity |
|_____________________________________________________________________|

CONFIDENCE LEVEL: 65%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

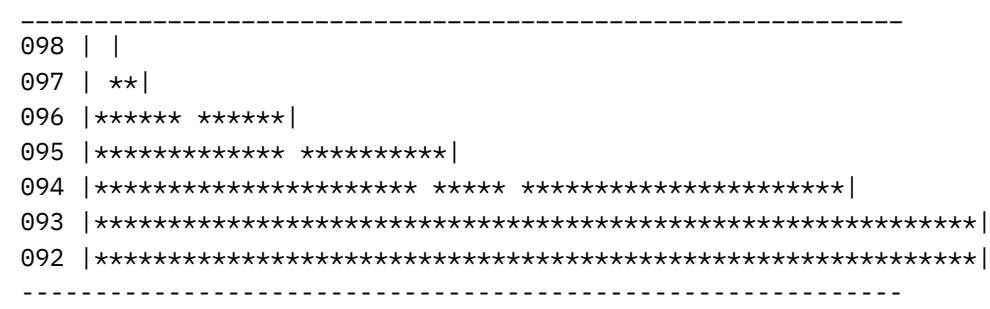

Chart Start: Day #284

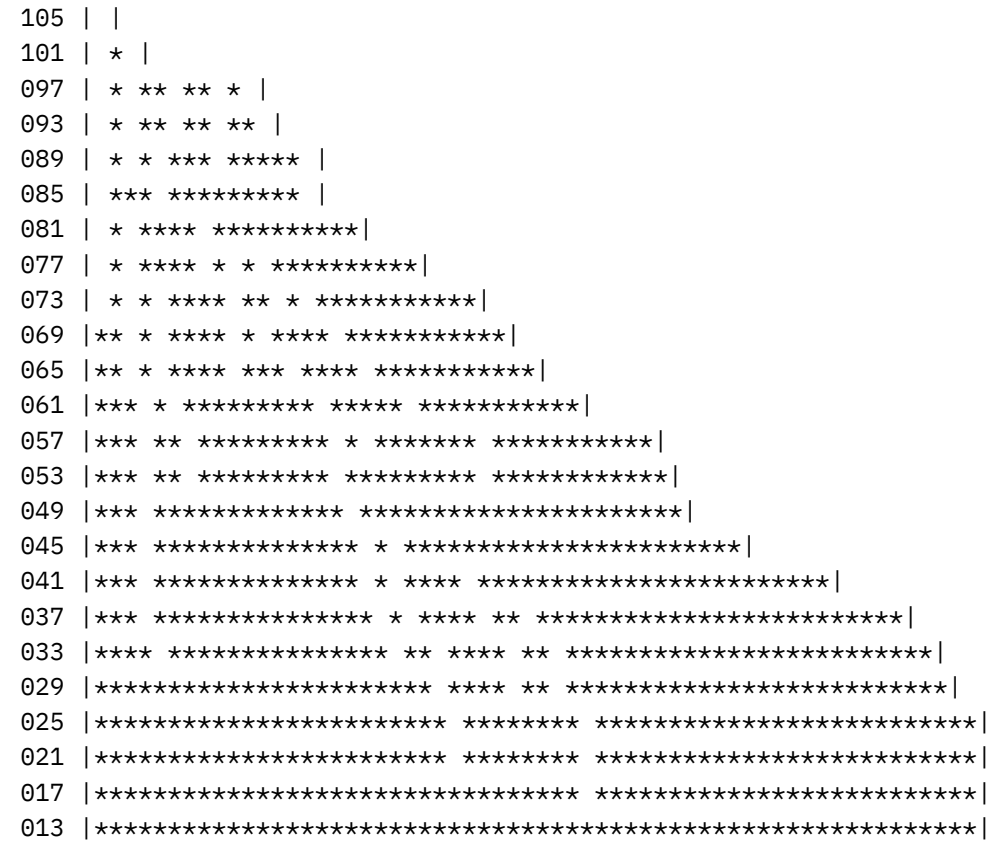
NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS



```
------------------------------------------------------------
Chart Start: Day #283

NOTES:
The graphical chart of sunspot numbers is created from the
daily sunspot number counts as reported by the SESC.

Just to point out that the Scratchi column was controversial during the
time it was being published too. I distinctly remember an exchange of
letters to the editor arguing over the point.

Anyone remember the "Heinrich Schnibble" items from Saturday Evening Pest of
the same period?

Subject: Kenwood ts-820 questions
To: info-hams@ucsd.edu

HI, I have several questions regarding my Kenwood TS-820 (with
digital display) I am hoping you can all help me with this...

First, I am looking for some accesories. I don't have lots of money
so trades would be nice however I can supply cash if required..

I am looking for the following: External VFO, 2 meter transverter
and dc power adaptor. If you have any of these and want to

get rid of them please let me know.

I would also like to know where to get replacement output tubes for this radio. Considering its age, I figure it would be a good idea to get a few while the getting is good. What type of tubes does this radio use? What brand/type would make the best replacement?

Now for some tech stuff..

I would like to know how to control the power output of the radio during vocie transmission. I know how to on CW (Just reduce car) but I don't know the proper way to do this on voice.

My radio does not seem to put out its full rated 200 watts. Any ideas on this or any way to test it. It is possible that my MFJ d eluxe versa tuner II power meter may be innacurate. I have been told not to trust the readings on these meters.

I have a Cmos super keyer II which is NOT compatable with the negative switching on the Kenwood. For any of you that have this problem, I have found a simple fix, here it is.

1. remove the phono plug from the end of your keyer cable.

2. Reverse the wires, soldering the origonal center wire to the outer connector of the plug.

3. To the center plug insert a resistor whos value is high enough to reduce the voltage presented to the keyer terminals (use a VOM and voltage divider equation) I used the higest possible value that still allowed the keyer to make the radio transmit.

4. Solder the remaining wire to the other end of this resistor.

5. Attach a diode across the terminals. This protects the keyer transistor from any potential spikes from the transmitter. (got this from the Art of Electronics)

6. Thats all there is to it. I placed the resistor and diode right in the case for the phono plug. Use some heat shrink for short protection.

This seems to work fine and has not melted my keyer yet. If anyone has any comments on this or improvements please let me know.

Finaly, I would like to build a field strength meter. I was thinking that an opamp based circuit would be ideal for this. If anyone can help me with this I would appreciate it. I know I could buy one cheaply, but I would like to build my own.

Thanks in advance for any comments or suggestions. Please email your answers to lvin@cosmic.physics.utah.edu

I will summarize all responces.

Thanks again

Chris (KB7YOU)

:-) As long as the lights don't dim (too much) when you key the transmitter,
:-) aren't you operating QRP?

Subject: Pasadena CA Special Event Station
To: info-hams@ucsd.edu

On Sunday, 12 December 1993, the Pasadena Radio Club will field a special
event station to celebrate the rebuilding of the beautiful 80 year old
Colorado Street Bridge over the Arroyo Seco just south of the Rose Bowl.

The station will be active from 10:00 a.m. PST (1800 UTC) to 4:00 p.m. PST
(2400 UTC) on three bands:

21.335 MHz (+/-)

14.260 MHz (+/-)

147.150 MHz repeater (W6VIO) (+600 KHz, PL 131.8)

For a souvenir certificate, send a QSL and $1 to

Subject: Scratchi, January, 1960
To: info-hams@ucsd.edu

I ENJOYED reading Myron's posting.

Scratchi was previously totally unknown to me, so I just read what was
there.

I interpreted it as a commentry on the different interests and
viewpoints of different generations. It said that two different
generations do not understand each other, and can fail to predict this.
It did not seem to attack either generation.

I thought there was a strong element of lampooning old fashioned
stereotype characterisation.

Perhaps Myron's parody is a little too subtle for everyone to
recognise it ? Even if he now states his intent, no matter what that
intent was, not everyone will believe him. We will never know with
certainty.

Foreigners and children have the ability to see things, and ask
questions that are too fundamental for others to notice (or dare)

Cheers
David GM4ZNX

| Geomagnetic Field |Fri|Sat|Sun|Mon|Tue|Wed|Thu|Fri|Sat|Sun| Anomaly |
| Conditions | Given in 8-hour UT intervals | Intensity |
|_____________________________________________________________________|

CONFIDENCE LEVEL: 65%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

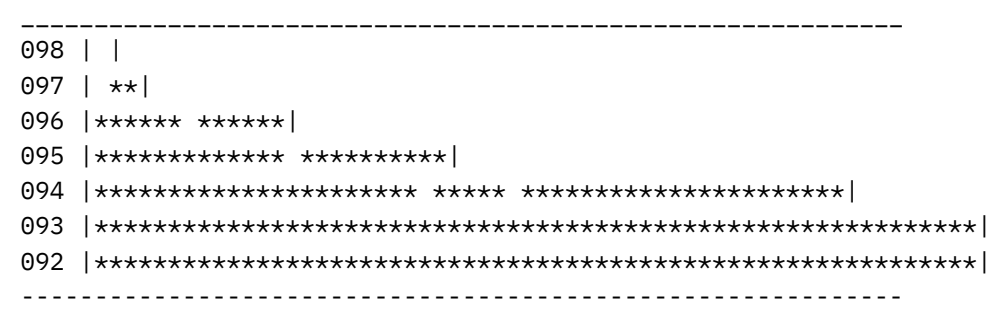

Chart Start: Day #284

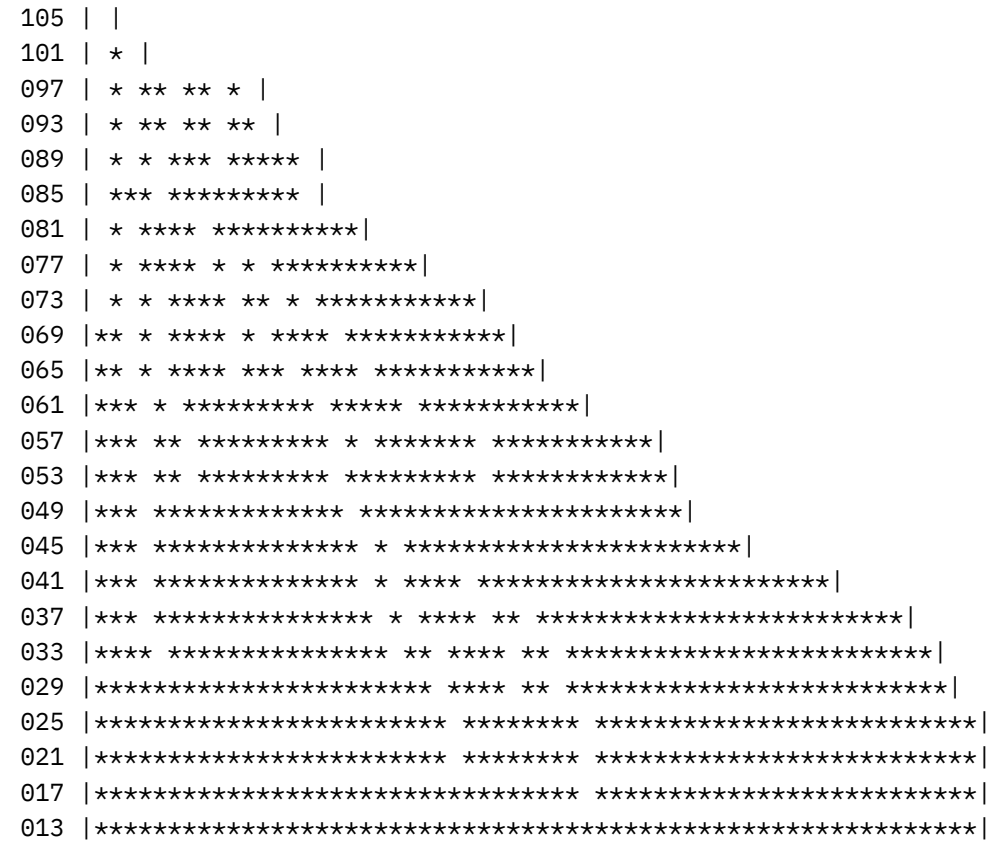
NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS



```
------------------------------------------------------------
Chart Start: Day #283

NOTES:
The graphical chart of sunspot numbers is created from the
daily sunspot number counts as reported by the SESC.

Subject : Re: Scratchi, January, 1960

Just to point out that the Scratchi column was controversial during the
time it was being published too. I distinctly remember an exchange of
letters to the editor arguing over the point.

Anyone remember the "Heinrich Schnibble" items from Saturday Evening Pest of
the same period?

ebs@crystal.cirrus.com Mon Dec 13 10:41:47 1993 rightly complains about my
math...
I said
>>4b) To obtain the power density at any distance, merely divide the isotropic-
>>radiator ERP by the surface area of a sphere of the desired radius. This is
>>because an isotropic radiator equally illuminates every part of the sphere.
He said
>The origional distance given was 100ft or ~30m.
I said
>> Area of sphere of radius 300 m = 4 pi (300)^2 = 1 130 940 m^2
>> Main-lobe power density at 300 m distance = 3.2*10^3 / 1.1*10^6 =
>> = 2.9 W/m^2 <<should be mW/m^2
>> = 0.29 mW/cm^2 << uW/cm^2
He said
>Using your 300m number this should be 2.8mW/m^2, or .28uW/cm^2. This is a very small
>number, but it is consistant with your 300m distance instead of the 30m. If you use
>the 30m number, you will get 28.3uW/cm^2 which is right in there with the latest
>numbers we have all been calculating.
I said
>>Wasn't this simple? Wasn't this correct?
He said
>Well, close. :-)

Criticism accepted.....

Harry,

I have a QUANTUM battery I bought about 1 1/2 years ago. I like it very much. It is a quality piece of equipment, though not cheap. It is very well made and the company will replace the insides when the battery no longer will take a charge. It is much better than NiCads as lead-acid batteries hold a charge longer (a NiCad never seems to be charged when you really need it). Also, it certainly lasts a long time when in use. Another advantage is that you can power two HTs off of it at the same time (just have to buy a second adapter for the other HT).

I also have a Powerpac+ 6V pack I bought from W&W Associates in NY (they advertise in all the ham mags) that I use for my camcorder. It is much less expensive than the QUANTUM and comes on a nice nylon web belt. It is available in 12V and 6V models for HTs and camcorders and other equipment. It plugs into the charger with a cigarette lighter plug which is convenient as you can also plug it into your vehicle's lighter.

Although these batteries are somewhat heavy, you get used to it. At an air show this summer our radio club provided communications. I was outfitted with my QUANTUM, HT, Powerpac+, camcorder and Nikormat 35MM camera (made of metal, not plastic) and fannypack (spare pack of cigarettes, film, poncho, water bottle, speaker mike and such). Lots of belts and straps and noticeable weight. I got used to it, but have to admit it felt pretty good when I took all the stuff off. Best of all, I didn't have to worry about running out of power for the HT or the camcorder.

I would have no qualms about recommending the QUANTUM battery. I understand they have quite a good reputation in the photographic world which I think was their original market; making batteries to power flash units. The manual advises not leaving the battery hooked up to the charger for more than 3 days at one time. No one I know of with a QUANTUM has had any complaints.

73,

5165. FM stories wanted for QST

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-13 16:39:25 UTC
From: bbattles@arrl.org
Message-ID: <2694@arrl.org>
Source record: 273564

As conductor of the FM column in QST magazine, I'm working on a possible upcoming article about operating VHF/UHF FM from outside the US. The idea is to let VHF/UHF FM users know what kinds of things (good and not-so-good) can be expected if, for example, they bring a hand-held transceiver along on a vacation or business trip to the Caribbean, Europe, Asia, Australia, etc.

If anyone has had a FIRST-HAND opportunity with operating VHF/UHF FM outside the continental US, please shoot me a note about your personal experience. I'd like to hear about obtaining licensing/operating permission, use of repeaters/simplex, popular bands/frequencies, unusual operating practices, bringing equipment into other countries, if social contacts resulted, etc. Perhaps I'll be able to "anthologize" several people's stories in one column or in serial form. Depends on the response.

Reminder: I don't like to write the column; it's a forum for *you*! We want ARRL Members from all over the world to share your thoughts on Amateur Radio FM operating and technology. We're always looking for *any* interesting stories, anecdotes, suggestions, comments, case histories, photographs, opinions, etc, for the FM column... so send 'em in!

Thanks for your help and happy holidays!

5166. Reference for xmit tubes?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-13 16:47:34 UTC
From: molson@bml4380.cpg.cdc.com
Message-ID: <CHzFzA.Hw3@cdsmail.cdc.com>
Source record: 273418

Can anyone point me to a reference for transmitting tubes?
I used to have the RCA Transmitting Tube Manual but it
took the long hike with a lot of my other "old" stuff.

Now I need information about the 4X and 4CX series
of xmit tubes: 4X150 series, 4CX250 and 4CX350 series,
and I cannot find anything but cursory information
about these.

I suppose I could check the library but I doubt they
carry manuals as old as these. I sure wish I hadn't
been so zealous in getting rid of my old "junk"...

Thanks!

I'm looking for a good logging program. It doesn't have to be contest
oriented, I'm looking for something that has useful features and
capabilities.

Logic and CT come to mind as possibly the two top candidates.

Anyone out there have any comments on those (or any other) programs?

Thanks,
Lee KD1SQ
(Please email comments to me directly as well as
to the group, thanks. lee@tosspot.sv.com)

>from these meetings, as Steve brings *into* the boardroom the desires and
>opinions of the membership in the Hudson Division.

This is a perfect example of the old boy network in action. The "cabinet"
is composed of Steve's appointees. Naturally they reflect his own views
to a large extent. While the intent may be to keep a large number of eyes
and ears out in the division, and that's good, the result is often, though
not certain in this particular case, to be more of an amen chorus from
the choir. The current field organization is machine politics at its
most raw.

The problem with the League structure as I see it is that it's a
one party state controlled mainly by the apparatchiki. It needs a
strong loyal opposition to keep it vigorous and honest. I think
more directors would help, and directors drawn not just on geographic
sections but also from interest groups in amateur radio. If we had
a director from the DX community, a director from the packet community,
a director from the repeater community, etc in addition to the geographic
sections, we'd likely get a more responsive organization. I also think
it would be good if members of the field organization were also elected
by the groups they would serve, IE traffic people would select their
managers etc. This happens to an extent informally now, but I think
it should be more of a formalized "merit board" type of thing to
reduce the machine politics in the present field organization.
(Lord knows though that it's hard enough to find *any* volunteers
to take some of these jobs.)

RED FLAG...RED FLAG...

Exactly HOW is the house wired for cable in every room? If the
house cable wiring uses one or more of the typical 75ohm cable
spitters and then has the cable termninated to a wall jack in
each room, then each of the wall jacks that do NOT have a TV
plugged into it SHOULD then have a dummy 50ohm terminating plug
pluged in. If that's not the case, then each of the unterminated
wall plug appearances can serve as a point of leakage either into
or from the neighbors TV house wiring.

: : (remember, they were RCA's answer to early transistors) to handle big sigs.
: : Even more likely, the following stage died from too big sigs and not enough
: : LO injection.

: 6CW4 (and 6DS4 sub) if run at the usual 60-70vdc, will indeed be prone to
: easy over load.

: Increase the kathode resistor (if none, use >150 ohms) and then raise plate
: volts to 125. Then it'll require more signal to reach the 'IMD point'

: I have heard of people running em as high as 175vdc, but at 2-3ma....
: I don't know how long it'll last up there....but....

Gee, even 70 volts at 2-3 mA is 140-210 mW which is higher power than most
low-noise RF transistors run. Also, tubes, like FETs, are square-law
devices, so tend to have lower third-order IMD than bipolar transistors.
I agree with Bob that if there's a problem, it's probably with the mixer,
not the 6CW4 RF amp.

There are good reasons for terminating unused cables (e.g. ghosting due to reflections), but I don't think RFI is one of them. The amount of RF leaking into the tiny connector opening would be close to nil. Cable TVI is usually due to common-mode currents on the coax or leakage into the coax due to poor cable connections (bad connector crimps, corroded shields, etc.)

So what you are saying is it is OK to post stereotypic, possibly offensive, material as long as you are making fun of your own kind. I guess this means that if the Scratchi post was made by a Japanese then it would be OK and no one should be offended.

|> As I also pointed out to you, it was a response to the 'flaming yer butt'
|> slang, in any case. Which is why I asked about the "Hampshire Hillbillies."
|>

Now who is rationalizing? It is OK to poke fun at "hillbillies", a blatant stereotype portraying southerners, and other from rural mountain areas as ignorant, backwards hicks because you can relate to it.

|> I have tried to carry on an intelligent conversation with you, Garry;
|> but you're going to have to decide whether that conversation takes
|> place publicly or privately.
|>

I posted this before I replied to your private e-mail. Which you initiated by the way, not me! I didn't ask to be harrassed privately. I thought a response here in a public forum was appropriate to your public posting of stereotypic and potentially offensive material. There are other issues we were discussing privately that I don't feel are appropriate for public discussion.

I can't answer for Steve's cabinet, but I can answer at least somewhat for Bill Burden's. Bill WB1BRE is the New England Division Director. Like Steve, Bill also runs a cabinet meeting a week or two before the Board of Directors meet. Bill invites his vice-director, all division appointees, all Section Managers and their appointees, the Presidents of all ARRL-affiliated clubs in the division (the clubs may, at their discretion, send someone other than the club president), and selected others. He tries to make his agenda known to these folks beforehand, so that they may solicit input on the discussion topics. If there are issues that he wants very wide input on, he sends out a division newsletter with a questionnaire (and if not enough people respond to the questionnaire, he sends his cabinet members out to clubs, etc. with questionnaires). As president of our radio club, I've attended two of the NE Division cabinet meetings now, and I can tell you that they are hardly an "amen chorus"! There are some very outspoken people in the leadership of the sections and the division, and believe me, not everyone agrees with everyone else.

Does Bill listen to his cabinet? Yes, but he also lets them know what he's heard from the membership at large, and he incorporates that into his words and actions as well.

Bill uses the cabinet meeting as a sounding board, as a chance to get to know the ARRL and club leadership (SMs, appointees) in his division, and as a chance to educate those leaders about issues involving Amateur Radio, the ARRL, the FCC,

etc. Each of the cabinet members has his own reasons for attending.

Possibly. It's also possible we'd get a more divided organization -- consider how well DXers and Contesters, repeater owners and weak-signal folks, CW fans and haters, etc. get along now (okay, okay, so I've been reading too much r.r.a.policy lately! I keep forgetting the Internet isn't a good cross-section of the amateur world... :-)

I do know that at least some of the directors currently get input on some of these topics (digital considerations, DX, repeater issues, etc.) from the ARRL committees whose purpose it is to oversee the particular area(s) in question. If I remember correctly, reports from these committees are given at each Board meeting; I do know that Bill WB1BRE often (always?) invites the New England representatives of any of these committees to his cabinet meetings. My hope is that other division directors would do the same, though I realize that may only be wishful thinking...

Amen to that! Volunteerism is not a popular thing these days. And I suspect that's why elections aren't held at these levels. It's tough enough finding folks to run for Section Manager... Interesting thought, though.

I think you would find them even more so in person. The ARRL headquarters is *well* worth visiting ifd only for that!

I have been there twice (hopefully again this summer :-), once in 1964, and again in 1980. The most impressive difference was how everything had grown! The sheer size of everything was impressive, yet somehow they still manage to remain very well focused on both amateur radio and the individual amateur.

I will be interested to see the changes since 1980!

Please reread the text above, Gary. You missed something. Among the list of people who are part of the division cabinet are Section Managers (SMs). The SM is an ELECTED position. Elect someone as your SM who will represent your views, just as you would want to elect someone for Director who reflects your views.

I ran for and won the SM job in Western Massachusetts. The previous SM never even went to the cabinet meetings. Oh, and out director also invites the president (*or representative) of affiliated clubs. Again people who are ELECTED, not appointed.

There are committees with these charters, and each director appoints people to those commitees. If you think the digital committee needs your particular talents, CALL your director and volunteer to serve on a committee or two.

>John Welch, N9JZW

While I can't deny that 10watts or less and a marginal antenna will
work on 6m, especially for sporadic E layer propagation, this approach
will severely limit the number of your tropospheric and ground wave contacts.
Additionally, other modes of communication such as ionospheric scatter,
meteor scatter and aurora typically take a significant amount of
ERP to even get a readable return signal.

My recommendation agrees with a previous recommendation posted....
100 watts and 5 element is a recommended minimum to be able
to "enjoy" 6m operation, especially as we move into the "sun spot
minimum". With this setup, you can handle the typical 6m QSB
and maintain a reasonable QSO and have just enough ERP to be
able to enjoy some occasional scatter and/or aurora
communications modes.

What do I run? you might ask --- 6 elem boomer at 50', 800 watts, IC551D.
Results: So far - 50+ countries, WAS and around 300 Grids....
Ok 10 watters, start catching up...... Oh yah, my neighbors' tvs are
just fine... its partially in the design of the amp...

Think of 6m as like being a 10m band that only opens up 10% of the time
10m opens.....Given this fact, wouldn't you like to work a few more
QSOs while the band is even open?

5190. Bravo, Bravo +, etc. pager options and programming ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 01:25:20 UTC
From: mwgordon@nyx10.cs.du.edu
Message-ID: <1993Dec14.012520.27012@mnemosyne.cs.du.edu>
Source record: 273385

Due to a career change, I will be back to using a pager soon. About four years ago, I was on a Bravo, now I see that the paging companies are pushing a variety of numeric pagers, including the Bravo + (or 2?), Bravo Express, the Freespirit (rounded looking moto pager) and those CHEAP NEC models. I'd like to stay with a Motorola, (I hear nothing but problems about the NEC) but which one?

I like the time-stamp feature of the Bravo + and Express, and vibration mode is a must, as I'm often in noisy environments. What other features do these newer units have, and how useful are they? What options can the user set, and what ones can be set by the dealer? Since I'm sure most dealers don't want to go through the trouble of programming options, I'm sure they won't tell me about all of them.

Also, has anyone figured out how to program a Bravo through the 3 contacts near the battery? (Without having to pay the paging company big $ to do it?) A buddy of mine want's to change the his beep sound (no, not his CAP code), and can't justify the $25 his paging company wants just to plug it in and hit a few keys on their computer. He has a PC, and can make a cable / interface if it isn't too overly complicated. Gee, could it just bee a 3 wire serial connection?

On a more serious note, last time I was on a pager, my call-in number used to be occupied by a "dealer". (And I don't mean a used car dealer.) As I worked third shift and often slept during the day, (and will be again, oh joy of joys) I didn't enjoy the calls at noon from his old customers. Does anyone have any little hints on how to avoid this? Please don't suggest having my boss call me at home during my sleeping hours, because that would mean I'd have to plug my phone in and get woke up by tele-marketers. (At least they don't call pagers!)

By the way, the rep from the paging company could only suggest turning off the pager while I slept. Kind of defeats the purpose of having a pager when you're on call around the clock, and missing a call means losing a shift.

Thanks in advance for any help,

Mike Gordon N9LOI mwgordon@nyx.cs.du.edu

5191. 10-Codes used by law enforcement

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 01:29:07 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9311137558.AA755832547@smtpgty.anatcp.rockwell.com>
Source record: 273384

Brian Mork [bmork@opus-ovh.spk.wa.us] posted a list of 10 codes used by law enforcement (list deleted). While I'm not sure why it was posted here, I am curious -- this list is not anything like any law enforcement 10 code I have used or seen. It certainly doesn't match the Orange County (California) Radio Codebook, which tries to follow national standards and P.O.S.T. standards.

I am, on the other hand, planning on being in Washington next week. Is this version of the code actually what is used by law enforcement there? I could get quite confused listening in on the local cops if it is, but they would be more confused listening to cops down here, 10-34 in my book is resume normal operation and is used frequently to reopen a frequency that has been restricted to particular traffic ("all units, 10-34 on orange south", by the list posted, the Washington cops would be looking for a riot (that was up in L.A.)

(As I reread my post, I see it could be interpreted as flameage, it is not meant to be -- I am curious)

5192. [Frequencies in use: a FAQ?]

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 01:52:37 UTC
From: gereiswi@nmsu.edu
Message-ID: <2ej695INNhbt@dns1.NMSU.Edu>
Source record: 273401

I hope this isn't a stupid FAQ, but I would really like to get
some information: How can I get lists of 2m/70cm frequencies used in
certain geographical areas, along with repeater offsets and access tones?
It would also be nice to know police, etc., frequencies.
I'd REALLY appreciate any suggestions. The only references I
found (at Radical Shack) didn't have offsets or anything. I am
particularly interested in the New Mexico/Colorado area.
Thanks in advance for the help!

5193. Arizona repeater info needed

From: paulc@fc.hp.com
Message-ID: <CI095H.HKt@fc.hp.com>
Source record: 273388

Hello all,

I will be traveling from Colorado to Arizona by way of Utah (Moab, Monument Valley, Canyon De Chelly, I-40, Flagstaff, Phoenix) in a few weeks. I'd like to be able to use 2M (or 440) to contact Phoenix along the way. I've heard of the Northlink system, and ZIA. Do either of these get into Phoenix? It appears from the repeater directory that Zia does, but I don't think it covers northern Arizona. On the other hand, Northlink might not get into Phoenix.

In any case, any info you might be able to share would be much appreciated.

Thanks!

-Paul Christofanelli KG0CZ Fort Collins, Colorado

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

ANARTS broadcast schedules for the holiday season

The broadcast will go into recess after 19th December 1993
and resume on 9th January 1994. While this is not a long break
for the hard-working relay officers, it is hoped they will
come back fresh to many contacts on the bands. It gives time
for antenna overhauls and the like, as well as making the
acquaintance of their various families again, hi hi.

We hope to bring you as much, if not more, news and
information DXwise in the coming year.

Here are two item from WIANEWS-ON-DISK December 1993

Lunar Repeater

The Project OSCAR Group of Northern California has proposed
installing the first amateur repeater on the moon. Project
OSCAR is the group that built and orbited the world's first
amateur radio satellite.

During recent meetings, says the US Westlink Report (No 655),
the organisation decided to revive "Project Moonray" to take
amateur radio into the 21st century.

Moonray is short for Moon Relay - a concept first proposed by W6OLO back in 1965. The idea was to build a repeater that would fit under the seat of the Lunar Rover. But, the project was shelved after the US Congress cut funding for manned Moon missions beyond Apollo 17.

No specific schedule for establishing Moonray has been offered by the Group, although organisers hope to get the project off the ground by the turn of the century - only seven years and one month away (to 2001).

Item 2
Coast Guard ends Morse Code

The United States Coast Guard has closed down its Morse Code operations on 500 kHz. The final CW transmission ended an era at 0000 UT on 31 July 1993, according to the W5YI Report.

Coast Guard operators first began listening for distress signals on 500 kHz at the turn of the century. The Service set up its permanent station almost 70 years ago, to monitor 500 kHz on a continuous basis.

Officials said the advent of satellite communications and digital technology had made Morse obsolete on the high seas. CONTINUED NEXT PAGE.

A misty-eyed Coast Guard radio man tapped out the final 73, saying "we now look forward to serving you on the nest generation of communications equipment and systems via the Global Marine Distress and Safety System (GMDSS)."

Thanks to WIA (Federal) for those items

As promised last week, here are the rules for the ARRL RTTY Roundup Contest to be held 8-9 January 1994. Be in it.
==========
Contest period: Starts at 1800 UTC Saturday and ends at 2400 UTC Sunday. Operate no more than 24 hours of this 30 hour period. Two rest periods (for a combined total of 6 hours) must be taken in two single blocks of time, clearly marked in the log.

Bands: 80, 40, 20, 15, and 10 m (five bands).

Modes: Baudot (RTTY), ASCII, AMTOR, and Packet (attended operation only).

Operator classes: a) Single op., unassisted, all bands:
1) less than 150 watts output
2) more than 150 watts output

b) Multi-op, single transmitter. Once
station has begun operation on a given band, it must remain on

that band for at least 10 minutes.

Exchange: U.S. stations : RST and State
Canadian stations: RST and province
All others: RST and serial number, starting with
001. Both stations must receive and acknowledge complete
exchange for QSO to count. Neither cross-band nor cross-mode
QSOs are permitted. Packet QSOs through digipeaters or
gateways are not permitted.

QSO points: Count one point for each completed QSO (anyone
can work anyone). A station may be worked once per band for
QSO credit, but not for additional multipliers.

More next week.

IPS weekly report

26 November - 2 December 1993
Issue no.: 49

Date of issue: 3 December 1993

Date 26 27 28 29 30 01 02
10cm 93 90 93 94 104 109 104
A 12 03 04 10 02 20 (30 estimated)
T 60 83 90 67 41 76 18

Summary of activity
Solar activity was very low 28th November and 2nd December,
and low for the remainder of the period.

The geomagnetic field at Learmonth (WA) was quiet, or quiet to
unsettled until 1st December at 1200 UT when the field was at
active to minor storm levels for the rest of the day,
returning to unsettled to active on 2nd.

Ionospheric F2 critical frequencies at Sydney were mostly near
predicted monthly values, with brief enhanced periods of up to
30 per cent on 27th-28th November and 1st December, and brief
depressed periods of up to 30 per cent on 30th and 2nd.
Blanketing sporadic E conditions were observed 1900-2000 UT on
2nd December.

Forecast for the next week (3 - 9 December)

Solar : Low.

Geomagnetic: Unsettled to active 3-4 December, quiet to
unsettled thereafter.

Ionospheric: 20 per cent depresed 3 December, near normal
otherwise.

VK2SG RTTY DX NOTES 26 NOV.'93

VK2SG RTTY DX NOTES WEEKENDING NOV. 26, 1993 (BID RTDX1126)

The bands have been poor again this week, and forecast are
not good. I would like to repeat some comments allready made
before. It concerns the removal of the Bulletin Identification
Number of the notes. During the week I received from Spain
notes which I edited a month ago. The bid number has been
removed and replaced with a local bid number, this has caused
confusion and some BBS suffer the multiple delivery of the dx
notes with different BID. Please only pass on the received
bid number,if you cannot do this then allow someone else who
can pass on the correct bid to do so.

Our information this week came from: ZS5S, W2JGR, WB2CJL,
AA5AU I5ICY, I5IGQ, IK1HSR, SP5AA, DJ3IW and the Central Eu
Dx-Cluster node DB0SPC, and NJ0M node of the Twin Cities Dx
Pck Cluster. Tnx for the help on putting this notes together.

Society.

ANARTS broadcast schedules for the holiday season
==
The broadcast will go into recess after 19th December 1993
and resume on 9th January 1994. While this is not a long break
for the hard-working relay officers, it is hoped they will
come back fresh to many contacts on the bands. It gives time
for antenna overhauls and the like, as well as making the
acquaintance of their various families again, hi hi.

We hope to bring you as much, if not more, news and information DXwise in the coming year.

Something to look forward to :

Frank VK2FJL has sent us a large item on Guidelines for the preparation of programs for transmission by Amateur Radio teletype. Now, so close to the end of the year and to a three week break, is not good time to run this item as it will go over more broadcasts than that. In order to keep the material fresh and continuous, we will commence with the first broadcast for 1994, which will be the 9th of January (see above).

We thank Frank for his contribution and trust he doesn't mind not seeing it in print until then.

This should be very interesting so don't forget to be watching in the new year.

ARRL RTTY Roundup part 2

Multipliers: Count only once (not once per band) each US state (except KH6 and KL7), each VE province (plus VE8 and VY1) and each DXCC country. KH6 and KL7 count only as separate DXCC countries. The US and Canada do not count as DXCC countries.

Canadian multipliers :
PrefixProvincePrefixProvince
VO1/VO2NFLD/LABVE4MB
VE1NBVE5SK
VE1NSVE6AB
VE1/VY2PEIVE7BC
VE2PQVVE8NWT
VE3ONVY1YUKON

Final score: Total number of QSOs times total multipliers.

Awards: Certificates will be awarded to: Top scoring low power and high power single operators and multi-op scorers in each ARRL/Canadian Section; Top low power and high power single operatrs and multi-op scorers in each DXCC country (other than W/VE); each Novice and Technician entrant; each entrant making at least 50 QSOs.

Logs and summary : Logs should contain the suggested standard format : BAND, MODE, DATE/TIME, ON/OFF TIMES, CALLSIGN, EXCHANGE SENT/RECEIVED, MULTIPLIERS (marked the first time worked). Entries with more than 200 QSOs must submit duplicate check sheets (an alpahbetical listing of stations worked). A Summary Sheet must show : claimed score tally, class of operation, your call, name and address. Multi-op stations please include names and callsigns of all operators.

Deadline : Entries must be postmarked no later than 30 days
after the end of the contest (February 8, 1994). Mail entry to

: ARRL RTTY ROUNDUP
225 Main St.
Newington, CT 06111
USA

7.080-7.100 28.070-28.150

IPS weekly report

3 December - 9 December 1993

Issue no.: 50

Date of issue: 10 December 1993

Date 03 04 05 06 07 08 09
10cm 106 105 101 103 107 105 98
A 26 05 09 05 13 32 (02 estimated)
T 30 72 59 56 66 79 46

Summary of activity

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) on 3rd December was mostly unsettled with brief minor storm periods, quiet to unsettled 4th-5th, quiet on 6th and early on 7th, afterwards reaching active to unsettled levels. The field was at minor storm levels on 8th, returning to quiet on 9th December.

Ionospheric F2 critical frequencies at Sydney on 3rd were depressed by up to 30 per cent 0000-0800 UT and 1600-1800 UT, and enhanced by up to 20 per cent 1100-1400 UT and from 2000 UT on the same day. F2 frequencies were up to 30 per cent enhanced early on 4th, returning to near normal until 7th when there was some enhancvement of up to 20 per cent 1700-2000 UT, with up to 15 per cent enhancement the following day, returning to near normal for 9th. There was some sporadic E obscuring the F layer at 1000 and 2100 UT on 7th December.

Comment: The geomagnetic storm on the 8th December was unexpected and its cause is unknown.

Forecast for the next week (10 - 16 December)

Solar : Low.

Geomagnetic: Quiet to unsettled 10-14 December, unsettled to active 15-16 December.

Ionospheric: Near normal 10-15 December, 20 per cent depressed 16 December.

Courtesy of IPS Radio and Space Services

The RTTY DXnotes have not been available for this week -- perhaps a hardware failure? so, rather than leave you DXless, we are including the ARRL DX notes, so your horizons have expanded this week to SSB and CW, as well as RTTY which does get a mention. Hope to have the DXnotes back next week as usual.

DX BULLETIN 67 ARLD067
FROM ARRL HEADQUARTERS
NEWINGTON CT DECEMBER 9, 1993
TO ALL RADIO AMATEURS

THANKS TO IRMA, VR6ID PAUL, N6IBP LOU, W9GSB JOSE, CX1DY TEDD, KB8NW AND THE OHIO/PENN DX PACKETCLUSTER NETWORK FOR THE ITEMS IN THIS WEEK'S BULLETIN.

REVILLA GIGEDO ISLANDS. XE1CI, XE1ABA, AND POSSIBLY OTHER XE DXERS WILL OPERATE AS XF4CI FOR TWO WEEKS BEGINNING AROUND DECEMBER 20. NELLIS WILL BE THE FIRST YL DXER TO OPERATE FROM XF4, AND WILL OPERATE SSB ONLY. LOOK FOR HER AROUND 3795, 7065/7174, 14195, 21295, AND 28395/495/595 KHZ. CW CHORES WILL BE HANDLED BY XE1ABA. THE REST OF THE TEAM WILL BE ON SATELLITE, 6 METERS NEAR 50.110 MHZ, 2 METERS AND 70 CM. QSL ALL CONTACTS VIA XE1CI.

MADAGASCAR. 5T5KH HAS RELOCATED TO MADAGASCAR AND IS NOW OPERATING AS 5R8KH. QSL VIA WB8LFO.

WESTERN SAHARA. S0RASD IS ON 212 0 AND 21256 KHZ BETWEEN 1730 AND 1830Z. S01MZ WAS HEARD OPERATING BY CALL AREAS ON 14202 KHZ AROUND 1930Z. QSL BOTH VIA EA2JG.

PALAU ISLANDS. TED, NH6YK, WILL BE OPERATING KC6YK SPORADIC-ALLY BETWEEN DECEMBER 20 AND JANUARY 2. HE WILL BE ON RS-10, AO-13, 6 AND 10 METERS. SOME LOW BAND OPERATION MAY TAKE PLACE IF EQUIPMENT CAN BE SECURED. TED STATES THAT IF YOU MISS HIM THIS TRIP, HE WILL BE BACK IN PALAU OVER THE SUMMER.

CZECH REPUBLIC. OL1A HAD BEEN RUMORED TO BE A PIRATE STATION, BUT LOU, W9GSB, REPORTS THAT HE HAS RECEIVED A CARD FOR THE OPERATION. OL1A IS A SPECIAL CONTEST STATION OPERATED BY OK1DFP, OK1DIX, OK1DWX, OK1FCW, OK1FIA, AND OK2BFN. QSL OL1A AND OL1HQ VIA OK1DWX.

PITCAIRN ISLAND. FOR AMATEURS WISHING TO QSL THE RECENT SPECIAL EVENT OPERATION WHERE PITCAIRN STATIONS WERE SIGNING

VR6SLY/INDIVIDUAL STATION SUFFIXE , THERE IS A SPECIAL GROUP TO HANDLE CARDS. ADDRESS MAIL TO THE CALL SIGN OF THE STATION CONTACTED, VIA ''PRIVATE BAG'', PITCAIRN ISLAND, SOUTH PACIFIC OCEAN, VIA NEW ZEALAND.

THERE ARE CURRENTLY 59 RESIDENTS ON THE ISLAND, 12 OF WHOM ARE LICENSED AMATEURS. THE PITCAIRN AMATEUR CLUB IS BEING FORMED AND SHOULD BE ON THE AIR AS VR6PAC BEFORE TOO LONG.

LOBOS ISLAND. ON DECEMBER 10, 11 AND 12, A 12 OPERATOR TEAM FROM THE URUGUAY DX GROUP WILL PUT IOTA AS-39 ON THE AIR. THE CALL SIGN WILL BE CW0L. LISTEN FOR THEIR SSB AND CW ON BOTH HF AND VHF. QSL VIA CX2CS.

GEMINIDS. VHFERS NOTE THAT THE GEMINIDS METEOR SHOWER WILL PEAK ON DECEMBER 13. HFERS NOTE THAT YOUR PACKETCLUSTER SCREEN WILL BE SPORTING A LOT OF VHF SPOTS OVER THE NEXT FEW DAYS.

THIS WEEKEND ON THE RADIO. THE ARRL 10 METER CONTEST RUNS FROM 0000Z DECEMBER 11 THROUGH 2400Z DECEMBER 12. NOVICES SIGN THEIR CALLS /N AND TECHNICIANS /T. STATESIDE AND CANADIAN STATIONS SEND SIGNAL REPORT AND STATE OR PROVINCE. DX STATIONS SEND SIGNAL REPORT AND SERIAL NUMBER STARTING WITH 001. FOR FURTHER DETAILS SEE PAGE 126 OF NOVEMBER QST.

THE TROY ARA 2ND ANNUAL RTTY SPRINT, SPONSORED BY THE TROY NY ARA, IS FROM 2100Z DECEMBER 11 UNTIL 0100Z DECEMBER 12. EXCHANGE RST AND STATE/PROVINCE/DXCC COUNTRY. THIS EVENT IS A GOOD WARM-UP FOR THE ARRL RTTY ROUNDUP COMING UP IN JANUARY. FOR MORE INFORMATION SEE PAGE 129 OF DECEMBER QST.

NOTE: The Effective Sunspot Number for 12 DEC 93 was 48.0.
The Full Kp Indices for 12 DEC 93 are: 2- 1o 2- 4- 2+ 2o 1- 1-

SYNOPSIS OF ACTIVITY

Solar activity was at low levels. There are no
significant regions on the disk.

Solar activity forecast: solar activity is expected to be
at very low levels, with a minimum chance of a C-flare.

STD: A long-decay class B9.6 x-ray event was optically
correlated with an eruptive prominence on the northwest limb
near N14 between 15:43 and 15:51 UTC. Recent Yohkoh images
suggest a new region may be approaching the east limb. A
full-disk x-ray image from Yohkoh has been appended to this
report.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet to active levels. Active conditions
are expected around the 15th and 16th of December. STD: The
responsible coronal hole is now crossing the central meridian.

Event probabilities 14 dec-16 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 dec-16 dec

A. Middle Latitudes
Active 15/20/20
Minor Storm 05/15/20
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/20/25
Minor Storm 05/05/10
Major-Severe Storm 01/01/05

HF propagation conditions continue to be near-normal over
low and middle latitude paths and slightly below-normal for
high and polar latitude paths. The weak state of the high and
polar latitude ionosphere will continue to produce minor signal
degradation for signals crossing these regions, particularly
through the local night and sunrise sectors. Conditions are
expected to worsen on 15 and more generally on 16 December due
to enhanced geomagnetic and auroral activity. Middle and low
latitude paths should continue to see near-normal propagation
except on 16 December where night sector paths may see minor
signal degradation due to the anticipated enhancement in
geomagnetic activity.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

In article <yTqgec5w165w@ham.almanac.bc.ca> emd@ham.almanac.bc.ca writes:

> What was accepted then by the average person and what is acceptable now
> has obviously changed, as have many other things in our society. "Amos
> 'n' Andy" wouldn't get the same reaction today that it did in the
> forties, either.

(To those of you betting that I would get involved in this, collect your money.)

Amos 'n Andy were played by white folks. They was funny back then, and they is still funny now. Rochester (Jack Benny's man-servant) was black, not a white guy playing a black man. The humor in both shows was based on situations. (Geeze, situation comedies, what a concept!) Jack Benny because he was cheap, and A 'n A because they were poor and a tad dim.

If you wish to presume that I think all blacks are like those portrayed in Amos 'n Andy, simply because I find it humorous, you've lost your mind. And I refuse to appologize for finding it humorous.

You should rent the tape "Raw" by Eddie Murphy and then come back and tell me about racist stereotypes.

On prejudice, "I love women, but I wouldn't want my sister to marry one."

5200. Re: Comments on logging programs solicited!

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 12:10:45 UTC
From: connie2@freenet2.scri.fsu.edu
Message-ID: <2ekag5$nhs@mailer.fsu.edu>
Source record: 273394

I received and tried five different general logging programs this last September. These were mostly demo disks (but still enough to get a good feel for the program's merits and failings.) None were hot contest-style, ala CT. -- To shorten a long story, I found WB2OPA's LogMaster Plus/Plus to come out on top. Its main advantage to me was its ability to produce customized reports. An example: to pull and print from the overall data base a report of all contacts confirmed (QSL), by country, by mode, by alphabetized call sign. This gave me a master report for my QSL file. I then repeated the request for 10M, 40M, 80M and 160M as separate, smaller reports. The LogMaster program easily produced these. Now I feel I've some control over 1000's of bits of data and cards for the first time in many years of DXing. -- Overall LogMaster has proven a valuable tool and I continue to appreciate what it can do as I use it. (By the way, for my "average" speed in contest, this program worked fine for me. It might be a tad slow if you're making several thousand Q's over a weekend, but for my several hundred, its "rapid entry" mode and autiomatic date/time recording proved great. -- I'd suggest trying several demo programs, just as I did. Include LogMaster in your trials. Its worthy of a test.

>>appointees, SMs, section-level appointees, and selected others.

>This is a perfect example of the old boy network in action.

Gary, you are seeing the devil behind every bush. You apparently don't know much about the structure of the typical "cabinet." First, the Section Managers are not the Director's "appointees." They are elected by the members in each section within the Division. The ARRL Affiliated club Presidents are also invited to attend the cabinet meetings, at least in the New England Division. These are elected on a local level, by each club. The rest of the cabinet often includes many of the Director's appointees, but the cabinet is not the "old boy" network that you are imagining, not by a long shot. I have seen more than one of these "OBs" roast the Director for one thing or another.

>The problem with the League structure as I see it is that it's a
>one party state controlled mainly by the apparatchiki. It needs a
>strong loyal opposition to keep it vigorous and honest.

Unfortunately, some of those who serve as "loyal" opposition do so in ignorance of the facts. This significantly undermines their effectiveness with those who have looked at things with their eyes open.

>(Lord knows though that it's hard enough to find *any* volunteers
>to take some of these jobs.)

And unfounded accusations of "good ol' boyishness" directed at those who *are* willing will not fix that problem. If anything, it will make it worse.

Gary, as much as I have respected your technical opinions and your willingness to help others, I must point out that you are way off base on this one.

>the signals are *so* strong...

The Robbins AFB PAVE PAWS system has been inactive during this period, so that's not your problem. In fact they haven't been at full power for a long time. It seems the ERP on the flight line is hazardous to B52 avionics and weapons triggers. If the signal is strong, then RDF should quickly give you an idea of the direction of the source. If you can track it for several hours, you can tell if it's a fixed or mobile source. It's possible it's DEA. They have a nasty balloon borne radar that they use to track drug shipments. Redstone Arsenal has been using some airborne missile telemetry in this band lately, but it doesn't sound like radar.

All you need is a modest beam antenna and a handheld receiver with a signal strength indicator. Either climb up in the feed car, or on one of the surrounding mountains, and take some readings. Since your observations are being ruined anyway, use your talents to track the monster.

I'd like to explore Weather FAX at a reasonable cost. I noticed several commercial packages around $100 or so (AEA, SSC, etc) and one shareware with a homebrew interface.

Does anyone have any recommendations as to the best way to go. I would like to keep the cost less than $150, as that's all my dog has saved up for my Christmas present :-)

Thanks

Bill

It sounds like you are dealing with audio rectification. CW has
no audio associated with it, although I would imagine that you would
hear various thumps in the speaker as CW is keyed.

The high-pass filter you built is usually not necessary in cable-tv
installations. I usually recommend a common-mode choke as the best
all-round cure. Buy an FT-240-43 ferrite core. Install it by wrapping
about 10 turns onto the core, just before the cable hooks up to
the first electronic device in the system (set-top converter, VCR
or cable-ready TV). You can also purchase a common-mode choke.
The FT-240-43 core is available from Ocean State Electronics
401-596-3080. A common-mode choke is available from Starplex,
314-423-5756 (part-time business).

You might also try a common-mode choke and/or AC line filter (Radio
Shack catalog #14-1111) on the ac-line cord (TV, VCR or set-top
converter).

The ARRL Technical Information Service has several EMI/RFI information
packages available. Paper copies are available from the ARRL Technical
Department Secretary, 225 Main St., Newington, CT 06111. Send
a 9"X12" SASE with 3 units of US postage for each package required,
or send $2.00 each and we will send them postpaid. If you want one for
free, send a report of the particulars of your EMI problem to
ehare@arrl.org, AND a specific request for one or more of
the applicable packages.

EMI/RFI Package - obtain this one plus any of the others
EMI/RFI - bibliography
EMI/RFI - CATVI - Reprint from Communications Technology
EMI/RFI - Computer
EMI/RFI - Electrical
EMI/RFI - Telephone

The paper files have some information that cannot be made electronic, such as the ARRL EMI/RFI Pamphlet for the non-technical neighbor. Most of these are also available on our ARRL Electronic Mail Server, info@arrl.org. Send it a request, with HELP in the text of the message.

This information has been prepared as a membership service by the ARRL Technical Information Service.

The Sony 2010 is widely considered to be one of, if not the very best sw
radio for under $500. For a more thorough review of the receiver, you might
want to consult _Passport to World Band Radio 1994_ (or any other of the past
several years.)

|> wjc@ll.mit.edu

Bill,

You are right. Constructive interference would cause the fields to double
thus quadrupling the power. Thanks for pointing this out. I seem to
do this often when dealing with power.

As others have pointed out, the actual field pattern would probably have
a major lobe pointed towards the horizion, thus reducing the probability
of 100% constructive interference at the ground 100ft from the antenna.
So I still think it would be unlikely to have power densities greater than
50uW/cm^2 in the dorm room.

After all of this analysis it would be great to have an actual field strength
measurement from the dorm room :-).

73,
Eric

Yes I know the SM is elected, but the others are all "selected". Now
don't get me wrong, as the system is currently constituted this is about
as good as it gets. I'd be nice if more directors followed this example.

>
>There are committees with these charters, and each director appoints
>people to those commitees. If you think the digital committee needs your
>particular talents, CALL your director and volunteer to serve on a
>committee or two.

Appointed by directors to committees that's the key phrase. No good.
Most of the bad things said about committees are true, and many committee

reports are buried by those who created the committee in the first place, especially when the report differs from the preconcieved notions of those overseeing the committee. We have a pretty good guy as our director, but he doesn't know jack about some of the things our user communities are doing, or the issues they face. We need people who *know* who are also empowered to *act*. That means they have to be more than appointees. They have to have power of their own gained at the ballot box in order to be effective.

What's needed are people on the same level of authority with the territorial directors who are *elected* by their interest communities to be their representatives on the board. This is a radical change, much like the two house method of electing our Congress in that there are two sets of people elected on different criteria. Organizing an amateur radio body strictly along geographic lines doesn't make a lot of sense today. We probably all know practioners of our special interests better than we know the general run of hams in our local area. For example, I probably know more satellite users in Colorado than I know HF DXers in Georgia. The interest communities know who's hot and who's not. But the guy on the next street over, with the tribander, and I may have never met because our interests are so different. I have no criteria for judging his competence to represent me, nor he I. Mere commonality of location doesn't imply commonality of interest or knowledge.

Gary

^^^^^^^^^^^^

Wow. Cool word. Extra credit on that one, Gary :-)

Anyway, it seems to me that this whole argument (The League is bad vs. it's your League) is being looked at too ideally, and Gary is spot-on when he points out that politics do come into play.

As I pointed out to someone else, the trouble with 'majority rules' is that the 'majority' doesn't always take into acount the interest of the 'minority.' Worse yet, the 'majority' usually is not a 'plurality,' but in fact is the group with the 'majority' of the power.

One of the reasons you have representative government is to give those who govern the leeway to exercise discretion and to occasionally look out for the minority that didn't elect them. Really good government is one which does what is fair, and doesn't always implement the 'majority' agenda.

The strength of representative government is that there is stability, and change happens in a slow, controlled way. The weakness of representative government is that there is stability, and change is often hard to implement as quickly as we'd like it... ...sometimes we give up first.

I don't know if there's a proper group for discussing pagers, but there certainly should be some expertise here. I'm about to be put on the "leash" too, and would appreciate some discussion of the different pagers and types of service available out there.

Gary

Tell your paging company that you want a new dial-in number. Then, while
they are programming the new number in your pager, ask them to change th
alert beep sequence at the same time. It should be a N/C deal that way!!
BTW, no it isn't a simple thing to build the interface, and you need
some very sophisticated software to access the internal micro-P. This
software is of course copyrighted by Motorola and sold only to those who
have a good reason to get inside the pager to adjust the many features
and options. Theft of paging service is a federal crime! WA8NVW

Due to a career change, I will be back to using a pager soon. About
four years ago, I was on a Bravo, now I see that the paging companies are
pushing a variety of numeric pagers, including the Bravo + (or 2?), Bravo
Express, the Freespirit (rounded looking moto pager) and those CHEAP NEC
models. I'd like to stay with a Motorola, (I hear nothing but problems
about the NEC) but which one?

I like the time-stamp feature of the Bravo + and Express, and vibration
mode is a must, as I'm often in noisy environments. What other features do
these newer units have, and how useful are they? What options can the user
set, and what ones can be set by the dealer? Since I'm sure most dealers
don't want to go through the trouble of programming options, I'm sure they
won't tell me about all of them.

Also, has anyone figured out how to program a Bravo through the 3
contacts near the battery? (Without having to pay the paging company big
$ to do it?) A buddy of mine want's to change the his beep sound (no, not
his CAP code), and can't justify the $25 his paging company wants just to
plug it in and hit a few keys on their computer. He has a PC, and can
make a cable / interface if it isn't too overly complicated. Gee, could
it just bee a 3 wire serial connection?

On a more serious note, last time I was on a pager, my call-in number
used to be occupied by a "dealer". (And I don't mean a used car dealer.)
As I worked third shift and often slept during the day, (and will be again,
oh joy of joys) I didn't enjoy the calls at noon from his old customers.
Does anyone have any little hints on how to avoid this? Please don't
suggest having my boss call me at home during my sleeping hours, because

that would mean I'd have to plug my phone in and get woke up by tele-marketers. (At least they don't call pagers!)

By the way, the rep from the paging company could only suggest turning off the pager while I slept. Kind of defeats the purpose of having a pager when you're on call around the clock, and missing a call means losing a shift.

Thanks in advance for any help,

Mike Gordon N9LOI mwgordon@nyx.cs.du.edu

5215. Re: Scratchi, January, 1960

Newsgroup: rec.radio.amateur.misc

From: garhow@hpubmaa.esr.HP.COM
Message-ID: <2ekm43$t5a@hpscit.sc.hp.com>
Source record: 273398

In article <755848184snx@skyld.tele.com>, jangus@skyld.tele.com (Jeffrey D. Angus) writes:
[snip]
|>
|> Amos 'n Andy were played by white folks. They was funny back then, and
|> they is still funny now. Rochester (Jack Benny's man-servant) was black,
|> not a white guy playing a black man. The humor in both shows was based
|> on situations. (Geeze, situation comedies, what a concept!) Jack Benny
|> because he was cheap, and A 'n A because they were poor and a tad dim.
|>
|> If you wish to presume that I think all blacks are like those portrayed in
|> Amos 'n Andy, simply because I find it humorous, you've lost your mind.
|> And I refuse to appologize for finding it humorous.
|>

The actors on the Amos 'n Andy radio show were white but the actors in the TV show were black. I also thought about this program in the context of this thread. I used to watch it when I was a child and I loved it. Not because it stereotyped blacks but because it was a very funny program. It could never be shown on TV today.

I was thinking about the reasons why. Another popular TV program from the same period was The Honeymooners that was just as bad at stereotyping blue collar workers as Amos 'n Andy was at stereotyping blacks. Stupid Norton, the sewer worker, and Ralph the bus driver with aspirations for greatness he would obviously never achieve and about as male chauvinist as you can get. Yet The Honeymooners is a considered a classic and has been in continuous reruns for years while Amos 'n Andy is banished from the airwaves.

I think the primary reason is because at the time roles such as Amos 'n Andy and Rochester on Jack Benny were the only portrayal of blacks in the media while whites were represented from many different perspectives. Similarly, Japanese were also only represented in a stereotypic fashion personified by Scratchi and the Chinese as Charlie Chan. I don't think these stereotypes would have had quite the impact and been quite so offensive had they been offset with other perspectives. There was no I'll Fly Away to complement Amos 'n Andy. Many of the contemporary black situation comedies on TV today are just as stereotypic in my mind as Amos 'n Andy and they aren't even funny.

I can understand how someone of Asian descent could be offended by the Scratchi article and I agree it would have been a good idea if the poster had preceded it with a disclaimer explaining the context and his intentions for posting it. I apologize for my ignorance of the origins of the article.

At the same time, I still have a hard time accepting any portrayal of ethnic or regional speech as patently offensive as the hypersensitive PC

community would have us believe. I don't think it is practical or reasonable to avoid any statement or action that MIGHT conceivably be PERCEIVED as offensive by anyone. This is counterproductive and puts the emphasis on avoidance of issues rather than open discussion.

The fact that someone posted the Scratchi article has at least led to a dialog on the issue where several points of view have been presented. It has also made me at least, and I suspect a few others, aware of something that I didn't know before. I have carried on personal e-mail correspondence with someone who was offended by the post and after getting past the initial emotional response started to carry on a meaningful discussion and understand his feelings a little better. If the original poster had followed the PC line and suppressed the article for fear of offending someone then none of this would have happened. I don't understand how censorship, self imposed or not, contributes to interpersonal understanding.

In addition, it is almost impossible to avoid offending some special interest group today. However, I must admit I have seen the light and in the future I will do nothing that might offend anyone else. I will not smoke lest I offend the non-smokers. I will let the smokers blow their smoke in my face lest I offend them. I will not let my wife wear here fur coat lest she offend the animal rights activists. I will not let any female in my family seek counseling at a clinic that performs abortions lest they offend the right-to-lifers. I will not eat meat lest I offend the vegetarians. I will not drink Miller Lite lest I offend the Teamsters. I will not own a home built of lumber lest I offend the spotted owl fans. I will not own land lest I offend the rightful native American owners from whom the land was originally stolen. I will not use Morse Code lest I offend the No-Coders. I will not use Phone lest I offend the CW fanatics. I will not use 2M repeaters lest I offend those who think they own the frequency. I will never again admire a beautiful woman or open the door for a woman lets I offend the feminists. I will never again smile at any joke that portrays a human person of any race or sex. Since none of us are perfect any humor that reminds us of that imperfection is bound to offend someone. Living the perfect PC lifestyle sounds like it is going to be pretty boring but that's the price to pay.

5216. Mac Plus Upgrade + PK-900 ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 15:40:38 UTC
From: RHAREL@FAB8.INTel.COM
Message-ID: <9312141540.utk26212@FAB8.intel.com>
Source record: 273400

I can't find the Mailgroup for Macintosh users but perhaps someone here knows how I might upgrade my Mac Plus from it's present 1 Mb RAM to 2.5 or 4 Mb.
I think it's more than just swapping SIMMS - if I recall, it involved clipping some resistor ?
Anyone else out there using MacRatt with the PK-900 ? Any ideas on how to open an additional receive window and have all traffic of P1 go to one window and P2 go to the other ?

73,
Rich

From: gereiswi@nmsu.edu
Message-ID: <2ekmulINN28r@dns1.NMSU.Edu>
Source record: 273404

I am hoping that someone may be able to help me out with what may
be a stupid FAQ, but which I can't find the answer to.
How does one find frequencies in use in certain geographical areas on
2m/70cm and police, etc., bands? I also need offsets for the repeaters,
access tones and so forth. The only resource I know of (from Radical
Shack) is, shall we say, less than comprehensive.
I am particularly interested in the Colorado/New Mexico area.
Thanks in advance for the help.

5218. RACES Bulletin #304

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 16:08:20 UTC

LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.304 DATE: December 13, 1993
SUBJECT: OPS - Fire Departments use the RACES

Contributed by: Fire Captain Willis H. Lamm, N6VZT
QUESTION: How do use Amateur Radio operators in your RACES
unit?
REPLY: Amateur Radio volunteers are actively involved and are
on-call as an emergency response team. They are dispatched by the
fire communications center and have a Multi Agency Command Support
vehicle equipped with fire, police and Amateur radios as well as
several telephone systems, FAX, on-board computer with hazmat
programs, copier and fieldcommand supplies.
Past responses for the Amateurs include:
Greater alarm fires (Command support functions)
Police SWAT responses (Command support functions)
Search and Rescue operations (Multi agency-communications
coordination, command support)
Loma Prieta Earthquake; Oakland (Provided communications for
Red Cross)
Oakland Firestorm (One team operated a staging area in Orinda
where resources from all over Northern California gathered pending
assignment to the firestorm and two other significant area fires. A
second team provided command support for the tactical branch operating
on the ridge above the firestorm.)
The District operates a packet radio bulletin board and has
packet capabilities in all fire stations. 2M and 70CM voice
capabilities are provided at the headquarters station and is available
at the outlying stations. The Emergency Operations Center (at City
Hall) also has HF capability.
Amateurs are used in many roles which permit uniformed fire
personnel to remain available for more dangerous duties.
All amateurs are welcome to participate in this forum. For more
information contact Willis, N6VZT @ AA6QR.#NOCAL.CA.USA.NA .

I am posting this for a friend.
He will be taking a trip this summer in the Brooks Range, North Face
region of Alaska. Probably a mixture of backpacking and kyaking.
He asked me about what kind of radios would be useful out there. They
would be used primarily for emergency communication and linking with
their pilots. Could anyone recommend radios, modes and frequencies
for this? Would marine UHF radios be useful, ham frequencies?
If you have any experience or knowledge or could point me in the direction
of such, please email me at lent@mcs.anl.gov

Even though this has nothing to do directly with amateur radio, I think this is probably the best group to ask. This year I decided that it would be fun to make a "Merry Christmas" tree for my office and what I'd like to ask is that you send me the words "Merry Christmas" in any language. Just please tell me what the language is and if what you sent says "Merry Christmas", "Happy Holidays", "Happy New Year", or whatever appropriate phrase it is. Thanks.

The really authoritative collection of amateur VHF/UHF frequency use is the _ARRL Repeater Guide_ (or maybe it's the _ARRL Repeater Directory_? Anyway, my copy is at home...) This will list all the voice repeaters and a good chunk of the packet nodes and beacons for most of North America. It is $6 and can be found at any amateur radio store or mail order firm.
For police freqs, the _Police Call_ series of books (available at Radio Shack) is probably the best I have seen. There are editions for different states/regions, so you should be able to find one for New Mexico/Colorado.
If you are interested in satellite reception, then you are getting into an area where I have not yet been able to play. I am sure someone on the net can provide a good source for satellite downlink/uplink freqs.
As for offsets, at least with amateur radio repeaters, you do not need to know the transmit offsets if you are just interested in listening. If indeed you are a licensed radio amateur (I didn't see a call sign, which is why I am saying this) then the _ARRL Repeater Guide_ lists the transmit offsets for each repeater in the directory. Access tones (for things like autopatches) are generally only distributed, for example, to members of the club that has put the repeater in operation. Often, the clubs require an extra annual fee of something like $5 for access to their autopatch. So, if you are interested in that sort of thing, then you're best bet is to get involved with your local amateur radio club (which is a good idea anyway :-)
Hope this helps.

>does, but I don't think it covers northern Arizona. On the other hand,
>Northlink might not get into Phoenix.

Northlink covers Phoenix like a glove. However, we lost our Flagstaff
site (they raised the rent from $50/yr to $280/mo!). Northlink frequencies
you may be able to use are:
Navajo Mtn (Northern Navajo reservation) 442.075/147.32
(currently not on link until we get our link on
a new site)
Grand Canyon 442.075/147.32
Mingus Mtn (50 mi south of Flagstaff along I-17) 442.150
Towers Mtn (45 mi north of Phoenix along I-17) 449.175
South Mtn (overlooks Phoenix) 442.075
White Tanks Mtn (40 mi W of Phoenix) 441.675
Telegraph Pass (Yuma): 441.8

Note: 2 meter repeaters not on link except by user command. 440 repeaters
may require PL of 100 Hz but the system IS an open system.

You can read more about Northlink in the November issue of Nuts and Volts
(cover article).

>In any case, any info you might be able to share would be much
>appreciated.

See above. Feel free to use the system. I am one of the owners.

Good Day all... I saw the request for information about trying WEFAX and
decided I had to put my 2 cents in... I've tried a couple of the commercial
WEFAX packages and used the JVFAX that is available via ftp on several of the
machines.. I found that not only is the JVFAX cheaper to make (I did mine from
the junk box) and I know it can be done inexpensively from any parts store, but
when comparing the pictures obtained, you can't tell the difference from
the commercial boards.. I'm sure the commercial stuff does other things
as well but for a trial, I recommend the JVFAX.
It works just as well and is well worth the cost... I lost interest but
it wasn't cause it wouldn't do the job.

Since you posted this in the amateur radio newsgroup, I'll tell you that my DJ-580 has a built-in pager with priority override. It operates any time I'm within a mile or so of the PacTel Paging transmitter, which is a mile or so up the road from my office. You'll have to learn what your own alert tone sounds like, though, since I can't seem to get the DJ580 to decode the page -- it just plays the audio. :-)

> Also, has anyone figured out how to program a Bravo through the 3
>contacts near the battery? (Without having to pay the paging company big
>$ to do it?)

Oh-oh. Sounds like you're one of those nasty, nothing-short-of-criminals that Motorola is after :-).

> On a more serious note, last time I was on a pager, my call-in number
>used to be occupied by a "dealer". (And I don't mean a used car dealer.)

The paging company _should_ be willing to give you a new number. I suddenly started getting pages for number "5000" at random times up to a dozen times a day. I called the paging company, and they offered to change my PIN. (They noted that I had a five-digit PIN, which (unbeknownst to me) was status symbol of some kind, and thought I should keep it unless the problem got out of hand.) I still get one or two pages a week; if anybody on the net is doing it, YOU'VE GOT THE WRONG PIN!!! :-) They also said that they'd abate the charges if the volume got to the point that I was charged extra for it.

>I will be interested to see the changes since 1980!

Well, Mike, if you do, let me know in advance. I will gladly give you
a tour of the facilities! A tour of the ARRL HQ is given on the
hour, Monday through Friday, from 8:00 to 4:00. One of our staff
will be asked to show you around.

If you would like to read about it, an electronic tour of HQ is
available by email from our ARRL Electronic Mail Server (info@arrl.org).
(send ARRL-TOUR).

If any of you all do stop by HQ, make sure to look me up!

73 and Happy Holidays from ARRL HQ, Ed -- KA1CV

OK, let me clarify this a bit. Please answer a few simple questions.

Do you mind if Myron posts old Scratchi articles?

Are you in fact encouraging Myron to post Scratchi articles?

Would you prefer Myron (or anyone else) never post another Scratchi article
again?

Once you can determine exactly what your position is, Greg, then we can
debate rationally. From your previous posts, it was pretty clear to me that
you were sending Myron the internet equivalent of a neighborly "Cease and
Desist" order.

> If you continue to claim that I said this, you demonstrate that you
> are either illiterate, or a liar.

Tsk, tsk. Greg. I don't see that I have given you any reason to degenerate
to the name-calling level. I won't be following you there.

>>No, I find that political correctness OVERSENSITISES and SEPARATES people

>
> This is probably the most remarkable example of convoluted logic that
> I've seen in a long time.

I don't think I've done justice to explaining my position. Let me go at it
from another angle.

I think it is important for all people to think of others as equals. Think
of your fellow man as just another person. This "PC" emphasis sensitises us
to the DIFFERENCES in people. So, instead of thinking of your fellow man as
"Joe" you think of him as being "black", "asian", "Muslum", "Jew",

"Christian", "Fat", "Skinny", "Homosexual", "Heterosexual", "Asexual",
"male", "female", "native", "foriegner", etc, etc.

When instead, you should think of him as just "Joe."

> And we thought Archie Bunker was imaginary.

What a creative bit of ad homenim argument. Trying to equivocate my good name
with that of the fictious bigot Archie Bunker. Ok, Greg, try to find just ONE
quote in any of my postings that shows me being a bigot.

I don't think I'm ignorant of the facts. I've seen first hand the
machine politics of SMs, directors, and their appointed minions.
By and large it's a patronage system that rivals anything a Chicago
ward heeler could dream up. I've watched, and fought, as the board
has made disasterous political moves before the FCC and within the
service as far back as 1968. I thought the ARRL leadership was finally
being dragged kicking and screaming into the latter half of the 20th
century, but recent events convince me otherwise. Note that I understand
that much of the reason for this backwardness and obstructionism is a
result of the directors trying to please their old guard constituents
who are always willing to grab their walkers and rally around the flag
at the first sign of any threat to their worship of the status quo.
To many, the most important thing the ARRL does is decide which god
forsaken rock gets to be called a new country.

> club (which is a good idea anyway :-)

I think the original poster may have been asking for PL (CTCSS) tones,
not DTMF codes that control things like autopatches. Many "open"
repeaters have PL in some high-RF areas (like here in NYC), and their
PL tones are also published in the _Repeater Directory_ published by
ARRL each year. BTW, why be paranoid? Whether the original poster is
a licensed ham or not (or may have passed the exam and be waiting for
his ticket), he can still get a copy of the _Repeater Directory_.
It's not like the store or mail-order outlet will demand a copy of his
license before giving it to him. The standard 2-meter transmit
offset, of course, is + or - 600 KHz, depending on the local band plan
and the particular repeater, but not all repeaters use such an offset.
The standard 70-cm transmit offset is + or - 5 MHz, which likewise is
public information.

> rerickso@cwis.unomaha.edu

Completely, totally, absolutely, INCORRECT. But thanks for playing!

How could SWR and PF be the same? SWR *cannot* be less than 1.000:1, while PF *cannot* be greater than 1.000. Further, your assertion tha SWR is somehow related to voltage vs. current phase would imply that it is impossible to acheive other than a perfect 1:1 SWR with a purely resistive load, which is most definitely not the case.

I'd go ahead and post the real definition of SWR, but I see that this has already been done MUCH earlier.

This is not true. When you get a new-dial in number, they just change their computer system database to reflect that your old number is inactive, and your new number is now associated with CAP code 123456790. Reprogramming of your pager is not neccessary.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: This is a perfect example of the old boy network in action. The "cabinet"
: is composed of Steve's appointees.

This isn't really true. And now I'm speaking as a member of just such
a cabinet, the Pacific Division specifically. It is accurate to say
that members of the cabinet who are appointed by the Director would
tend to share his views...but the cabinet consists of more than just
these voices. Point in fact..SM's are also members of this cabinet.
Each of them is elected in their own right to run the ARRL affairs of their
respective sections. They are definately a distinct and contakerous bunch
who aren't in any way really owing to the Director. (I ought to
know...I are one ;-)

: Naturally they reflect his own views
: to a large extent. While the intent may be to keep a large number of eyes
: and ears out in the division, and that's good, the result is often, though
: not certain in this particular case, to be more of an amen chorus from
: the choir. The current field organization is machine politics at its
: most raw.

I haven't seen that to be the case in these meetings. A great example
was the No-Code issue, talk about splitting down the middle. Another
more recent example was the digital committee report on the HF STA.
And here is explicitly a case where the rank-and-file changed the
intended order of things. League policy did a complete about-face!

Another point is that the field organization really doesn't play
into the political structure that much. At least in the Pacific
division. The only voices the field organization have into the
cabinet are the SM's...and they are a vocal but not necessarily
a majority view. Other folks, like the Public Service Advisory
Rep, or the VHF/UHF committee rep also carry alot of weight both
in representing their respective communities and the director's
interest on those committees...and these are completely outside
the field organization. The Field organization is ARES, the OO
corp, the public relations efforts, etc... these organizations
are run by the SM's and the only real link to the director's cabinet
is through the SM's.

: The problem with the League structure as I see it is that it's a
: one party state controlled mainly by the apparatchiki. It needs a
: strong loyal opposition to keep it vigorous and honest.

Again, I can't buy this statement...and mostly because of direct(or) ;-)
experience within the league power structure. I've several times
influenced by director's opinion...but this was mostly due to
direct phone calls to yell at him as oppossed to the cabinet meeting
structure. Some times the calls paroted concerns local members
had thrown my way(though I always tell them to call the director
in persone!) and other times the concerns were merely my own
at which point I was wearing my ARRL member hat.

: I think
: more directors would help, and directors drawn not just on geographic
: sections but also from interest groups in amateur radio. If we had

I don't like this idea at all. There are already 15 directors...isn't
that enough. As for the different areas of interest there are standing
committees on most of these topics that represent those interests to the
board. PSAC, DXAC, etc.

: a director from the DX community, a director from the packet community,
: a director from the repeater community, etc in addition to the geographic
: sections, we'd likely get a more responsive organization. I also think
: it would be good if members of the field organization were also elected
: by the groups they would serve,

Where do SM's come from? They are elected at a local level.
I'd say we already do that.

: IE traffic people would select their
: managers etc. This happens to an extent informally now, but I think
: it should be more of a formalized "merit board" type of thing to
: reduce the machine politics in the present field organization.
: (Lord knows though that it's hard enough to find *any* volunteers
: to take some of these jobs.)

: Gary

Gary, I'd argue that the real issue is how many people take part in
directly talking to their directors, and how many take part in elections
of same. There are some good signs in this are. The last director's
election we had something like 30% participation by the members in the
Pacific division. This time it was up to better than 40%! Not perfect
but getting better.

Steve KA6S

5242. Report on VK2WI Broadcast, 12 Dec 93

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-14 23:21:06 UTC
From: dave@eram.esi.com.au
Message-ID: <5002@eram.esi.com.au>
Source record: 273253
Cross-posted to: aus.radio,rec.radio.amateur.misc

What follows is a report of the events leading up to and surrounding the VK2WI Evening Broadcast on Sunday 12 December, 1993.

I was invited to produce a report on the Council Meeting held on 10th December for inclusion in the Divisional Broadcast on Sunday 12th December; this I did, and it was posted on the packet network as a bulletin sent "WIA @ VKNET", titled "VK2 Divisional News" (from VK2WI), BID "24545_VK2RWI"; it was also sent to the world USENET newsgroups aus.radio, rec.radio.amateur.misc, and rec.radio.info, with Message-ID "4986@eram.esi.com.au". If there is anyone who has not seen that report after a reasonable time, please let me know, and I will forward a copy by whichever means are appropriate.

The rostered morning broadcast team assembled at Dural on the morning of Sunday 12th December, to present the scheduled morning broadcast. Also in attendance were several visitors, including (but not limited to) Tim Mills VK2ZTM (Councillor), Cesar Miranda VK2TCM (Councillor, Broadcast Officer, and Dural Property Officer) and Bob Yorston VK2CAN (Councillor).

The Divisional President, Terry Ryeland VK2UX appeared just before broadcast time. Following the usual banter he went into the Engineer's booth and remained there for a considerable period during the broadcast.

It should be noted that during the morning broadcast there were three Divisional Councillors present (apart from T.Ryeland VK2UX): T.Mills VK2ZTM, C.Miranda VK2TCM, and R.Yorston VK2CAN. It is known that at least two other Councillors, Roger Henley VK2ZIG and subsequently Julie Kentwell VK2XBR, were in agreement that the report on that meeting be aired; this is a majority of the VK2 Councillors.

It should be noted that the callbacks to the morning broadcast were heavily in support of the inclusion of the report on the Friday Council meeting. It should also be noted that there was some concern expressed in the past over the broadcast text being altered, and this had led to the attempted disciplining of a member. To prevent this, it was agreed that the broadcast notes be removed and returned in time for the evening broadcast, to ensure that the official notes were read out unaltered on that broadcast.

Late on Sunday afternoon, the Divisional Secretary, Roger Harrison VK2ZTB contacted the scheduled engineer for the evening broadcast, and

informed him that the broadcast was "cancelled" on "[his] authority". No reason was given, and being somewhat perturbed over this turn of events this rostered person contacted R.Henley VK2ZIG (a Divisional Councillor), and advised him of this sudden decision.

Following many telephone calls, a majority of VK2 Councillors decided that the evening broadcast goes ahead regardless of any attempt to prevent same. As a result, two Councillors, R.Henley VK2ZIG and R.Yorston VK2CAN, gained access to the Dural premises, after encountering some resistance in the form of an unauthorised padlock. As none of the aforesaid Councillors was aware of this new lock, particularly the Dural Property Officer C.Miranda VK2TCM, he gave his permission to enter the premises regardless, with care to not damage WIA property.

When the evening broadcast team appeared, the premises were secured against any interference to the airing of the broadcast script. It was noted that various items had disappeared from the Dural transmitter site since the morning broadcast; to wit: the logbooks, the visitors book, a broadcast tape, and minor items. It was not clear why these items had disappeared, but improvisations were made.

During the broadcast, a telephone call was received from the Divisional Secretary, demanding that the broadcast cease immediately, by his authority. After advising him of who was present at Dural, he was ignored, and the broadcast continued. It ought to be mentioned that the Castle Hill Police were advised beforehand of the intention of the majority of Councillors that the broadcast goes ahead, and that they may receive some calls that may state otherwise.

During the callbacks, a police car arrived. It was revealed by these Police that they had received a FAX, on Divisional letterhead, from the Divisional Secretary, advising them that a break-and-enter had occurred at the Dural site, and that they were to arrest those within, including the two Divisional Councillors. It is noted that the Divisional Secretary had already been advised of the situation at Dural, namely that a majority of Councillors had decided that the evening broadcast go ahead regardless of any attempt to interfere with it, or to alter the legitimately-prepared script.

The police were advised of the situation, namely that it was a purely internal dispute, and they went on their way. The evening broadcast concluded; the logs were signed off; and the premises were secured.

-- David Horsfall VK2KFU, acting under instruction from Cesar Miranda VK2TCM (Divisional Broadcast Officer and Dural Property Officer), Julie Kentwell VK2XBR (Publicity Officer), Roger Henley VK2ZIG, Bob Yorston VK2CAN, and Tim Mills VK2ZTM; all of whom are Divisional Councillors (with the exception of VK2KFU). 14 Dec 93.

I misplaced the info from the discussion a couple of weeks ago. Could someone tell me where LOG-EQF is archived? I have checked the usual sites and cannot find it by that name. I had a copy but it got trashed during a recent HD crash.

Zia gets into the Phx area from both the east and the west. To the east is Pinal Mountain. 145.25- pl is 162.2. Pinal Mountain is located just south of Globe/ Miami at about 7000' and has good coverage of the middle of the state.
From the west is a repeater on 146.70....but I must confess I don't go into the system that way and I not sure of the split. The pl is the same however.

Good luck.

ps The system has been having some problems of late. It's had to get into the New Mexico half of the system. Over the weekend the complete system was operational for about 18 hours. As it is now the link from Greenley to Jack's Peak is down. Due to the system configuration, if you can make it into the machine on Mt. Lemon Near Tucson (147.16+) you will be able to get to the east side of the system. The ZIA system has wonderful coverage of the southwest from western Calf. thru Arizona, New Mexico and some of Texas. If you are traveling the area check it out.

Rick Aldom

In a previous article, paulc@fc.hp.com (Paul Christofanelli) says:

>Hello all,
>
>...I've heard of the Northlink system, and ZIA. Do either of
>these get into Phoenix? It appears from the repeater directory that Zia
>does, but I don't think it covers northern Arizona. On the other hand,
>Northlink might not get into Phoenix.
>

ZIA-link does get into Phoenix. However, it is not always "up." Lately,
it seems to be down more often, at least here in Arizona. ZIA covers the
southwest from California through Arizona and New Mexico to West Texas.
It seems pieces are up but not necessarily all the links.

I'm afraid I can't help you with Northlink.

NOTE: The Effective Sunspot Number for 13 DEC 93 was 45.0.
The Full Kp Indices for 13 DEC 93 are: 1o 2- 0+ 2o 2o 1+ 1- 1o

SYNOPSIS OF ACTIVITY

Solar activity was low. Two small C-class flares were
observed today but were not optically correlated. Three new
regions were assigned: Region 7634 (N12W82), 7635 (N03E76), and
7636 (N14E15). All are small and simple in structure. Region
7635 is the return of old Region 7520 (L-273, N04) which pro-
duced 3 C-flares on its previous disk transit.

STD: Strong Ca XV and very strong Fe X emissions were observed
on the southwest limb near S20 today and may be related to the
departure of Region 7629. A Yohkoh x-ray image has been
appended to this report showing the location of the negative

polarity southern polar coronal hole extension and the
southwest limb emission. A new (apparently minor) region is
approaching the east limb.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to increase to active levels sometime late tomorrow
and continuing through day two and part of day three. The
increase is expected to result from effects of a favorably
positioned coronal hole.

Event probabilities 15 dec-17 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 15 dec-17 dec

A. Middle Latitudes
Active 15/30/30
Minor Storm 05/20/20
Major-Severe Storm 01/05/05

B. High Latitudes
Active 15/30/30
Minor Storm 05/25/25
Major-Severe Storm 01/10/10

HF propagation conditions were near-normal over most
regions except the high and polar latitude paths where sporadic
auroral fading has continued to produce periods of poor
propagation. No improvements in these areas are expected
before the anticipated coronal-hole-related disturbance
produces additional signal degradation late on 15 and perhaps
more particularly on 16 December. At that time, minor signal
degradation is expected to occur over the middle latitudes as
well. Night-sector paths will be most heavily affected.

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
13 Dec: 1509 1619 1724 B9.6 Surge

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: CURRENT X-RAY EMISSIONS FROM THE JAPANESE YOHKOH SPACECRAFT
==

I have been using Dxbase for sometime now (about 3 years I think) AND
i FIND IT TO BE A GOOD LOGINFG PROGRAM. It can keep track of about any
award and it is realiable. It also interfaces with packet and controls
the rig. So seems to have about all the features one would expect. In
94 they say they will have a windows version ????

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9) or the Australian mirror at grivel.une.edu.au
(currently at IP number 129.180.4.7).

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
```

field_day_92 - field day rules for 1992
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
icom_ic_w21at_mods - increases the number of bands on an Icom IC W21AT
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
jlem.zip - Program, w/source, for 2kx8 ROM emulator (QEX 1/93)
j-poles - description of j-pole antenna made from twin-lead
lead_acid_batteries - essay on lead-acid batteries
license_plates - guide to ham calls on license plates
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
manufacturers - names and addresses of ham gear manufacturers
mav11.ps - postscript image of MAV-11 amplifier PCB (QEX 9/93)
mods - directory containing radio modifications
motorola_ge_service_man - how to get service manuals for Motorola and GE rigs
nasa_select - places where you can hear NASA SELECT broadcasts
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
nprm_93_85_text - text of docket 93-85 (message forwarding systems)
packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
packet_header_standard - description of BBS message header standards
packet_misc - miscellaneous packet info
packet_software - list of packet software versions
phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
pr_docket_92-136 - text of FCC PR Docket 92-136
qex1193.ps - Postscript image of 13cm preamp board, 11/93 QEX "RF"
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
quest_pool_novice - novice question pool - good after 7/1/93
quest_pool_technician - technician question pool - good after 7/1/93
quest_pool_general - general question pool - good before 6/30/94
quest_pool_advanced - advanced question pool - good before 6/30/95
quest_pool_extra - extra question pool - good before 6/30/96
repeater_map_proj - description of Electronic Repeater Mapping Project
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
tasm.zip - table-driven assembler for weavrdsp.zip file
usenet_purchases - tips on buying and selling via USENET

weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are
a de-facto "Required Reading List" to provide definitive answers and
pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small
PostScript graphics that you feel would enhance this collection are most
welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining
these valuable archives, as well as all the authors who wrote and submitted
the information contained in them.

Questions about FTP mirroring and access to appropriate software should be directed to me, or do an Archie search on the keyword "mirror."

For those without FTP access (and only those without FTP access, please), there is an FTP mail server at ftpmail@decwrl.dec.com (IP 16.1.0.1). Send the word "HELP" to this address for more information.

Additional documents on Usenet and other newsgroups may be obtained from rtfm.mit.edu (IP 18.70.0.209) via anonymous FTP or via mail server (send the word "HELP" to mail-server@rtfm.mit.edu).

The American Radio Relay League has recently made available a mail-server to distribute many of their informational documents in electronic form. Send E-mail to info@arrl.org with "HELP" in the message body for more information.

Yet another mail-server has been made available by Steve Harding, KA6ETB. Send E-mail to ham-server@grafex.Cupertino.CA.US with "HELP" in the message body for more information.

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

ARLD068 RTTY Honor Roll created

RTTY Honor Roll Created

Today, the ARRL Awards Committee voted 6 ''yes'' and 1 ''no'' to accept an ARRL DX Advisory Committee (DXAC) recommendation to create an Honor Roll for RTTY DXCC. Qualification for this new Honor Roll is the same as for Mixed Honor Roll--318 current (not deleted) countries. (January 1, 1994 Eritrea will be added to the DXCC Countries List, and the level will rise to 319 current countries.)

This action makes Honor Rolls for all DXCC ''mode'' awards. The RTTY DXCC accepts contacts made using Baudot, ASCII, Amtor, and other non-CW digital protocols.

Persons who qualify for RTTY Honor Roll will be recognized based on their RTTY DXCC records. No other action is required.

BID: $ANS-345.01

AO-13 Experiences Long Solar Eclipse Which Affect Transponder Operations
James Miller (G3RUH) of the AO-13 Command Team reports that because of the long duration of the solar eclipse periods that AO-13 is experiencing, they have been forced to severely curtail transponder operations. Some of the eclipse periods have been as long as 2 hours. Battery bus voltage has become so low that the net affect has been that there has been no battery charging from orbit to orbit. The safety threshold on the battery bus voltage is currently set 12.6 volts. When the bus voltage drops below 12.6 volts, the on-board computer shuts down the beacon and brings all the other subsystems on AO-13 to a "low-power" state. Currently, with the transponders and telemetry beacons turned-off, the total current consumption on AO-13 is around 1 ampere. In attempt to remedy this low battery voltage problem, the Command Team has made an spacecraft attitude re-adjustment to Bahn Longitude 245 degrees and a Bahn Latitude of -5 degrees. But under the current solar eclipse circumstances, even this has not been sufficient to solve the problem of low battery voltage. So it was necessary to take even further steps including turning off all transponder operations on AO-13 until between Friday December 10 and Monday December 13, 13-DEC-93 around 03:28 UTC. It is hoped that this will bring AO-13 through this difficult time period, however, there is no guarantee that the above actions will be enough. It should be noted that AO-13's batteries are now 5 years old and the Command Team feels that is may be necessary to take a close look at the battery charging software and presets to determine if they need to be adjusted for the age of the batteries.

It is requested that all AO-13 users keep a close "ear" to the telemetry beacons which can be heard on a downlink frequency 145.812 MHz or 2400.646 MHz for the latest information on the transponder schedule.

The Command Team is always interested in hearing from the user any "constructive feedback" about AO-13 transponder operations.

The AO-13 Command Team ccurrnetlu consists of the following:

Peter DB2OS @ DB0FAU
James G3RUH @ GB7DDX
Graham VK5AGR @ VK5WI

IO-26 SUFFERS OBC CRASH

HR AMSAT NEWS SERVICE BULLETIN 345.02 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-345.02

IK2OVV Explains the IO-26 On-Board-Computer (OBC) Crash

After 45 days of uninterrupted BBS service on IO-26, on 8-DEC-93 at approximately 11:30 UTC, ITAMSAT IO-26 suffered a crash during a pass over Europe. IO-26 is now in an undefined status, with its trasmitter on but no MBL telemetry; the Command Team will try to regain control of the satellite in the next passes over Europe. The cause of the crash is still unclear; the Command Team is investigating on some new software used to access the BBS services. In the past, some other MICROSATs crashes were due to bugs found in the user software. ITAMSAT Command Team, while recommending users not to uplink to the satellite at this time, would like to receive reports about IO-26, especially regarding the presence of just the HDLC flags on the downlink or some sort of telemetry, either MBL or PHT style. However, after examining the memory dumps taken from IO-26, Alberto Zagni (I2KBD) and Harold Price (NK6K) have decided to begin the uploading of the high-level software to restore IHT (ITAMSAT Housekeeping Task) capability. The cause of the crash is still unknown; I2KBD and NK6K are working on the memory dumps, but the crash destroyed part of the internal logs kept by the high-level software. Since the crash happened as one of the Ground Command Stations in Milan was uplinking to the satellite using a new ground software (which has not yet been fully tested), there is chance that this was the cause of the crash. The ITAMSAT Command Team has decided not to turn the BBS on after the reloading of the software; the Team will start some Whole Orbit Data (WOD) collection in order to fully optimize the energy budget onboard the satellite. This will enable IO-26 to have higher power settings on the downlink. It is estimated that the high-level software will be working by this soon; stay tuned on the downlink for any news!

The ITAMSAT Command Team would like to thank again Harold Price (NK6K) for the great help in debugging the memory dumps and the Eyesat Command Team for helping during the initial recovery.

ITAMSAT Command Team can be reached via Internet as i2kbd@amsat.org or ik2ovv@amsat.org, and on Compuserve HAMNET.

SILVER SPRING, MD DECEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-345.04

Weekly OSCAR Status Reports: 11-DEC-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Nov 15-Jan 31
Mode-B : MA 0 to MA 95 ! / Eclipses, max
Mode-B : MA 95 to MA 180 ! OFF Dec 07 - 24. < duration 136
Mode-B : MA 180 to MA 218 ! \ minutes.
Mode-S : MA 218 to MA 220 !<- S beacon only
Mode-S : MA 220 to MA 230 !<- S transponder; B trsp. is OFF

Mode-BS : MA 230 to MA 256 ! Blon/Blat 240/-5
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the FO-20 operating schedule:
Analog mode: 15-Dec-93 07:41 -to- 22-Dec-93 8:05 UTC
Digital mode: otherwise noted above. [JJ1WTK]

IO-26: ITAMSAT sufferred a system crash after 45 days of flawless operations. The command team is gathering data to try to determine the source of the problem. They state that the transmitter is on, but the BBS is not open.

AO-16: Operations are normal. [WH6I]

LO-19: Operations are normal. [WH6I]

KO-23: Functioning normally. There have been some questions regarding image files. When WH6I see some images on KITSAT, he trys to list them, but files on that satellite are only active for maybe 5-6 days depending on how much new material is uploaded. Therefore, by the time this status report makes it to the ANS status report, the files may be gone. Satellite image files on KITSAT have names in the form KAI?xxxx where ? is either W or N to indicate a WIDE or NARROW view image. The "xxxx" is a serial number. These files are about 350Kbytes large and can be seen in the directory in PB by hitting F4 to see the list of files generated by the satellite. They are usually in pairs with a wide and narrow view file. These files are downloaded just like anyother file. The program DISPLAY which is often up on the birds willdisplay these images, and it will display whatever there is in the xxxx.ACT file of the image, so that you can look at a partial download and decide if it is worth pursuing. [WH6I]

RS-10: After a period of inactivity, the RS-10 QSO robot is QRV again. The downlink is approx 29.403 MHz, and uplink is +/- 145.820 MHz. If you are "into" the robot receiver, your CW from the few KHz wide passband will be retransmitted on the robot's fixed frequency. The speed of your CW response is not important; it just needs to be steadily and cleanly sent. K0BJ notes that he just changed from a vertical dipole to a J-pole. It seems so far to be about as bad with QSB as the dipole, but the J-pole did seem to peak more in the longer, low-elevation parts of the pass. The next experiment K0BJ will perform is with a turnstile antenna.

POSAT: CT1ENQ would like to inform that the Portuguese satellite (POSAT) is now prepared for amateur radio use. Please contact Portuguese AMSAT group, AMSAT-PO, for more information.

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on

INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

ARLB116 Pick your call sign

Pick your call sign

The FCC today proposed that amateurs be able to choose their own call signs, once a new automated processing system is in place at the Commission's Private Radio Bureau.

Under the proposed system, amateurs wishing to apply for an available call sign would be required to file a form and pay a fee.

Trustees of club and military recreation stations also would be eligible for the new program. Also today, The FCC canceled a rule it adopted last summer establishing a call sign administrator program for amateur club and military stations, a program that was never implemented.

The FCC said that at the present time call sign selection by new licensees was not feasible, but left the door open for that possibility in the future.

The FCC said that the new PRB computer might eventually allow amateurs to check for themselves the availability of call signs, and that the new system might be used to allow electronic filing of applications, making the process easier for applicant and FCC alike.

At the meeting today, the first under new FCC Chairman Reed Hundt, Private Radio Bureau staff began by telling the FCC commissioners that recent Nobel Prize winners Joseph Taylor and Russell Hulse had begun their scientific education as radio amateurs.

The ''vanity'' call sign plan was unanimously approved by the four FCC commissioners. The text of the Notice of Proposed Rule Making is not yet available but is expected to be issued shortly.

The only thing that is certain is the number. It represents the
area where the amateur was residing when they received their
call. In the 1970's, the FCC (our regulatory agency) began to
allow amateurs to keep their call when they change residence into a
different area. This is why, for instance, my call is WB0FEW but
I now live in the 5 call area. I originally received my call when
I was residing in the 0 call area. Maps showing the areas can be
found in the callbook, gotten from the ARRL, and many other
amateur radio suppliers.

We also have a new higherarchy in call signs. The American amateur
service has different levels of licensing. Amateurs may choose to
receive a new call sign representative of the license class when
upgrading or renewing their license. Amateurs that have been
around since before the 1980 will have a W, WA, WB, or K call
(unless they have chosen to receive a new call). The W call could
have 2 or 3 letters after the number, the reset would have three
letters after the number. A WA or WB call usually indicated that

station was a Novice class station first.

Today, our call signs are still issued by area. The following
shows how the new call signs are issued based on license class:

Novice/Technician: KX9XXX
Technician Plus/General: N9XXX
Advanced: W9XXX, KX9XX
Extra: W9XX, K9XX, N9XX, AX9X, KX9X, NX9X, WX9X, AX9XX

(X=any character, 9=call area)

There are still special prefixes for non-continental US areas such as
Hawaii, Alaska, and other territories. Currently, the last call sign
listed for each class above is what is being issued. The others have
been used up. Also, I may have left out some.

Now if this doesn't confuse you, I don't know what will! :)

Hope this helps.

73,
Pete, WB0FEW, Rowlett, TX, USA

But the gutted laptop probably wouldn't tolerate the vibration inherent
in the aircraft.

There should be as little behind the telemetry as possible, and it
ought to be sent down in as raw a form as possible, and processed
by a machine on the ground.

In fact, why use packet at all? Why not send out a continuous telemetry
stream on one frequency/band and listen constantly on another frequency
for commands (i.e. full duplex)? Then you don't have to deal with packet
switching, collisions at critical moments, T/R switching or anything
like that.

Targeting packet for telemetry is sort of backwards engineering. Figure
out what you want to do, and do it the best way, instead of forcing a
solution into the problem.

>
>OK, let me clarify this a bit. Please answer a few simple questions.

Have you done your homework this time, 'counselor?'

>Do you mind if Myron posts old Scratchi articles?
Please refer to my first posting on the subject. No, I don't 'mind.'

>Are you in fact encouraging Myron to post Scratchi articles?

I am neither encouraging nor discouraging him. I would suggest that
he temper his posting of material which some people regard as racist
with some contextual information. If he chooses to follow that suggestion
it's his choice. If he chooses to follow that suggestion it's his choice.
If he chooses to follow that suggestion it's his choice. If he chooses
to follow that suggestion it's his choice. Now, Bill, go back and re-read
that last paragraph three or four times, and perhaps you will understand
it and remember it for at least the duration of the thread. I'm sorry
but there are some words with more than five letters, but I can't
bring myself to lower the text to below second grade level in the hope
that you will read it before continuing to tilt at windmills.

>Would you prefer Myron (or anyone else) never post another Scratchi article
>again?

It's a mixed bag. The meta-discussion has demonstrated a good deal about
the current American psyche that's worth noting. I would hope that he
would follow my suggestion. (Remember the suggestion. Read it again,
now Billy. Now what was the suggestion?)

>Once you can determine exactly what your position is, Greg, then we can
>debate rationally. From your previous posts, it was pretty clear to me that
>you were sending Myron the internet equivalent of a neighborly "Cease and
>Desist" order.

Again, if you read, rather than making it up as you go along, perhaps
you won't get your knickers in such a twist. I have determined my
position, stated it, re-stated it, hashed it, ad nauseum. If you
don't like the fact that I refuse to engage you in debate of something
that I didn't say, tough shit. Go join a debate team if you want to
play 'lets pretend.'

>> If you continue to claim that I said this, you demonstrate that you
>> are either illiterate, or a liar.
>
>Tsk, tsk. Greg. I don't see that I have given you any reason to degenerate

>to the name-calling level. I won't be following you there.

Bill, either you are deliberately mis-representing my position, again
and again, or you are unable to read the materials to which I've
referred you, again and again. Those who mis-represent are liars,
and those who can't read are illiterate.

>I think it is important for all people to think of others as equals. Think
>of your fellow man as just another person. This "PC" emphasis sensitises us
>to the DIFFERENCES in people. So, instead of thinking of your fellow man as
>"Joe" you think of him as being "black", "asian", "Muslum", "Jew",
>"Christian", "Fat", "Skinny", "Homosexual", "Heterosexual", "Asexual",
>"male", "female", "native", "foriegner", etc, etc.
>
>When instead, you should think of him as just "Joe."

Where you make the mistake is that you have to continue to respect
what is [insert all those descriptions] about "Joe." And if "Joe"
has been kicked for being one of those things, you might even consider
not using it for comic relief. Otherwise, you're going to wonder why
"Joe" doesn't like you very much.

>> And we thought Archie Bunker was imaginary.
>
>What a creative bit of ad homenim argument. Trying to equivocate my good name
>with that of the fictious bigot Archie Bunker. Ok, Greg, try to find just ONE
>quote in any of my postings that shows me being a bigot.

Well, let's see. You took what I said, and made up your mind that it
was the standard "PC" line, and that it must be that I was therefore
trying to drive Myron away, even though that was in your mind. That,
Bill, is a form of bigotry. We don't even NEED to talk about racism
to demonstrate that you are a bigot. So, if you want a quote, let's
use that 'cease and desist' line, where you have attributed to me a
position that is entirely concocted from your pre-conceived notions
and prejudices. You have compounded that bigotry by continuing to
engage me on that basis when you have been told, time after time,
that 'no that is not my position. If you would please read my
position, we can discuss it.'

But no, you've lumped me into certain categories in your mind, and
decided that you know what you know, and proceed on on that basis
regardless.

That's bigotry. Whether your fundamentally bigoted approach extends
to your view of racial issues, I'm not in a position to estimate.

Geez, Bill, you even did an Archie-ism with the use of 'equivocate'
above. He was famous for his malapropisms.

The only thing you forgot to do was to tell me that 'convoluted logic'
is the 'kind of thinking that made this country great.'

I would think that the FCC should be more concerned with reducing the
lag time it takes to process amateur radio licenses in general (something
that would benefit all amateurs) rather than something silly like
"vanity callsigns" (something that will only benefit the few vain
enough to want a call with their initials).

I think the ability to pick your own callsign will come as a byproduct of
the restructuring which, incidentally, will reduce the lag time. They're
just agreeing to build it in, I think. Ability to check for valid, available
callsigns was part of the proposal, so one can only assume that this is
going to be a fairly advanced (and finally useful!) system. No more
punch cards for OUR FCC, my friends...

High tech? I've got high tech for you...

I have been told that NASA-Goddard, a center of "high technology," still

1) Uses punch cards to run payroll checks
2) Was sorting them BY HAND recently because the sorting machine broke

Just some food for thought...

Perhaps you missed the original discussion about the FCC's new computer system some number of months ago in which one of the stated benefits was a dramatic reduction in license processing time. I believe the stated target was in the one to two week range.

Can someone who remembers the details better remind us what the new computer system is supposed to provide for us? Also can someone supply the particulars on how it is being implemented (hardware, software) and by whom?

Another question that comes to my mind is if indeed the processing time for licenses is due to drop dramatically, what is the need for the instant licensing procedure? Certainly if the FCC is clearing applications almost "instantly", one would not expect that they would continue to have problems with people calling to find out where their paperwork is.

Since the VEC system adds upwards of 20 days to the license
processing time, I doubt that we will ever see a 1-to-2 week
range.

"Once a new automated processing system is in place at the Commission's
Private Radio Bureau", the lag time ought to go WAY down, and they'll be
able to offer "vanity callsigns" without any extra effort. I think the
FCC has shown absolutely no inclination whatsoever to *increase* their
workload above what it is now, so I don't think "vanity callsigns" are
their first priority. If you've got to assume the FCC are a bunch of
idiots, at least give them credit for being lazy idiots. :-)

5270. Kenwood TH-78a HT mods (15 Dec 93)

Subject: Kenwood TH-78a HT mods (15 Dec 93)
Date: Wed, 15 Dec 1993 08:48:24 -0800

The Complete (and Mostly Accurate) Guide to Undocumented Features
of the Kenwood TH-78a Handheld Transceiver

15 Dec 1993

PURPOSE: This file contains descriptions of all the undocumented features of the TH-78a I could find as of this date. It doesn't attempt to explain anything covered in the manual, but it does pass on pointers to interesting uses of documented features (such as using message write 0 as a start-up screen).

VALIDITY: This file supercedes the following: th78a-0.mod, th78a-1.mod, th78a-2.mod, th78a-complete.mod, th78a-new.mod, th78a-warn.mod. I've run this file by the authors of those mod files, where I could find them. Be assured that you have the best information about the TH-78a we could put together.

WARNING: This information is furnished without guarantee or warranty. Working with surface-mount diodes is delicate work. Or as Eric Williams (wd6cmu@netcom.com) so eloquently says "Lawyer bait: If you screw up your radio, it's your own damn fault, don't blame me. (But it worked on mine.)" These modifications (mods) may or may not work on your particular unit according to Kenwood. I certainly accept no responsibility for your handiwork or your transmitting on frequencies that you're not allowed to. You may have good reasons to transmit outside of ham bands as I do during search and rescue work (typically on CLEMARS, NLEMARS, and CALCOORD).

ACCURACY: Please mail me at msattler@netcom.com if you see any omissions or mistakes. Make sure to pass along the date of the version you're seeing (it's just under the title).

THANKS: Thanks be to all those who helped me, including George_Lin@mindlink.bc.ca, Brendan_Hoar@notes.pw.com, rfc@allegra.att.com, wd6cmu@netcom.com

AVAILABILITY: I'll attempt to have the latest version of this file (named "th78a.kensho") placed at the following mod servers:

Server Directory
----
ham.eetech.mcgill.ca /pub/ham-radio/mods
(aka atlas.eetech.mcgill.ca)
bubba.business.uwo.ca /mods/
garfield.catt.ncsu.edu /pub/hamradio/HAM_MODS
kilroy.jpl.nasa.gov /pub/hamradio/Mods
ftp.geo.brown.edu /pub/hamradio/rigmods
(no longer accepts anons)

And one mail server:

pcserver@novell.business.uwo.ca
examples of main body email requests are as follows:

Stuff that didn't fit anywhere else
Game Mode

What is a "new" TH-78a?

Kenwood says that any TH-78a with a serial number greater than 405xxx is considered a "new" TH-78a. I've not authoritatively determined the difference between the old and new models, but the mods differ, so it's worthwhile to check the serial number. The ARTSCI 5A techmod book calls this the "Later Model (with green jumpers)". I use the terms "early model" and "late model" throughout this document.

William_A._Kirsanoff@smtpgty.anatcp.rock says:

"I can tell you the difference between an "old" and "new" TH-78A. The "old" 78As had a fault in the microprocessor resulting in an inability to store a pl tone in the call channels (and possibly some other bazaarities). People who complained got the new processor installed by Kenwood when it became available (there are actually 2 microprocessors in the HT, I think the one changed is IC 5, mine has a paper label pasted over it). It seems they also added the jumpers on the programming diodes, probably to keep hams from using their soldering irons on the SMC diodes while making mods. :-) When my "old" unit was upgraded to the new processor, my mods from removing the diodes remained in place."

Basics of modifying the Kenwood TH-78a

To open the radio, follow the instructions on page 64 of the manual. (Unscrew four screws and break apart the radio halves.) The two TX/RX busy indicators (LEDs) have rubber seals placed over them. These have a tendency to fall off when opening or closing the radio.

All position references in this document assume that you are looking at the CPU board with the rotary encoders and TX/RX busy indicators at the top. If you have installed the ME-1 EEPROM, I recommend that you temporarily remove it to facilitate access to the diodes.

You'll see a brass shield about one centimeter square covering the processor chip and the surface-mount diodes on the back half of the radio. De-solder the shield's four corners and remove it. (I used an right angle surgical tweezers in conjunction with the pin-point soldering iron to lift the brass shield.)

Uncovered are the processor (which we ignore) and six surface-mount diodes, numbered sequentially from one through six (D1 - D6), top to bottom. These are about one millimeter wide; remember the note about skill and finesse. New model radios also have two large loops of green wire, numbered one through two (W1 - W2), bottom to top.

You'll need a pinpoint-tip soldering iron and some braid to wick away the solder before you lift out the diode. Alternatively, Rich Garcia (n2czf@wt3v.nj.usa) suggests leaving the diode in place. "I found if you BRIEFLY touch the iron to the right side lead while gently pulling up on the SMC diode it should completely come off without needing to apply heat to the other side and further risk board damage."

After you perform some or all of the mods listed below, replace the brass shield and re-assemble the radio. Then reset the processor (as documented) and re-enter any frequencies into memory.

Potential case design flaw

>From wb1e@k1rqg.me.usa.na (which no longer exists):

In the course of performing mods on my Kenwood TH-78a dual band handheld, I've discovered a potential flaw in the case design. While handling my walkie

one day (after the mods were done), the display went blank and I could not turn the radio back on. With the radio split in half again, I could turn the radio back on but discovered all the memories were erased. The cause turned out to be some component pins on the front face coming in contact with the square bodies of the two volume/channel/squelch switches, when the case is screwed back together snuggly. I placed small strips of electrical tape on the sides of the switches to insulate, and reassembled; problem solved. Now I have to reprogram the darn thing....

molson@bml4380.cpg.cdc.com (Mark Olson) said:

There is a warning on some of the rig mod bulletin boards about this. The problem is that pins on the back side of the PCB that is mounted on the front half of the TH78 can come into contact with the volume control housings mounted on the PCB on the other half of the unit. My radio had this problem until I put electrical tape across these housings. Symptoms were: Display blanking momentarily and the unit power cycling, sometimes causing memory erase, when pressure was applied to the front of the unit or to the volume controls. I originally thought that it was a loose battery connection...

Open up the radio and you will see what I mean... Believe me, the fix is simple and it works.

C-17 design flaw

William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM said:

"The 78A WILL lose C-17 on the control board if dropped, period. This causes loss on receive audio on the left-hand side of the radio. The solder pads for that cap are not big enough. If you find the need to replace C-17, use a gap-fill cyanoacrylate glue like Zap-A-Gap (tm) to increase the device footprint. I have learned the hard way. Otherwise, I have found it to be a fine radio. My only problems have been related to the C-17 issue and attempts to rectify it. Had I been given the above advice, it would have been a one-time only issue. As it is, I took out one of the microprocessors yesterday looking for a bad solder joint that was induced by my attempt to solve the C-17 problem (sigh). This radio gets a lot of use and a lot of travel. C-17 is the only thing that I have broken with the case closed. :-)"

Mutually exclusive mods

Some of these mods are reputed to be mutually exclusive. You must choose one of the following levels of performance:

The "beyond MARS" mod - gets you the widest tx/rx
The "MARS/CAPS" mod - halfway there
The "extended receive" mod - more of a good thing

plus

The "cross-band repeat" mod - a repeater that weighs almost nothing

There is no mods that manipulate diodes D1 or D2 (I've seen it suggested elsewhere that this is toggles the USA/Europe-ness).

Brendan_Hoar@notes.pw.com suggests:

"I think removal of D1 causes "Forced Channelized Mode", at least on the "new" radios. If you put both VHF and UHF memories into a TH78A without D1 and
power on, you are stuck in channel mode until you do a full memory reset. Remember, you can't add frequencies or do any tuning in channel mode.

If you think about it, you'll want to be very careful not to let D1's circut become an open circut."

The "beyond MARS" mod

This mod provides the widest possible range of tx/rx. The mother of all TH-78a mods.

To mod (early model): remove diode D5 only.

To mod (late model): remove diode D3 and cut wire W1. D5 has priority over D3, so if you've already made the mods for the old model (which included the removal of D5) you must resolder D3 into D5.

Yields RX 50-179.995, TX 136-179.995, RX 300-399.995, RX 400-511.995, TX 400-511.995, RX 800-999.995.

To use: buttons operate the same way as described in the "extended receive" mod, except that you can transmit on a much wider range.

NOTE TO ALL: I haven't been able to verify the actual operation of my radio on all these freqs. Kenwood talks about the difference between the "dialable" range and the operating range. I'd like to come up with a chart for each level of mod that combines the above and the two following offerings. Help me, please.

* *

Left VFO Right VFO
50.000-85.2x (with beep) 50.000-110.xxx (with beep)
85.2x-179.995 110.xxx-179.995
300.00-399.975
400.000-511.9875 400.000-511.9875
800.00-999.9875

* *

Receive Transmit
--- ---
50-135.995 (AM) VHF (NA)

136-179.995 " 136-179.995
300-399 (AM & FM) " (NA)
400-511.99 SUB-UHF 400-511.99

400-511.99 UHF 400-511.99
900-949.9875 " (NA)
50-179.995 (FM) SUB-VHF 136-179.995

The "CAP/MARS" mod

This doesn't cover as much room as the beyond MARS mod does, but may be more appropriate for those who use the CAP or MARS frequencies.

To mod (early model): remove D6 only.

To mod (late model): not known.

Yields RX 118-173.995, TX 142-151.995, RX 400-511.995, TX 425-454.995.

The "extended receive" mod

This is the mod that's usually given to hams to pacify them (the beyond MARS mod is closely guarded).

To mod: remove diode D5.

To use: press 'F' for one second and then pressing the Band button will switch the UHF VFO to a 800-999.995 MHz band and the VHF VFO to a 300-399.995 MHz band. The regular VHF VFO can now receive down to 50 Mhz.

The "cross-band repeat" mod

Allows you to... (WHAT!?!)

To mod: remove diode D4.

To use: press 'F' for one second, then '0'. Repeat to disable. The MHz dot will flash when in repeater mode.

Toggle CALL button function

Press SHIFT during power-up This is described in the manual, but the documentation is not complete. The TH-78A can operate in two modes: In SPLIT mode, non-standard offsets (i.e. split frequencies) are supported, but the default offset is not programmable. In SHIFT mode, non-standard offsets are not allowed, but the default offset is programmable. To select the default offset, press F for 1 second, then SHIFT. See p. 30 of the manual for details on changing the default offset.

Toggle CALL button function

Press CALL during power-up. The CALL button can operate in one of two modes. In the default mode (CALLSW), it switches between the call channel and the last memory channel (if in memory recall mode) or last frequency (if in VFO mode). After toggling the CALL button functionality (VMC), it will switch from the VFO to the last memory channel and then back to the CALL channel.

Observations on post-mod performance

Rich Garcia (n2czf@wt3v.nj.usa) observes "all original functions have maintained the same which is great. Aircraft band which was accessible before the mod remains with the same characteristics. It seems that VHF-High band has improved a bit on sensivity where it was dead as a dog before the mod (above 155.000MHz) but the 162.000 MHz band where weather radio is is still a bit deaf for reception at any distance but about 20 Miles. This depends on your (or my) terrain and transmitter output power.

"On UHF all public safety frequencies up to about 500 MHz seem to come in well but sensivity greatly drops from there (we really can't ask for more). Frequencies can be programed in up to the 920MHz ham band but I have no way of measuring sensivity. 800MHz works but the signals are very weak, you must be near the transmitter for reception. Assuming you are in the town or city where the transmissions originate it should work.

"Transmit is enabled up to and incl. 500MHz but after testing this on a frequency counter I find that a signal is only generated to about 490 MHz, even though the trans. LED shows output in the higher frequencies.

"Crossband repeat seems to work fine but the audio is unacceptable for use, BE AWARE the radio gets HOT! Prolonged use or use on a busy frequency would not be recommended. Also remember this is a dual band HT please use a proper antenna while in this mode to avoid a high SWR, we should all know better... Right?"

Someone else said:

"I found that marine weather reports at 162.40MHz in my area were received much better on the SUB-VHF band, than on the VHF band...

"If you are having problems with intermod, try switching bands (i.e. using the SUB-VHF band rather than the VHF band.)"

Cloning

The TH-78a's memory can be copied from one TH-78a to another TH-78a entirely through radio waves "over the air" (i.e. without cables or other special equipment). Theoretically, this could be done via repeaters, although I've never heard it done. Allegedly this requires a mod that includes removal of D5 or D6, but I haven't researched it.

Cloning is a real boon to groups that want a bunch of radios to contain the same memories, such as amateur radio clubs, search and rescue units, and people too lazy to program their radios. Of course, given that the ME-1

memory expansion unit has 250 memories, laziness is understandable :-)

(1) Set both radios to the same frequency.

(2) Activate both radios by pressing the '0' key while turning the power on. The radios will display the word "clone".

(3) Now, click the PTT button of the "master" radio. The radio will transmit in the economy low power mode. This may take about 4 minutes for fifty channels, or 20 minutes for the 250-memory ME-1. When the data has been transferred, both radios will revert back to their original frequency. (It is recommended that a dummy load be used to prevent unwanted interference.)

(4) Turn both radios off and then on again. The slave is now a mirror-image of the master radio.

Cellular Telephones

Cellular Phones operate at (tx) 824.040 - 848.970 (rx) 869.040 - 893.970, within reach of your modified TH-78a. The increments are, however, every 30kHz; the TH-78a will only increment in 25kHz steps at this frequency range, so the exact cellular frequency cannot be tuned in (most of the time).

Battery life on the TH-78A

wd6cmu@netcom.com (Eric Williams) says:

Some people have complained about the battery life on the TH-78A. I came up with these tips by checking out the power consumption under various configurations. In the case of power-saver mode, figuring out the average current with my DVM was impossible, so I ran the radio on a large capacitor and timed how long it took to die. These tips won't solve everything, but they might help.

The rig draws close to 2ma even with the power turned off, so don't leave the rig off with the battery installed for several days and expect full capacity to be maintained.

If you're only using one of the bands, shut down the other to extend your battery's life -- current consumption with the squelch closed is cut by almost a third.

If you're monitoring two frequencies on the same band, use the f2 button to receive both simultaneously rather than scanning between them -- the battery saver with two receivers will use about half the current of one receiver that is scanning.

You can make up a battery pack by putting nickel metal hydride AA cells in a BT-8 battery holder. A small strip of aluminum from the positive battery terminal to the depression in the top of the case will allow you to

recharge the pack inside the rig. This will give you 1000mah capacity without enlarging the size of the radio, and NiMH cells have no memory effect. (But they *are* expensive.)

Customizing the start-up message

William_A._Kirsanoff@smtpgty.anatcp.rockwell.com says:

Just in case you are doing a message write, don't pick slot '0', that would change your start-up message (default is "TH-78A", mine is "KD6MCI" :-)) You can then crack open the manual and read up on how these features work. I use the autodialer regularly. I don't have much use for the message memory other than the start-up trick though.

TH-78a loses the call channel CTCSS tone

George_Lin@mindlink.bc.ca says:
> Michael Sattler writes (regarding George's comments):
>
> Can you come up with an easy procedure for the readers of the guide
> to check whether their particular TH-78a loses the call channel tone?
> (I want to hear what you do, rather than make something up.)

Sure.

Go to the oscillator on the right (UHF oscillator). Select a UHF frequency on the VFO. Set the CTCSS tone frequency to some arbitrary number, say, 94.8 Hz. Turn on the CTCSS. Save the whole thing under the call channel for UHF. Select another UHF frequency. Select another CTCSS tone. Turn the subaudible tone on and save it under a spare memory channel. Go back to the call channel and check the tone frequency.

Stuff that didn't fit anywhere else

"I've had one report that the TH-78A is capable of in-band full duplex operation. I've been unable to repeat this on my unit, which only has the CAP/MARS mod perform. Confirmation of this feature would be appreciated."

Game Mode

ORIGIN: aviator@athena.mit.edu (who no longer exists), who credits james@brokaw.lcs.mit.edu for "much of this".

To enter the game mode press M and PTT during power-up. Be careful not to accidentally reset the memory, which happens with M + power-up. (Don't freak; you'll see the same "all screen items lit" when entering game mode as when you reset memory.) To exit the game mode at any time, press the LAMP key. The volume, lamp, or frequency settings can't be changed while in game mode.

The top part of the display will show "H.00", which represents the high score. The lower part shows a scrolling message, "PRESS ANY KEY". Pushing any key starts a "Follow Simon" type game. The display will briefly show one of the characters '1', '2', '3', or 'F'. Press the corresponding key. The game consists of repeating the displayed character sequence, which increases by one character each round.

After you "win" the Simon memory game by getting correctly entering a sequence of twenty characters, the next game is a draw poker game.

The way it works is that you choose your bet (from 1 to 10) by pressing '2' to increment the bet and '5' to decrement the bet. Then, press 'F' to deal the five cards. The face value of the cards is displayed, and the suits can be seen at any time by holding down the PTT key. Any number of cards may be discarded, and to select (or deselect) a card for discarding, press the keys '1', '2', '3', '4', or '5'. If a card is selected for discard, it is displayed "face-down".

Press 'F' again to draw new cards. Your new cards will be displayed, and then if your hand is 2-pair or better, the screen will show the rank of your hand on the left (2P for 2-pair, 4K for four-of-a-kind, etc.). On the right the pay-off for that hand will be displayed. Your bet is multiplied by the pay-off factor,and the resulting pile of cash is displayed in the right hand side of the upper screen. (The left-hand side of the upper screen contains your table stakes, which are initially 100 coins from winning the Simon game.)

If you win the poker hand, pressing any key steps into the next stage. If you lose the poker hand, your bet is deducted from your stakes and you are asked to start another poker hand. In the next stage, you are asked "TRYB/S" which means, "Do you want to try double-or-nothing in a guessing game for Big or Small cards?" Press 'F' for yes, press TONE for no. If you say no, your winnings are credited into your stakes and you are asked to start another poker hand. If you say yes, then a single shuffling/incrementing card is displayed on the left, and three stars are displayed on the right. You have to choose to go for either BIG or SMALL, by pressing '2' or '5'. You can keep pressing '2' and '5' to change your mind. When you are ready, you must try to hit the 'F' key to stop the rotating card display, and the card will show, and you will either win, lose, or draw. If you draw, you have to play big/small again, I think. If you lose, your winnings are gone and you can play poker again. If you win, your winnings double and you are asked whether you want to play big/small again.

The payoffs on the poker are set against you, odds-wise; the double-or-nothing game includes a draw, so the odds are against the player there unless you can time hitting the 'F' key to win more than half the rounds. I haven't managed to do this, so I don't know if there is anything beyond this, all I know is that when the table stakes are exhausted, you go back to playing Simon again.

ARRL Repeater Directory, $6.95. Lists by state and location within state the repeaters, who runs them, frequencies, offsets, capabilities, and whether open or not. Pocket size book, will fit in shirt pocket. Also covers 440 and some other frequencies (I only looked at 2M, so can't remember what else it has). Lots of info for a bargain price. Check your local ham store or mail order from AES or equivalent.

I wrote an article that appeared in the Feb. '93 issue of QST that tells exactly what you want to know. You shouldn't have any problem finding that issue at a library, but if you do then let me know and maybe I can mail a copy to you.

I also offer kits/PC boards for the interfaces described in the article. I'M NOT TRYING TO SELL YOU ANYTHING - the parts are readily available and ARRL has the PCB layouts.

Looks like we must have upgraded at the same time (AA8DX).

etjfonte@ci.ua.pt (J.FONTE) writes:
: Hello , tanks for reading ... Is there anyone who could explain me how
: do american ham see the difference on Callsigns ???
:
Jose,

In the USA, all ham callsigns start with A, K, N, or W. As far as I know, there is no meaning to the first character, they get assigned serially. US callsigns start with 1 or 2 letters, then a single digit. This can be 0 thru 9 and represents (usually) the region of the US where the licensee was issued his/her ham license. For example, 8 is Michigan and Ohio. Now, Alaska callsigns start with KA, Hawaii starts with KH, so in those types of cases there is meaning to the actual letters. Also, the 'quantity' of letters in a US callsign mean something (or at least traditionally). If I remember correctly, for example:

KA0ABC = Novice
KA0AB = Technician/General
K0ABC = Advanced
K0AB or KA0B = Amateur Extra

I think those are approximately correct, but I understand that as more and more hams apply for licenses, particularly Novice, Tech, and General, the FCC has borrowed callsign length conventions from other classes of ham licenses, so that now becomes less an indicator of the amateur class of the operator you are talking to. Also, as you move up to more advanced classes, you can get a new callsign, but probably for both convenience and sentimental reasons a lot of hams hang on to the callsign of their first license.

Hope this helps.

Mike

5275. Soundblaster vs Hamblaster

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-15 18:44:16 UTC
From: jwa@tellabs.com
Message-ID: <1993Dec15.184416.23040@tellab5.tellabs.com>
Source record: 273132

Over the past few weeks I received several e-mailings from
persons inquiring about the differances between the Soundblaster
and the Hamblaster.

The Soundblaster is a soundboard with circuitry that
performs A/D and D/A functions. It also has one or two
(depending on the model) FM audio synthesizer chips can
be used for speech synthesis. It even has a DSP chip that's
used for processing data for the MIDI and CD interface and
speech recognition (the 16 ASP only). The Soundblaster uses
a DMA (direct memory access) controller IC to access the PC's
RAM. A DMA channel provides high speed data aquisition for
sound sampling and display.

One drwaback is that the DSP is not really a signal processor.
It only processes the digital data from the MIDI and CD interface.
To conserve disk space the Soundblaster 16 and 16 ASP has an
advanced processor that performs sound compression but it can't
run complex filters or perform adaptive filtering.

The Soundblaster is great if your a musician or if you want to
play a CD through your PC. It's not very good in Ham Radio
applications where your trying to filter signals that are in
the noise or decode FSK.

The Hamblaster, on the other hand, uses a Texas Instruments
TMS320C25 digital signal processor. I has it's own program
memory that stores filter or modem programs. It runs the
programs in real time and is independant of the PC of the
PC memory.

Data can be transfered from the DSP to the PC via the I/O
port but only faster machines (like a 386-33 or 486-33) can
record sound. The I/O port is also used to load filter
or modem programs from a binary disk file to the DSP,s RAM.
The DSP can then run the program in it's own high speed memory.
The Hamblaster uses 35 ns RAM chips where a 486-33 normally
uses 80 ns rams.

The Hamblaster only samples 15 kHz. This may sound slow compared
to the Soundblasters 22 kHz rate but radio communications only
goes from 300 to 3kHz. You only need to sample twice the
maximum frequency. A slower sample rate gives you more processing
time.

Now that the pick-your-own-callsign era may be at hand, there is a lot of furious thinking about what new ones would be best for various reasons.

I am primarily interested in CW and contesting in both modes. I want to come up with some 3-land calls which might have the most impact.

All suggestions welcome and a bizarre prize will be concocted for the winning entry.

Tnx Bob WN3K FRC

The ARRL Handbook has short-form info on some transmitting tubes.
At least the basing diagrams and voltages and currents. The older
editions (up to the late 70's) have more info than the current ones.

Source record: 273357

Greetings...

I have seen the discussions relating to logging / QSLing software, and they have brought a question to my mind. I'm looking for a logging package that has to meet some very specific (and apparently unusual) requirements.

What I'm looking for is a system that will, upon my entering a call sign, interrogate my Yaesu CAT rig for the frequency and mode information, interrogate the QRZ! CD-ROM for name and address information, inquire of it's own database to recover information about previous contacts and notes that I made during those contacts and display all of this information on the screen. At the end of the QSO, I press a function key, and all of this information, including the date and time, is written to the database as a log entry, for QSL cards to be printed later, after the operating session. In this way, the computer takes over all the bookkeeping chores, and I get to enjoy the visit on the air.

Is anyone familiar with any of the available logging programs that even comes close? I'm far too lazy to want to log my HF contacts, so I'm obviously too lazy to try and write my own program (unless, of course, I have to in order to get what I want).

Please respond through the group, in that I can't imagine I'm the only ham that wants one of these.

73,

Alan, N7CEU

Eimac _used_ to have an excellent information package for amateur radio applications of their tubes, including data sheets, application notes, amplifier designs, and whole projects. I don't know if they still have it but if so, it'll be worthwhile contacting them. Their toll-free number is (800) 423-4622.

BTW, I got my package from them fifteen years ago. I just dropped in when I was driving up the Bayshore Freeway and saw the building (somewhat to my wife's annoyance, since we were on our honeymoon). I told them what I was after, and they were VERY friendly -- got all the literature, an engineering contact, and a short tour for good measure.

I'm still planning to do a conduction-cooled 2kw amplifier, just as soon as I find the time :-).

Just a quick question for someone who may be in the know..
I've been somewhat out of the hobby for the last few months since I'd returned to school to furthur my education, so when the notice went out, I didn't hear about it at all. I've been told that AEA is no longer producing Amateur Radio oriented products - is this fact or fiction? It it's true, does anyone know what the reasons behind this decision were, and who, if anyone, will continue product support for such things as the TNC's?

I have a Sr Falcon with a .60 size engine on it: total worth with radio
(used equipment being as it is) is around $250. I have carried in excess
of a pound of weight in it without hardly noticing. It is one that I use
for a 74 mile cross country race course, and load it up with about 30 fluid
ounces of fuel. On one race I simply strapped a pint can on the outside of
the fuselage. The last race ran us through a small hail storm which
punched about 20 holes in the top of the wing, but we didn't notice until
after landing it.

Anyway, a Sr. Telemaster, nice .60 size engine, and decent radio isn't any
more than a dual band mobil radio. The Telemaster will carry quite a bit,
and is relatively easy to fly. My masters thesis resulted in us designing
and building a 10 ft span, twin engine plane that weighed 35 lbs. It was
supposed to carry TV equipment and telemetry. But that was to be someone
else's project. We just designed, built, and flew the plane on a budget of
$4000. It can be done quite easily much cheaper with existing kits.
Brigham Young University has a crew with several planes that carry cameras

actuated from the ground. They do airborn geological and other types of surveys. One of their members gave our model club an hour and a half presentation at a club meeting one night.

The .60 size props are only $3-5.

Go for it, but get some flying help, or enlist an already RC flyer to help with your project.

Milt.

For CW, pick the shortest possible call that ends with a dash (since dits
are more likely to get lost in the noise). Also it should not end with
a K or anything that sounds like a prosign. If I were still in 3-land,
I'd go for something like NE3T or NE3A.

Well this is certainly news to me.. I just sent them back some of their software
I was testing for an article. They have recently sent out new catalogues
and have come out with many new products.. and even remember hearing
that they had bought out another company.

might want to check your source again

>
> what does the N or W or K mean ????

Well the US callsign zones work similarly to yours. There are 10
geographic zones 0 through 9. These zones aren't all the same size.
For example the 8 zone is the state of Ohio while the 4 zone is all
of the southeastern United States. Zones 1, 2, and 3, are in the
northeastern US, zone 5 is in the southwestern US, zone 6 is California,
zone 7 is the Pacific northwest, zone 9 Indiana and Illinois, and zone 0
is the central plains states. Hawaii is KH6 and Alaska is KL7.

Now the N, K, and W are prefixes assigned to the US, like EA is assigned
to Spain. We also have part of the A prefix block. In the beginning the
FCC assigned W calls, so a W4QO call would be a real oldtimer (That's an
inside joke, the FCC for a brief time allowed hams to pick their own calls
from the expired list and Jim got a good one). When they ran out of 1x2 W
calls, they went to 1x3 W calls, and when they ran out of those, they went
to 1x2 then 1x3 K calls such as K4NNN (Chuck's a friend who gave me my
Novice exam many years ago). Finally, when they ran out of the K calls
they went to 2x3 calls starting with WA, for example I used to hold WA4VJZ
when I was a General. There was a special WN call prefix for Novices,
for example my Novice call was WN4OAA.

That was all before 1968. After 1968's Incentive Licensing debacle,
things got weird. Extras got 2x1 calls, Advanced got 2x2 calls,
Generals, Techs, and Novices got 2x3 calls, and N and A call blocks
started being used. Now in many call zones we've run out of 2x1 calls
so Extras get 2x2 calls, and 2x2 is running out in some places, etc.
Plus, the FCC said we could keep our old calls when we moved to
another zone or changed license class. Originally if I moved from one
call zone to another I had to get a new call in my license class with
that zone number, but not anymore. So now someone with a 2 call could
live in the 4 zone, or someone with a 4 call could live in the 7 zone.

It's all very confusing.

Gary

Source record: 273373

Jeff, NH6IL asks about reading resistance values:

>I have questions concerning the following two precision resistors:

>1. Shallcross Akra-ohm wirewound type BX-100-J RB21B 13001F ABS

> Is the resistance 13000 ohms? (1300 * 10^1 is how I interpret 13001)
> What is the tolerance?

>2. Resistance Products Company LFB RB15AK 1R669F

> Is the resistance 1.669 ohms?
> What is the tolerance?

The value for the first resistor is 13,000 ohms 1%. The last "1" in the string indicates the number of trailing zeros. The two zeros preceding the last "1" are real numbers and could be any number from 0-9 and would be part of the resistance value.

For the second, the value is correct at 1.669 ohms 1%. The "R" represents the decimal point and all digits following the "R" are real numbers.

The letter "F" indicates a 1% tolerance.

As for the remainging letters and numbers, I've forgotten what all of that means, but believe they indicate case style, power rating and wirewound.

I find using a bb gun to be the most gratifying. Particularly if
the birds in question are loud and obnoxious and other flying objects
such as rocks, beer cans, and paint balls have failed to permanently
discourage them. ;-)

Many places sell phony owls and other predatory bird statues. In
most cases these acomplish at least *some* deterrence. I have heard a
garden hose strung around or near may be interpreted as a snake.
Fine nylon netting may be used that will not capture or injure
the birds, but they cannot fly through it and from a distance is
is practically invisible to humans.
Look for products in the garden dept. of a large hardware
or department store.

I don't really want to receive anything until the flight is complete.
I just want a motherboard, soundcard (with scsi port) and scsi-2 hard
drive hanging off the soundcard.

|>
|> In fact, why use packet at all? Why not send out a continuous telemetry

|> like that.

I think the full duplex setup is the way to go.

I like all this follow-up discussion.. it's precisely what I was looking for.

A minor tune-up: when I mentioned packet, I should have also mentioned RTTY
or any other non-networked data transmission protocol. I am only interested
in entering commands, such as to control an on-board scanner or to start and
stop digital audio recording, and seeing command-line type output back from
the computer aboard the craft. It doesn't have to be anything complicated.
Say upon request, report how much recording time is left on the hard drive.

Suppose I type "SCAN PRG 1 PRG 155.34 ENT DLY" to run a quick DOS program called
SCAN that would chat with, say, an HF-232 installed in a PRO-2005 and cause
the scanner to monitor one frequency. I could upload an ascii delimited listing
to the craft's computer and run a DOS program to parse the list and program
the scanner. Then send "SCAN SCAN" to start the scanner scanning. Then send
"VOX ON" for obvious reasons.

I'm waiting for the source code from someone who recently wrote a program that turns his SoundBlaster into a VOX recorder, a program I haven't been able to find in about four months.

When the craft is on the ground, I could park it in my yard, and send the craft a command to uuencode and dump the text (audio) to the base computer via radio. I would obviously use very low power to avoid tying up a frequency for long periods of time. How fast can ASCII text be sent via the different computer modes.. a straight comparison of different modes on 2m would be appreciated. Does the content of a data file being transmitted via legal amateur equipment constitute illegal use if it isn't exactly related to amateur radio? I wouldn't want to get into hot water because someone else might uudecode what I download, even if it is scanner audio.

I just don't want to have to work out an externally accessible diskette drive and monitor/keyboard port. Think of it as a computer with a wireless remote keyboard and monitor.

I mentioned to someone in private email that I would be interested in flying the craft (preferably a heli, but I hear they're really hard to fly) over a fire or crash scene and record the audio from the on scene units. Especially since low power xmissions don't propogate too far. I'd rather have a 20 foot antenna receiving data from a 500 foot transmitter instead of a huge, potentially offensive tower (or driving there.. stuff goes on all around me).

I would also like to see just what else I can't pick up from the ground. I want to hear ATIS, the tower, ground control and other airport stuff (I live about eight minutes from EWR Newark, NJ). Also, certain PD's in my area operate straight simplex. Their mobile units just don't make it to my house.

Even if the video doesn't work at first, anyone can make up a timer and tape a wire to an automatic camera and take beautiful shots from the sky.

I was also mainly interested in some type of computer mode transmissions to get around the 1 watt maximum PEP for r/c transmitters. If the computer could drive the flight control systems only for high-altitude maneuvering, then 2m carries a 1500 watt maximum PEP, right? Of course, we won't get silly and punch it up there, but it's good to know I could be pretty sure that even if I can't see the craft, it's still taking commands.

That's where the ssb tv interests come in. I have heard in private email that someone that someone knew has installed a small camera in the nose of his model plane so he could fly it by looking at a monitor in his van. With cameras becoming ever smaller, I could tuck one in the "cockpit" of the helicopter of the size I was imagining.

I've also heard about my size questions. I certainly didn't picture anything as big as what I've heard about. I pictured a helicopter about four to five feet long and two feet high. Perhaps a stronger engine than a chainsaw would be needed to get it off the ground. With a craft that big, I picture a baby AT motherboard up against one of the outside walls unless the bottom is wide enough to hold the board flat.

Again, this is preliminary by years..

Please, all your input is terrific. Does this sound fun to anyone yet??

One slight change. When a US amateur upgrades, he/she does NOT have to
change calls to the higher class. There are Extra Class licensees in
the KX9XXX series.

Where do those strange letter-number grid-square designations come from, and is there any way to convert a lattitude/longitude coordinate to the grid square? Is there a program to do this? I'll write one if there isn't.

This probably would be neat to link into a zipcode database.

NOTE: The Effective Sunspot Number for 14 DEC 93 is not available.
The Full Kp Indices for 14 DEC 93 are: 1+ 2- 1- 1+ 2- 2- 1o 1-

SYNOPSIS OF ACTIVITY

Solar activity was very low. All of the regions on the
disk were quiet and stable. A 16 degree filament near S02W41
disappeared sometime between 14/2329-15/1214Z. The eruption was
also visible in solar x-ray imagery.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly quiet levels
for the past 24 hours. A weak impulse was observed around
2047Z.

Geophysical activity forecast: the geomagnetic field is
expected to be active for the next 24 hours as a result of
coronal hole effects. Conditions should subside to mostly
unsettled leves for the second and third days.

Event probabilities 16 dec-18 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 16 dec-18 dec

A. Middle Latitudes
Active 35/30/15
Minor Storm 25/20/05
Major-Severe Storm 10/05/01

B. High Latitudes
Active 30/25/15
Minor Storm 35/25/05
Major-Severe Storm 15/10/01

Normal HF propagation conditions continued over the low
and middle latitude paths, while slightly below-normal
conditions persisted over the high and polar latitude paths
(mostly over the night sectors). Propagation over the high and
polar latitudes is expected to become more strongly degraded
over the next 24 to 48 hours due to effects from the
above-noted coronal hole disturbance. Middle latitudes may also
see minor signal degradation on night-sector paths. Conditions
should begin improving slowly by about 17 or 18 December.

5299. Review about dual-band radios.

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-16 05:08:39 UTC
From: segigot@students.wisc.EDU
Message-ID: <83359.segigot@students.wisc.edu>
Source record: 273228

I recently asked for comments about radios on this forum, and boy did I get them!! Here are the relavent parts about dual-banders:

I sincerely doubt you'll be able to find a dual bander for under $300. The only one I know of which has been advertised in that price range is the Alinco DJ-590. A friend of mine who has one has said that if you put a better antenna on it, it becomes a quite respectable radio. I would suggest trying to find someone who has one, and borrowing it for a few days. Or else, find a store which will let you return it if you don't like it.

The Icom (W2A) has quirks -- wierd batteries and charger connection mean Icom is the only source and they'll be expensive, oddball placement of the VHF volume/squelch knob next to the antenna which makes it hard to turn -- but overall I like it. The receiver seems as good as any other HT, it's physically small but not so small as to vanish or be hard to read, it doesn't look ugly, and wide-band receive works pretty well.

(3) MOTOROLA radios are in a class by themselves. They are indestructible. (I'm serious; I know people who have used them as weapons, *shattered the jaw of an assailant*, and still the radio was 100%. The problem is that you pay 2-3 times what any other radio company would charge. Mot is just not great amateur gear. Wonderful for public service.

Note--this doesn't have much to do with dual-banders, but it's a wonderful story!

(4) I love my FT-530 with the digital speaker mic. The IC-W2A is still gotta be one of the most sensitive radios on the market, great RX, wonderful, BUT -- no lit keypad, and a few other minuses. Friends who have the alinco dual-bander like it, as it's cheap and good.

Several of my pals have Alinco 580 HTs and really like them. Myself, I went with the Yaesu FT-530, afew bucks more, but I really wanted the dual in band receive and the voltmeter. No regrets.

Count me as one who likes his Alinco - a DJ580. It's easy to use, is easy on batteries, has a solid "feel" and has all the features I need (though some could be implemented better). If someone has experience with the older Alincos, they might have a different opinion.

Check around for used ones; I've seen them for as little as $275.

Check out the Radios Shack HT's. I know many folks who have them and they like them a lot. Seems they have a very tight front end which means you wont get intermod as bad as some of the others. Most dual band HT's are

pretty broad so you can expect lots (or at least some) interference.

This radio * is the only ham HT I have seen that approaches the durability of a Motorola HT. It is light-years a head of the W2A. I have a 24AT which uses the same batteries. Myself as well as every other person I know who has an Icom with those batteries has had a problem with the battery rails (plastic) cracking and falling off. :(

Note: *=Yaesu FT-23R

Alinco radios are not bad. I have two of their mobiles, a 570 and a 590, and I've found them excellent values. I don't own a DJ580, but several of my friends do. I haven't heard of any problems. I use the Yaesu FT470 as my handheld radio. I like the user interface very much, and it has a good thermal design, and an excellent battery saver circuit. However, I'd encourage you to *not* make a handheld your first radio. I think you'll find that a HT is less satisfactory than a mobile type rig for most applications.

These comments were taken from the 20 or so responses I got to the question, "Can anyone recommend a good HT to me?" The authors are, in order:

Mathew B. Cravit
Jacob DeGlopper
Scott Swanson
Jason Penn
Bruce Toback
Barry Rose
Steven M. Knapp
Gary Coffman

The "reviews" for single-band radios and the few comments I got about TNC's will come later. Just email me at: segigot@students.wisc.edu with comments or suggestions. I need to say a big "thank you" to everyone who wrote, for the help and the ability to brag about getting 17 email messages in 24 hours, all from total strangers :).

I have just one thing to say: please, please! no flames about this. I think we're all just about ashes now from the past few weeks, anyway. If there's a problem, email me.

Happy Holidays to everyone!

73,
Scott Gigot N9VOM
segigot@students.wisc.edu
We're working on the HT, now!

I'm sure there is, since every FBB BBS can calculate it for you. Look
for your nearest FBB board and check into it. Use the server commands
to find the right one. It will convert lat/lon to gs and meridians and
will reverse calculate same for you.

> Christmas present :-)

JVFAX with the op-amp interface is cheap shareware and works well.
SSC HF-FAX is a very polished performer.
They both work well but I found the the SSC offering was more convenient. The
JVFAX interface works with the SSC, but not the other way round. It also
works with Hamcomm (RTTY), which may be a consideration. Hamcomm is just so
damned pretty !

>
>uh oh, I knew I shouldn't have said 'packet'.

It's good that you did! When we hams think of digital communications, we tend to forget that there are other modes, and that there are reasons for selecting specific protocols. The books don't say much about this kind of stuff (well, not the ham radio books, anywho).

>|> But the gutted laptop probably wouldn't tolerate the vibration inherent
>|> in the aircraft.
>
>why not? even with absorbing mounts? I've seen some pretty high shock
>absorbtion figures for hard drives of late.

Yeah, I know. But think about all those solder joints, all done to consumer-electronics specs... ...ugh.

Really, the vibration is awful. And the mounts tend to absorb more shock than vibration.

I'd look to the commercial world, to some simple process-control computers used for embedded systems (help me out, some of you control-systems designers!). There are small computers that are designed for dedicated applications in hostile environments. You could load up the RAM and then leave the disk drives on the ground, or even embed control program in non-volatile memory. Considering that the hard drive is three times the weight of a good-sized control computer...

>
>I don't really want to receive anything until the flight is complete.
>I just want a motherboard, soundcard (with scsi port) and scsi-2 hard
>drive hanging off the soundcard.

Hey, if you insist... ...but (tempt tempt) wouldn't it be interesting to be recording and processing telemetry on the ground while someone else flew the airplane? (Hey, Joe, that was a 6G turn!).

In the event of a failed mission (or the unlikely event of a water landing), you'd have data right up until time of death.

>I just don't want to have to work out an externally accessible diskette drive
>and monitor/keyboard port. Think of it as a computer with a wireless remote
>keyboard and monitor.

Ah! Here's where knowledge of how R/C aircraft are constructed actually would help. ALL of them have big access hatches (usually the wing unbolts) to get at the radio. The charging connections and such are frequently inside. So could be your serial port.

Again, go for a simple computer that talks, either via a radio link or via a serial cable, to another, more sophisticated computer.

Bear in mind, when you think about flying it anywhere, that you have a liability problem. You can't fly R/C, and be insured, except at an AMA sanctioned field. That means no coverage of news events. Your altitude is also limited by FAA regs, so you can't foul up air traffic. By the way, people have been sued for millions after their airplane whacked someone, so this is not trivial matter.

>
>Even if the video doesn't work at first, anyone can make up a timer and
>tape a wire to an automatic camera and take beautiful shots from the sky.

ATV from R/C airplanes has been a popular activity for a while.

>I was also mainly interested in some type of computer mode transmissions
>to get around the 1 watt maximum PEP for r/c transmitters.

I'd hope that if you're a ham you'd make use of your license and use the 50Mhz band.

Hello out there,

I write this messages, because i need a chrismas present fort my
sister. She is collecting postcards from all countries on earth.
But now the post is getting smaller, no one wants to write her,
it is only a few words and she would be happy.

Now she is in the 10th class , so she doesn't have an internet
account.

I ask you to send my postcards to make a great present.

My address is:
Torsten Fechner
Heilikastr. 21
94034 Passau
Germany

If you be a amateur radio operator and if you have a packwet radio
station, please let me know; I will answer your postcard via PR
(don't forget to tellme your homebbs inclusive the hole header)

so long and many thanks

In article <1993Dec15.183758.28248@news.csuohio.edu> mike@garfield.csuohio.edu (mike mayer) writes:
> KA0ABC = Novice
> KA0AB = Technician/General
> K0ABC = Advanced
> K0AB or KA0B = Amateur Extra

I remember it being broken into 4 groups:

Class A: 1x2 and 2x1 (eg, W1AA or WA1A)
Class B: 2x2 (eg, WA1AA)
Class C: 1x3 (eg, W1AAA)
Class D: 2x3 (eg, WA1AAA)

Novices get class Ds, Techs and Generals get class Cs, Advanced get class Bs, and Extras get class As -- IF available for that area. If not, a call in the next group "down" is issued; e.g, if I pass my Technician exam in area 9, if N9ZZZ has already been issued (and thus they are out of class C calls), I will be issued the next class D call -- probably something like KD9MNP. QST publishes what the "recent" callsigns in each class have been, including if any groups are full (class C is full in most areas at this point, if I remember correctly).

Sorry if I'm being an FAQ-echo,
Scott

I haven't tried it myself, but I have heard that the fake owls placed in the vicinity of the antenna are effective in alleviating the "bird on the wire" problem :-)

Hello Lee , You have the same problem that I had months ago...
I don't know many loggers but I used some like :

- K1EA CT. (this for contesting ... excelent)
- SWISSLOG (also very good w/propagation charts ...but not user friendly)
- SWISSLOG CT. (for contesting....)

At the moment I'm using TOPLOG (from I4UFH) , it's an excelent logger...
it gives you your results for Awards (WPX,DXCC,IOTA,WAS,WAZ,counties,OBLAST...)
And the best thing is that the program is free . IF you want it send $3 (USd.)
to I4UFH and we will send the program (the software is maybe available in a
local HAM BBS)...

73's and good DXing.....CT1ENQ (sk)

From: wjc@ll.mit.edu
Message-ID: <1993Dec16.174245.20972@ll.mit.edu>
Source record: 273270

I am trying to find an adapter to connect a Larsen whip to the 3/8"-24 hole on a standard car swivel mount. Something which has a 3/8"-24 thread on one end and a 0.100" hole with a set screw on the other would do it. Even better would be something threaded 3/8"-24 on one end and 5/16"-24 (standard Larsen thread for antenna cones and springs) on the other.

I'll probably just make my own adapter in the machine shop, but I'm amazed that no company seems to manufacture such a device. Does anyone know of a source?

A question for all you techno-whizzes out there: When measuring
the SWR with (guess what) an SWR meter, is it really crucial to place the
meter between the feed line and the antenna, or can you put it between the
transmitter and the feed line? Would the latter yield spurious readings?
Thanks for the help, and Merry Christmas!

I've heard of some of the audio bird repellers, I found them to be
kind of annoying. A guy around here hung an owl decoy from his antenna.
It was one of the cheap semi inflatable kite type and it worked very well.

It depends on just what you want to measure.

If you want to trim your antenna to be exactly 50+0j ohms at your frequency of interest, then you have to measure the SWR between the feed line and the antenna. If you just want to know what mismatch your transmitter is seeing, without any intention of doing anything about it, you must put it between the transmitter and the feedline (because the SWR measured there will be lower than what is seen at the antenna, due to feedline losses). If you want to just adjust your transmatch for a 50+0j ohm load at the transmitter terminals, then you have to put it between the transmitter and the transmatch. Note that in this last case, a 50 ohm SWR bridge between the transmatch and antenna will not read 1:1 in the matched case, though it may change what it reads as you tune: being designed to work with 50+0j impedances, it will (in fact) not be accurate when neither the source nor the load is 50 ohms. Yes, it's still connected to 50 ohm coax on both sides, but since the other end of both coaxes is misterminated (the antenna on one, the output end of the transmatch at the other), the load seen is not 50 ohms.

Note that you can make good use of most SWR meters by placing them after the transmatch (but still in the shack :-) : since most SWR meters will also act as simple forward power meters, you can simply adjust your transmatch for maximum forward power (which is the situation that you want). Note that with a high SWR it will tell you the power is higher than what your transmitter claims to be putting out, sometimes substantially higher. That's because much (or most) of that power is being reflected right back down the feedline by the mismatched terminating impedance, only to be sent right back by the conjugate match at the transmatch.

Get _Reflections_ by Walt Maxwell (published by the ARRL).

I have had some experience as a commercial two-way radio tech, and as
a result have recently been "suckered" into helping a friend fix his
Genie Garage Door Opener. If you are at all knowledgable about these
things, could you PLEASE be filled with Christmas Spirit and help
a guy, whos helping another guy???? :-)))
Here are some of the questions I have:
(by the way,....the mech. portion of the door opener is working fine)

*The receiver is a model "AR-75" and also states a freq. of "310"
Does this mean that the transmitter and receiver operate on 310.000Mhz.,
or just within this general freq. band???

*This is an older system that uses a plastic "code key" that allows small
jumpers or fingers to make contact with ground. How does changing this
code effect the carrier? Is the freq. pulse modulated or other?

*What is the best method to align the transmitters with the receiver?
(I do have access to an FM service monitor, freq. counter, wattmeter, etc.)

ANY help or suggestions you might have would be VERY MUCH APPRECIATED,
and might even get you on my "Christmas List"!!! :-)

Please email "jeffl@pmafire.inel.gov"

Thanks again and Happy Holidays!
Jeff

The Sad Tale of a Musical Oscillator, Or how I'll spend my Xmas vacation

Well, what that silly first line was meant to allude to was the fact that
I have a chirping, whooping, and generally being anything but, stable
oscillator.

As CW is my preferred form of rf emission this chirping oscillator just
won't cut it.

Here are the specifics.

The rig is a TEN-TEC pm2 (early 70's qrp rig) It's a direct conversion
style transceiver. "The oscillator used for receiving operates directly at
the frequency being received. This allows the same oscillator to be used for
transmitting. When the XTAL/VFO switch is placed in the VFO position,
it connects the receiving oscillator output in place of the crystal."

This is a fairly crude design in my opinion.The DPDT switch has single
conductor hookup wire going from the switch to the board (six of them)
about 2.5 inches long. The switch selects between 80m and 40m lc circuits
which feed the base of the bipolar transistor, the oscillator.
The oscillator is followed by a buffer and then the XTAL/VFO switch.
After the XTAL/VFO switch is the driver stage and the final.

That's it on the radio

Soooo, what how about suggestions on improving the stability of the
oscillator. By the way there is no shielding around the transistor section
of the oscillator, the inductor is in a metal can but that's it.

Any suggestions would be appreciated. I am going camping down into Mexico
and want to use my new (to me) VFO capable radio as opposed to my MXM
rock bound QRP rig.

Thanks in advance.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

A friend recently purchased an Icom R-7100. It is a very nice unit and they have purchased the Icom CT-17 option which allows communication between the computers serial port (in this case com-2) and the radios CI-V interface. The problem is that the Icom documentation included with the radio and the CT-17 does not offer the best information as to how to use this interface to it's fullest capabilitys. They offer several programs which are written in Basic that will preform basic functions, but the programs appear to be poorly commented and will require modification to run on their particular version of Basic.

I have located several programs which appear to be able to drive this radio namely Autolog4 and Icom.c. But, these programs are specifically designed with transcievers in mind. Does anyone have any knowledge of a good program that will exercise all the capabilities of this radio? If so please eMail me some info. You can even UUencode the program and eMail it to me if you have one. My friend is an Extra Class ham, but not a computer guru. So something to the point would be far more enjoyable for them. Certainly someone has gone to the trouble to write a Windows application for this purpose??? Please eMail any comments if possible so I'll be sure not to miss them.

Thanks in advance,

N4IFC

From: hajjar@cg-atla.UUCP
Message-ID: <10487@cg-atla.UUCP>
Source record: 273129

About a year ago I installed a 2K SSB filter in my Yaesu FT990.
I've found that the 2K filter is a shade better than the 2.4K SSB
filter that comes with the unit.

A year ago I sent the 2K filter back to Yaesu and they replaced
the crystal but I found no improvement.

A friend of mine also has a 2K filter in his 990 and he also
finds it practically useless and also views the 2K filter as
a waste of money..

I thought I'd share my experience with the 2K filter in case any
one on the net was thinking of purchasing one.

Are there any 990 owners out there who are happy with the 2K filter ?

A side note, the 2K filter in the FT1000 works great. Yaesu said
the 2K filter works like a 1.8K filter because it is cascaded.

If the feedline were lossless, it wouldn't matter at which end of the
feedline you insert the SWR meter. With a lossy feedline, you will measure
a lower SWR at the transmitter end than at the antenna end.

However, if you only need a relative reading (e.g. you are trimming the
antenna for lowest SWR), you can put the SWR meter at either end:
the "dip" in reading will occur under the same conditions. (But the dip
will be lower and broader at the transmitter end.)

5326. Where are all the young enthusiasts?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-16 23:10:46 UTC
From: drew@trl.oz.au
Message-ID: <drew.95.0@trl.oz.au>
Source record: 273246

Is there no longer any "magic" in radio for young persons? At my radio club, I see the same bunch of (mostly) grey and balding heads- rare to see a young, enthusiastic person attend a meeting. And on the air- same bunch of grey beards- not many young voices.

Let me quote a paragraph from "Most Secret War" by Prof. R.V.Jones, of Scientific Intelligence fame;

"My main hobby in my schooldays was, as with many other boys of my generation, the making of radio receiving sets. There has never been anything comparable in any other period of history to the impact of radio on the ordinary individual in the 1920's. It was the product of some of the most imaginative developments that have ever occurred in physics, and was as near magic as anyone could conceive, in that with a few mainly home-made components, simply connected together one could conjure speech and music out of the air. The construction of radio receivers was just within the competence of the average man, and could thus write himself a passport to countries he could never hope to visit. And he could always make modifications that might improve his aerial or his receiver, and give him something to boast about to his friends...".

Young persons now are surrounded by global TV, cellular phones, computers with exciting games.... Is it surprising that building radios offers little prospect of any real fun?

Can we do anyhing? Should we try to do anything? Will our cherished hobby simply fade away and die? Clues anyone?

73, Kind Regards,

Drew, VK3XU. Telecom Australia Research Laboratories.

> Thanks for the help, and Merry Christmas!

Well that depends on why you're doing the SWR measurement, and how well
you know the characteristics of your line. If you know your particular
line characteristics, you can make the measurement *anywhere* that's
convienent and use the Smith Chart, or the formulas in the Antenna Book
to determine what complex impedance appears at any point in the system.

If you don't know the characteristics of the line, then you can't determine
the "real" SWR on the line anyway, but by measuring at the antenna, with
suitable precautions to avoid near field effects, you can determine the
mismatch magnitude at the antenna, but not it's precise complex nature or
absolute sign without further measurements. For most uses of the "will my
transmitter like this?" nature, measuring at the transmitter end will be
all that's necessary.

: the SWR with (guess what) an SWR meter, is it really crucial to place the
: meter between the feed line and the antenna, or can you put it between the
: transmitter and the feed line? Would the latter yield spurious readings?

An SWR meter will give you an accurate indication of SWR on a line
of the impedance for which the meter is calibrated (designed), wherever
you put it in that line, assuming that the meter itself is accurate.
The SWR on the line will be different at different points along the line
because of loss in the line, and possibly because of internal reflections
in the line (e.g., if the line is damaged). It is important to note
that the meter you use knows nothing about the line its connected to
except the current and voltage at the point where it's connected--that
is, if you hook it to a line that's a different impedance than the
meter is calibrated for, you will get wrong readings.

If the meter is appropriate for the line you are using and you want
to match the antenna to the line, you will get the most accurate
readings by putting the meter at the antenna end. That's because
you measure all the reflected power, not attenuated by a length of
line, and you measure only the forward power that actually reaches
the antenna, not the full xmtr output unattenuated by the line. But
if it's more convenient, you can start your measurements at the
transmitter end. If you get that end to 1:1, then the other end will
be 1:1 also. Double-check if you wish when you are satisfied with that
by putting the meter at the antenna. But of course if it's up 150
feet in the air, this isn't very practical...

If you know the line loss, you can predict the SWR at the opposite
end knowing the SWR at one end. If your transmitter doesn't complain
too much, you can measure the line loss by opening (or shorting) one
end and measuring the SWR at the other end, and use the same formula
rearranged, since you know the SWR at the open (or shorted) end is
infinity:1. It doesn't take a whole lot of line loss to make the
SWR quite a bit "better".

CONFIDENCE LEVEL: 70%
```

NOTES:
Predicted geomagnetic activity is based heavily on recurrent phenomena. Transient energetic solar events cannot be predicted reliably over periods in excess of several days. Hence, there may be some deviations from the predictions due to the unpredictable transient solar component.

Do what I did; try to play with the cutting edge where no one else (or at least not great numbers of "someone elses") play; digital communication in the 902-928MHz ISM band. This is fun stuff. It's so short range I can't really step on important communications, and it gives me design and construction experience for those higher bands, like the 5GHz ISM band. You can't use 28MHz construction techniquest at 5GHz, or you'll just get a space heater.

I guess that because there are fewer of us young ones around nowadays, there is a statistical decline in the number of motivated ones. It's the 100th monkey theorem a lot of times; 1 starts washing its food, soon 10 do, then over a period of time, the numbers gradually increase to about 100 doing this in a colony of 5000. Then, suddenly, they all start doing it.

Now, 100 is a random number picked for illustrative purposes, but you get the idea.

In an age where the 100th monkey is watching Beavis and Butthead, is it much wonder why us geeky types concentrate on the neato stuff?

Another argument is that it takes a lot of discipline and curiosity to get yourself up on the tech curve, so you better start young. Nowadays many children are weaned on the front of the TV's picture tube, not on the ideas that drive it or the circuits that empower it.

I have a Kraco 23-channel single sideband base station CB, model KB-2355. The manufacture date is June, 1976. The radio works fine, and I just put an Antron 99 with it, so it works that much better. However, meters tell me that, while the match is 1:1 across the frequency spectrum, it's not putting out the full 4 watts AM and 12 PEP sideband. Could someone tell me how to peak this radio up so I can get maximum output on it? If possible, please supply information on peaking tx power, tx modulation and rx sens-itivity. Any information on how to get this radio to perform to optimum capacity would be appreciated. Please respond in mail rather than posting.

Grey hair vs. youth? Well, that's just the way life deals it now, eh?
But seriously, amateur radio operators just find a hard time matching
the "excitement" that modern technology offers. Yes--there's a lot of
excitement in new radio developments--and in fact, I personally have
found learning about ham radio/theories/etc. quite stimulating. What
originally drew you to hamming? Building radios? Well, it is now
that radios are so common that a person can get one free if he looked
hard enough. Today's youth is involved and interested in fun--
and the youth is entranced by media. With all of technology sucking
interest from practical electric theory (which some people hate
anyway) to learning how to do stuff like navigate the internet :)
how much surprise is there really? 3/4 of my friends look at me
and say, "huh?" when I say I'm learing morse code and studying for
the exam. Most of us don't have any clue that the hobby even exists.
Those who get involved also find that the equipment that can pretty
much be used just for hamming is expensive--on the other hand, computers
are quite multi-functional.

Amateur radio has to be "advertized" and glamorized for the youth
to take notice--but really, how much involvement can anything really
expect in today's busy society?

--jesse
(still a youth, not YET licensed, but working on it)

btw, even at the amateur radio club at my university,there are
perhaps 50 operators with keys to the shack--not too much for a
school with > 5000 undergrads and who-knows-how-many-more grads.
But at least the school has facilities!!!

For those of you who aren't in the Purdue area, I'd like to comment on John
Dormer's apt. and the equipment therein.

His apt. qualifies as the proverbial "geek"'s residence.

But hey, watching all those flashing lights and listening to the hum of the
power supplies, now tha was one of the primary motivations for me to get a
ham radio license.

The other motivation is the Kenwood TS820S that my greatuncle is giving me
once I get my General Class license.

:)

It seems (especially on the net) the ham is a older man's hobby. A lot of hams have a reputation of sitting around at club meetings talking about the set-up they have at home. The local meeting I did goto was a talk about one of the members antenna systems he had 15 years ago. It was somewhat interesting, but I don't see that exciting to many young people to join.

The main reasons the ham may be losing popularity with young people is
1. The excitement of talking to people from different areas and foreign countries can now be done via a home computer (much many households have anyways).
2. More people live in cities now. What is worse, more people live in apartments. Not many people can set-up fancy rigs with huge antennas in an apartment building (I have asked :-). This limits people to the hand-held jobbies, that most newbies will get from Radio Shack (so that is only 2-Meter band and 440MHz I think).

Things that will help is when you can buy a multi-band hand-held radio for a fairly good price. And maybe when packet-radio and SSTV catch on more ham will re-gain popularity.

Now a disclaimer. I a newbie myself. I still studying for a tech license next month. I plan to get a 2-Meter hand-held and just use local repeater. I'm really more interested in short-wave radio, which seems to offer more to people that are stuck in apartments like me.

Since I'm a newbie, I probably have NO IDEA what I'm talking about, I'm just making observations. Please take it as such.

>a K or anything that sounds like a prosign. If I were still in 3-land,
>I'd go for something like NE3T or NE3A.

I'd beg to differ a bit on this one; I ran FD this year as N5TM, and I found myself getting beaten out by folks with longer calls who were the last ones replying to a CQ. This factor wasn't nearly so bad when I've operated with my own call.

The "audio annoyer" I've got in the barn works well. Maybe a little too well as I also find it very annoying. I had bought others previously that I couldn't hear, but they did nothing to get rid of the rats and birds. Maybe the emperor had no clothes?

5341. Re: Where are all the young enthusiasts?

Speaking only for myself....

I'm 20. Is that young enough to fit in with the "young enthusiast" that you find lacking? Certainly it is at my home club, and even tends to be so at my (defunct but reforming) university club, where I am the only undergrad who attended the restructuring meeting.

So why did I pick up my ticket? What's in it for me, especially since I have internet at my disposal (the ultimate communications tool of this age, IMHO)? Well:

(1) Emergency service. Maybe I'm weird, but I *like* public service, and the concept of being useful in a bona fide emergency really gives me a sense of -- well, pride and worth (not to be too corny or anything ;)

(2) Another place to meet interesting people. Some of the guys (and gals, though they are few and far between) that I've met thru the hobby are *really* neat and interesting, and I love the interactions I have with them. I'm fairly certain I wouldn't have met many of those people if I hadn't gotten into radio.

(3) My childhood. I remember taking electronic lessons when I was 10 or so from an experienced ham, and watching in awe as he would paddle out these DX contacts and teach me how to build these simple receivers... that and he'd built all this equipment *himself*, and was using it to talk to people from all over the place. (He did scare me off from the code; I never could get it down as fast as he was doing it. Years later, however, I learned that he was operating at 30-45 wpm, and was giving me code examples at 20....) It was so neat! In fact, one of the most depressing things to me currently about the hobby is that if you took my HT and smashed it on the sidewalk, I'd have no *clue* about how to go about repairing it besides sending it to Yaesu.

(4) Digital mode research. I set my packet station up in our AI lab one day this semester. Within a week I had email from 2 professors wanting to talk about different possible applications of digital mode. Now, part of amateur radio is exploring and running with these kind of experimental ideas, right? So, there's another draw.

The only problem for me is that I can think of counters to almost every one of these points, especially (1) and (4). So perhaps it's not for everyone? But there's a core of people who I think can be drawn into the hobby. I still see that spark of wonder on

the faces of sophomores at my old high school when the ham club advisor draws out his shortwave, throws a piece of wire over a table as an antenna, and tunes in the BBC World Service, or Radio Moscow. DXing is still an amazing concept, digital mode has incredible potential, and there will always be the type of person who wants to volunteer for local events, or work with RACES or EMA, or whatever. I personally am trying to do my part to expand the hobby (the web page and looking into these professors' ideas), although in the end it's doubtful that I can really make that much of a difference.

Sorry to evangelize on my soapbox. I just wanted to speak up as one "young ham" who will try to keep the spirit of amateur radio alive as best he can.

Hello all,

I have a friend who is interested in modifying his Kenwood TH-78a to receive and transmit beyond 496Mhz (on the 440 band), which is where the radio stops when the diode mods are completed (please no replys about this being illegal, etc.).

He is pretty certain that the VCO will need to be re-aligned and cannot determine from the service manual how this is done. Anyone who has completed this mod (or attempted with, or without, success) please reply directly to me at asplund@aludra.usc.edu.

Any help would be appreciated! Thanks in advance!

I don't think it's a weird feeling at all. I also like the idea to be useful one way or the other. Even if it may be a stronger feeling here, where we are only 20.000 hams...

: (2) Another place to meet interesting people. Some of the guys (and
: gals, though they are few and far between) that I've met thru
: the hobby are *really* neat and interesting, and I love the

Right. There seems to be (I'm still waiting for my ticket !) a real nice ambiance. Mostly because everybody trusts everybody. You know the people you are facing.

(3) Teaching other people electronics basics. Being a Ph-D student in electronics, I have always been interested in HF. It seems magical, beyond all the Maxwell equations. It doesn't work, you put your finger on the transistor X, and it works, and then it stops again ; it doesn't oscillate on the proper frequency... BF is a bit boring. HF is real fun.

The sole problem I encounter here is the cost of the hobby. HF rigs are still very expensive, unless you make your owns. And what can a poor student buy ? Second hand material ? (A good HF TX would cost over $3000)

I have come to the hobby because electronics is really something I *love* and HF overall. I must almost admit that I was more interested by the possibility of building my own rigs than chatting on the air, though it's a cheap and sympathic way to enjoy evenings and nights. There is a whole new world to explore above the GHz limit, new antennae to design, new devices to use, and that bandwith... Traditionnal HF is technically dead (more or less, everything is known) but still wonderful for DXing, whereas the SHF range is virtually unexplored and really promising. I think we, as new young hams, have both to perpertuate the tradition, and to pioneer what the future of radio will be "To boldly go where no man has gone before".

Now, I can seem a bit enthusiastic, and I apologize. I really can't wait for my ticket.

Vince. (almost 3 weeks and counting - F1J... or F1K...)

5347. Baycom Help Please

Hi to all you Baycom/Packet Radio Experts!,

I am new to amateur radio and have decided to have a go at packet radio. Unfortunately I have run into some problems.

I am having trouble connecting to my local packet node (STRD21) in Stroud, Gloucestershire, England. When I do actually manage to connect the link seems very poor (ie dead slow to respond and unreliable). I feel that if I knew what the codes appearing in the Baycom monitor window meant, I would be better placed to sort out the problem.

A typical line appearing would be :

R0 STRD21>G7RKC RR0,F

It's the last bit of the lines (ie RR0,F) that confuse me. Obviously there are many other codes appearing.

Does anybody have lists of what these codes mean. I would be very grateful if someone could help. Other general advice would also be most welcome.

Thanking you all in anticipation!

Andy Hall

SB DX ARL ARLD069
ARLD069 DX news

Thanks to Tedd, KB8NW; Don, KJ6TC/9K2WR and the Ohio/Penn and Yankee Clipper Contest Club PacketCluster Networks for the items in this week's bulletin.

WALVIS BAY. Ian, ZS9A, has been on 21335 kHz SSB with a DX Net group at 1400z, and 21087 kHz RTTY around 1545z. He also sneaks up onto 10 meters from time to time. The possibility of South Africa turning control of Walvis over to Namibia could have some affect on the DXCC status of ZS9. Smart money says to work this one now if you haven't already.

GHANA. Peter, XT2BW, is scheduled to leave Burkina Faso at the end of January. He will vacation for two or three months in Ghana with his family. Of course he plans to apply for a license and hopes to be active. QSL via WB2YQH.

PACIFIC ISLAND HOPPING. Akio, JA3JM, will be on a Pacific DXpedition during late December and early January. Plans are for CW, SSB and RTTY on 160 through 10 meters and OSCAR 13. The schedule is December 20 through 23 from American Samoa as AA5K/AH8, December 24 through 30 from Niue as ZK2XJ, December 31 through January 2 from the Southern Cooks as ZK1AJM, and January 2 through 5 from Western Samoa as 5W1AS. QSL all contacts via JA3JM.

MALDIVE ISLANDS. Carlo, I4ALU, will sign 8Q7BX from December 26 to January 6. Activity will be CW only on 80 through 10 meters.

NAURU. Mine, JA2NQG, will solo as C21/AH0F from December 28 through January 3. He will concentrate on 160, 80 and 40 meter CW. QSL via JA2NQG.

SVALBARD. Lars, LA5EBA, plans a six month operation as JW5EBA starting in mid January. His tour of duty will be working at a

meteorological station on Hopen Island.

NEPAL. 9N1HP was recently active on 7008 kHz from 1200 to 1230z. The operator was JA1OEM.

THE WAIT FOR KUWAIT. Don, KJ6TC, reports that after a year and a half of waiting he has finally received the logs for his 9K2WR operation. Processing of QSLs will be DX first, then US, and finally bureau cards.

Gary:

In general this may be correct, but god forbid, I am going to come to Mendelsohn's defense. He does NOT appoint yes men EXCLUSIVELY to his cabinet. Phil Karn and I were both asked to be on his cabinet and Karn actually served in some places. Now Phil and I had been a thorn in Steve's side before and he had no reason to believe that we would `behave' in these meetings. I did not serve, primarily because I wasn't in Hudson, I am in Atlantic. Mendelsohn, whether you like or hate him, does NOT choose exclusively yes men for his cabinet.

I would very much like to see a new newsgroup: rec.radio.amateur.propagation.
Am I the only one ? To me the newly created newsgroups .antenna, .equipment
etc. are doing very well. The point is that the new groups create more
discussion on these areas. Atleast I think so. Another thing is that it is
much more convenient to read these groups since they are not loaded with
stuff you are not interested. Or is there a propagation newsgroup I
haven't found yet ?

I'm 24. I just recently celebrated the 9th anniversary of getting my license in the mail. I was always inclined to experiment with electronics, and I had my shortwave when I was 12, but...

Getting into ham radio has charted a great deal of my professional career to date. All through college (elec. engr.), I took a great interest in the study and solution of Maxwell's equations. E-M waves baffled most people. I could tell them that it really wasn't "magic" - OK, it kind of is - but that it's a part of everyday life that I could literally get my hands on and play with. I took communications theory classes when I could, and even an antenna theory course.

But what was REALLY neat was that I could go over to the radio club and play with RF - and talk all over the world. HANDS ON EXPERIENCE - the kind that wasn't taught in class.

I'm a CW addict and a DXaholic - and loving every minute. Run 5 watts off my car battery on Field Day; try QRPing because 100 watts is just too easy; work a repeater 300 miles away from my dorm room on 2 meter sporadic E with a 1/4 wave vertical on the windowsill; give an exam at least once a month; fix my own stuff if I can get the schematics; track the receive frequency of a DX station working split, and call for about an hour - and finally GET it!

If I just wanted to talk I'd use the phone or send e-mail.

The ARRL Letter
Vol. 12, No. 23
December 14, 1993
FCC proposes choice of call sign
The FCC on December 13 proposed that amateurs be able to choose their own call signs, once a new automated processing system is in place at the Commission's Private Radio Bureau.
Under the proposed system, amateurs wishing to apply for an available call sign would be required to file a form and pay a fee.
Trustees of club and military recreation stations also would be eligible for the new program. The FCC cancelled a rule it adopted last summer establishing a call sign administrator program for amateur club and military stations, a program that was never implemented.
The FCC said that at the present time call sign selection by new licensees was not feasible, but left the door open for that possibility in the future.
The FCC said that the new PRB computer might eventually allow amateurs to check for themselves the availabilty of call signs, and that the new system might be used to allow electronic filing of applications, making the process easier for applicant and FCC alike.
At the meeting today, the first under new FCC Chairman Reed Hundt, Private Radio Bureau staff began by telling the FCC commissioners that recent Nobel Prize winners Joseph Taylor and Russell Hulse had begun their scientific education as radio amateurs.
The "vanity" call sign plan was unanimously approved by the four FCC commissioners. The text of the Notice of Proposed Rule Making is expected to be issued shortly.
222 MHz: Novices get more, weak-signal band OK'd
The FCC has acted to expand privileges for Novice class licensees on the 222-MHz band as well as to create a subband for "weak signal" work on that band. The changes approved by the FCC in a Report and Order released December 2, 1993, were first proposed in an FCC Notice of Proposed Rule Making in November, 1992 (PR Docket 92-289) in response to petitions for rule making from the ARRL. The effective date for the new rules is February 1, 1994.
Expanded novice privileges

The new rules authorize Novice operation in the entire 222-225 MHz (1.25 meter) band. Novices currently have access to 222.10-223.91 MHz, an allocation created in the 1987 "Novice Enhancement" proceeding. At that time the League sought full access for Novices to the (then) 220-225 MHz band. The FCC's 1987 Report and Order, however, limited Novices to 222.10-223.91 MHz.

In support of its latest proposal to the FCC, the League said expanding Novice frequency privileges to include the entire 1.25 meter band made sense since Novices already are permitted to use SSB and CW on portions of the HF bands, and there was no reason why they should not be permitted to utilize those same modes in the entirety of the 222-225 MHz band, where other licensees use those modes.

The FCC agreed with the ARRL that allowing Novices privileges on the entire 222 MHz band was a good idea, saying that the changes would allow Novices "to become proficient in a wider variety of amateur service operations" and give them "more flexibility in selecting the mode of transmission.

"Choosing the appropriate mode would result in a more efficient use of available spectrum," the FCC said.

Not repeater control operators

In PR Docket 92-289, the FCC also proposed that Novices be authorized to be licensees and control operators of repeaters on the 222 and 1240 MHz bands. The ARRL opposed this idea, as it had during the Novice Enhancement proceeding in 1987. The FCC in its final ruling agreed, saying that Novices lack knowledge about repeater operation. The Commission also noted that allowing Novices to be control operators would diminish the distinction between the Novice and Technician classes.

Experimentation encouraged

The League also proposed that a "weak signal" segment be established at the bottom of the 222 MHz band, at 222.0 to 222.15 MHz, similar to what previously existed at 220.0 to 220.5 MHz. Repeater and auxiliary operation will, beginning February 1, be prohibited from 222 to 222.15 MHz.

The League said its proposal was in response to amateurs' loss in August 1991 of 220-222 MHz to the land mobile service, and that a weak-signal subband, which could not be enforced through voluntary agreements or formalized band-planning by amateurs, was necessary to allow amateurs to carry on experiments in propagation and operating techniques.

Some repeater operators, nearly all in southern California, said that severe crowding in the 222-225 MHz band there would make a 150-kHz subband untenable.

On the other hand, weak-signal operators said that

the loss of 220-222 MHz most severely affected them, rather than repeater users, and that repeater owners and users in the 222-225 MHz band had been unwilling to accommodate other types of spectrum use.

The ARRL told the FCC that it "remains persuaded that the issue reflects not any one group of amateurs refusing to accommodate another, but rather the difficulty of reaccommodating amateur users displaced from the 220-222 MHz segment."

The League noted that weak signal operators are entitled to pursue a variety of weak signal operations in some segment of the 222 MHz band, and such such operations are incompatible with repeater and auxiliary link operations on the same frequencies.

The League said that while it has always supported local, voluntary band-planning as a means to accommodate the interests of diverse groups of amateurs, such simply could not work in this case, and that current FCC staffing does not permit it to referee amateur-to-amateur disputes. Thus, a statutory subband seemed the only solution.

U.K. amateurs surveyed on HF no-code license

British amateurs are opposed to a code-free amateur license with HF privileges, an informal survey has shown.

The current U.K. Class B license, with privileges only on 50 MHz and above, is code-free; the Class A (HF) license requires a 12 wpm Morse code exam.

In 1992 the British Radiocommunications Agency asked the Radio Society of Great Britain to conduct a "consultation exercise," a survey. Through articles in its journal, *Radio Communications*, and other British Amateur Radio publications, readers were asked to express their opinion on the subject. Out of 60,000 U.K. licensed amateurs, 1,413 responded, including 86 from "overseas."

By a 2-to-1 margin the respondents opposed a code free HF license.

The RSGB said that with the worldwide amateur community expanding at some 7 percent per year, some method is needed to restrict access to the HF bands, which already are very crowded and unlikely to expand. It said that if the current method of restriction, CW, were eliminated, some other "filter" should be found.

"It is the way in which numbers are limited to avoid intolerable levels of interference that is being questioned," the RSGB said.

The RSGB said that "it is primarily up to the amateur community worldwide, and its elected representatives, to determine what qualifications are necessary and what standards need to be met to gain different types of transmitting licence."

Current International Telecommunication Union regulations requiring a Morse exam for an HF amateur license would have to be changed, through a petition process from individual countries, the article said, although it also noted that Japan has a code-free license that allows limited amateur privileges below 30 MHz (10 watts output and excluding 20 and 17 meters -- ed).

The RSGB noted that Region 1 of the International Amateur Radio Union as recently as September had voted to support keeping a Morse code requirement for HF licenses. The RSGB said it currently agrees with that opinion &#65533;but recognises that the situation may change in the next 5-10 years.&#65533;

Here is a summary of survey arguments for and against a code-free U.K. license:

Against:

* Would reduce &#65533;status&#65533; of amateur service;
* Standards already too low;
* Would erode &#65533;challenge&#65533; to licensees;
* Would make U.K. a renegade among nations;
* CW fundamental to &#65533;spirit&#65533; of Amateur Radio;
* CW has &#65533;communications advantages&#65533;;
* CW a common international language;
* CW alleviates HF overcrowding, encourages good operating.

For:

* CW a barrier to new licensees;
* Young people &#65533;put off&#65533; by Morse requirement;
* Morse no longer a &#65533;communications necessity:&#65533;
* Resultant band crowding would promote new technologies;
* CW is a relic, an &#65533;artificial barrier&#65533;
* Some people simply can&#65533;t learn CW.

The RSGB also said that a significant number of people responding to the survey also favored some sort of &#65533;incentive licensing&#65533; in the U.K., with more levels of license than the current two. The RSGB said that two of its committees are studying the idea of some sort of incentive licensing structure.

LICENSE RENEWALS TO BEGIN AGAIN IN 1994

Have you looked at the expiration date on your FCC license lately? Five years ago the term of an FCC amateur license went from five years to 10. So, for the past five years no licenses have expired. Licenses are now beginning to expire again, which means that *it may be time for you to renew*.

It&#65533;s a good idea to renew at least 60 days before the expiration date on your current license. Use an FCC Form

610, available from ARRL Headquarters. If you submit a timely renewal application, you may continue to operate even if the FCC doesn't act on the application by the expiration date. If your renewal is late, you must stop operating until your new license arrives.

Licenses that have expired for more than two years may not be renewed, which means you lose your call sign and will have to take the exam again. Don't take a chance - check your license expiration date now!

BRIEFS

* The FCC has extended to January 11 the comment period in ET Docket 93-62, which proposes to adopt new guidelines for evaluating the environmental effects of RF radiation, based on petitions for more time from CBS and ABC.

The new guidelines would parallel those adopted in 1992 by the American National Standards Institute (ANSI) and would impose stricter limitations on low-power devices such as hand-held transceivers and portable and cellular telephones.

* The ARRL DX Advisory Committee has recommended the creation of an RTTY DXCC Honor Roll, to require the same number of RTTY countries as the Mixed Honor Roll. On December 14 the ARRL Awards Committee approved the new RTTY Honor Roll, to include all non-CW digital modes, including Baudot, packet, ASCII, and AMTOR.

The DXAC also voted to maintain the "start date" for CW DXCC at January 1, 1975 (rather than moving it back to 1945 to match Mixed and Phone DXCC).

* The first private station DXCC application has been received from the People's Republic of China, from BZ4RBX of Nanjing. Operator Wang Long submitted 102 QSLs which, interestingly, did *not* include a card from his own country. The lucky American in this historic DXCC was K4MIH. DXCCs have already been awarded to PRC *club* stations BY4RSA and BY5AC.

* Those weird Canadian prefixes you hear are courtesy of Industry and Science Canada (their FCC), granted through the end of 1993 to mark Canada's new Amateur Radio national organization, the Radio Amateurs of Canada (RAC).

* The FCC has added Bosnia-Herzegovina (T9) to the list of countries with which the United States has an Amateur Radio third-party agreement.

* Manuscripts on antennas and propagation are being accepted through March 1, 1994, for Volume 4 of the ARRL *Antenna Compendium*. Prospective authors should contact Dean Straw, N6BV, at ARRL HQ.

* 1994 ARRL National Exam Days have been set for May 14 and October 29. Details will be in February *QST* but you

can start planning now by checking February, 1993 *QST*, page 96.
* Clean Sweep! We may not always be politically correct but we're diverse! With the recent addition of *QST* Managing Editor Al Brogdon, K3KMO, to the HQ staff, we now have every US call area represented on the full-time Newington payroll. For example: KR1R (Massachusetts); AA2Z (New Jersey); K3KMO (Maryland); KJ4KB (South Carolina); K5FUV (Arkansas); N6BV (California); KU7G (Washington); K8CH (Michigan); WB9RRU (Wisconsin); NT0Z (Minnesota); and even KH6CP.
* In other staff news, Assistant Technical Editor Jim Kearman, KR1S, has transferred from the "book team" to the *QST* editorial team.
* 13-year-old Nathan A. Taylor, WZ1W, of Gardner, Massachusetts is still missing after disappearing on August 27.
According to Gardner police, Nathan left of his own volition apparently under the influence of unidentified adults. Amateurs in Tennessee and Texas in particular are asked to keep his disappearance in mind; although an Extra Class amateur, Nathan's most recent interest has been in computers.
At least two agencies of the federal government are now involved in the search for Nathan. Anyone with information on Nathan is asked to call Detective Bill Grasmuck of the City of Gardner (Mass.) Police Department, at 508-632-5600.
* Arthur Milne, G2MI, died October 6, 1993, at age 86. First licensed in 1924, he was a member of the RSGB Council for more than 30 years. He also was a Secretary of IARU Region 1 from 1950 to 1959.
He is probably best remembered as manager of the U.K. QSL Bureau, a post he held from the beginning of World War 2 until the early 1980s. Thousands of DXers have thus addressed envelopes to "A.O. Milne."
Among his survivors are a son, G3UMI, and a grandson, G6VMI.
10 Years Ago in *The ARRL Letter*
Finally, the delayed first Amateur Radio operation from space was over, an "unqualified success," yet it was relegated to an inside page of the December 8, 1983 issue of *The ARRL Letter*.
The reason? ARRL's president of just 20 months, Vic Clark, W4KFC, was dead, of a heart attack at age 66.
The next available issue of *QST* carried a major tribute to W4KFC. First Vice President Carl L. Smith, W0BWJ, assumed the League's presidency. Fittingly, Straight Key Night on December 31 was dedicated to W4KFC.

The *Letter* had a very early report on
W5LFL/Shuttle. Astronaut Owen Garriott reported that noise
inside the shuttle made copy somewhat difficult but that
plenty of stations had been worked on 2-meter FM and more
had been recorded on tape.
Profile: Director-elect Lew Gordon, K4VX
ARRL Midwest Division Director-elect Lew Gordon,
K4VX, lives in Hannibal, Missouri. Lew's 64 and retired as
an electronic systems engineer for an agency of the federal
government.
Lew was born in Wabash, Indiana, grew up in
Indianapolis, and began his Amateur Radio career as W9APY at
age 17. He was a student at Purdue University when the
Korean War heated up, and he enlisted in the US Air Force.
He ended up an instructor at Keesler AFB in Biloxi,
Mississippi, where one of his Air Force students was a young
woman named Marie Teresa Girard. Lew asked Airman Girard if
she'd like to see the Military Affiliate Radio System (MARS)
station there (now K5TYP).
In 1954 Terry and Lew got married, and in 1955 Terry
became K5BRQ -- "General class on the first try."
After his Air Force hitch Lew went to work for the
government, then returned to Purdue to finish a bachelor's
degree in physics. The founder, John Purdue, suffered Greek
and Latin as a youth and disallowed its use at the
university, so Lew graduated in 1962 "with distinction"
rather than *cum laude*.
Lew and Terry moved to Manassas, Virginia, in 1963.
Terry got W4BFA and Lew was assigned WA4RPK through a
bureaucratic error. Lew finally spoke up and became W4ZCY in
1968, and then K4VX.
In Manassas the Gordons had two towers; today in
Missouri there are *nine* (with a tenth on the ground
waiting to go up). They retired to land that has been in
Lew's family for more than 170. Lew and his call sign are
well-known among contesters and he still does his own tower
work, including on the tallest, 170 ft.
*(This is the first of what we plan to be a series
of brief profiles of the ARRL Board of Directors family,
beginning with those elected last month.)*

Well, I thought I'd throw my two bits into this. I'm a college student as well, and as far as I know, the first active student ham Dartmouth College has had in several years. We do have a club station, but that has stayed alive only because of a faculty member who is a ham has taken care of it.

I got into ham radio this past year because of the digital modes available. I'm a CS major, and when I read an article about packet in a free computer magazine I got, I had to get involved. And I've had a very good time with my activities so far.

But there are a few things I have been disappointed with. First and foremost is the cost of the hobby. I've been licensed for four months, and I have still not saved up enough money to get even my first radio. I have been active only because I have been able to borrow the club's 10 year old 2m handheld until I can afford a radio. But one of the really sad things is that when I went for my license, I studied the code and passed the 5wpm test - but as I have been interning away from school (and the club HF station) ever since I got my ticket, I have yet to make a cw contact. By the time I do get in front of an HF rig, I'll have forgotten the code. In fact, I can't imagine when, in the next five years or so, that I'll be able to get my own real HF rig. It's just way too expensive.

One of the other things I would really love to do, and I think is one of the more exciting aspects of the hobby, is satellite communications. But when am I ever going to be able to afford that sort of equipment? Five, six years from now?

I guess until then, I'm going to have to remain satisfied with packet activity and experimentation. I am interested in trying to build new user interfaces for the packet network, and in providing new features for the network. But again, if I can barely afford to get an HT, a cheap TNC, a computer (which Dartmouth requires all undergrads to buy, anyway), and a C compiler, how am I going to start experimenting? It takes two to tango on packet, and trying to get radio companies to donate equipment has so far proven impossible (yes, I have been trying.)

Now, sure, someone can say that you can get on the air for <$100. But what does that get you? A QRP CW-only kit with a homebrew antenna and a straight key. While I am looking into this option as the only conceivable way I'll have my own HF rig before 1998, this is not going to attract young people to the hobby. And I have plenty of friends at school who have trouble deciding if they can afford certain textbooks, much less anything like radio.

To sum this up, if I had known how expensive amateur radio was before I passed my tests, I very well might have decided not to get involved.

From Tad Cook, KT7H
Seattle, WA December 17, 1993
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de KT7H

Average solar flux was down this past week by about 13 points compared to the previous period. Geomagnetic conditions were stable until the 16th when K indices reached four. Conditions are expected to remain unstable for a day or so.

This week solar flux should slowly start rising toward a peak near 105 around January 6. There is a chance of some disturbed conditions around December 28.

Sunspot Numbers from December 9 through 15 were 79, 60, 59, 33, 22, 36 and 23, with a mean of 44.6. 10.7 cm flux was 98.4, 96.1, 92.5, 90.9, 87.8, 87.9 and 85.4, with a mean of 91.3.

The path projection for this week is from Las Vegas, Nevada to Chile.

80 meters looks good from 0030 to 1030z, with the best conditions from 0300 to 0900. 40 meters looks good from 0000 to 1130, with best signals from 0130 to 0930. 30 meters should be good from 2330 to 1200, with best conditions from 0100 to 1000. 20 meters looks good from 2030 to 0130. On a few days 20 could be open as early as 1300 and as late as 1100, or nearly around the clock. 17 meters looks promising from 1500 to 0030, and 15 meters from 1530 to 0000. 10 and 12 meters look good from 1700 to 2330, with openings as early as 1500 and as late as 0100 on some days.

> the computer takes over all the bookkeeping chores, and I get to enjoy
> the visit on the air.

LogMaster Plus/Plus is now fully QRZ compatible. You can obtain information
by calling (800) 538-0001. A demo (without QRZ functionality - sorry) is
available on the Sensible Solutions BBS at (908) 787-2982.

The demo is functional with SAM, and Buckkmaster, and will allow you to monitor
the cluster and directly QSY your radio from the spots. It will also qualify
the spot against your log book ane indicate if its a new or needed country.

LogMaster is NOT copy protected, and gives full indexing on Country,
Prefix, U.S. State, CQ Zone, ITU Zone, 5 User defineable fields,
Grid squares in addition to callsign and date. Most other loggers only
provide indexing on callsign and date.
This gives the best data retrieval performance of any commercial
logger.

It seems to me that "in the old days" the bits that made up a radio
were vary simple. For a receiver a coil, cats whisker diode, capacitor,
antenna, and headphones made a receiver. Picked up AM. I remember
putting together such a set in the late 1960's. Listening to WLS was
fun then. Who would want to listen to AM broadcast now? Would a
ten year old want to listen a second time to young adults calling
in and whining on AM broadcast radio? I think not.

However, there are lots of IC reciever chips that are out that can
be used for FM. Not many parts are needed for something that could
pick up VHF. Weather service is a reliable signal in VHF, useful too.
A few parts changes would allow reception of public service bands.
I imagine it would be pretty cool to put together a radio that could
listen in on police and fire bands. Certain areas would have special
interests such as train bands, perhaps.

What I am getting at is that the availability of simple kits for radios
would be great. Something with some edudcational value. Years ago
my father bought me a subscription to some service called things of
science, or something like that. This was great! It had an optics
segment, built my own transit/telescope. A photography segment.
A chemistry and physics segment, including a smaple of uranium ore
and a cloud chamber to see the ion trails produced. But the neatest
thing was the two tube AM receiving radio. Powered by 110V AC with
a transformer. This series was great!

Anyway, the kits I imagine we could make now would use IC's that would
allow the construction of audio amplifiers, FM receivers, and FM
transmitters. Putting the young pre-hams in the 49MHz band would
allow easy to build transmitters, and yagi's could be made with
metal rods standing upright in little stands which would allow
the young-ins to play with reflectors and directors that are
reasonably sized. You could even duplicate Yagi's original paper!
Then add the VHF listening to weather band to please the parents, and
allow police scanning, which if felt to be slightly naughty, would
be a definate lure into technology. QRP in 49MHz using CW could
also be pretty cool, with some kids in the neighborhood signalling
eachother in Morse. (Secret codes will always be cool). Hey, maybe
even 49MHz modem links for the computer buffs.

One perspective to take is not that ham radio needs young folks, but
that the country needs enthusiasm for science in young folks, with
an expectation that that will bring a lot of enthusiasm into ham radio.

I have been using a PC HF Facsimile system for a couple of years sold by "Sofware Systems Consulting, John E Hoot". It is under $100. Comprised of a small demod unit mounted in a DB 25 plug. It's self powered so it will plug into anything. It uses a serial port and is compatible with all monitor arrangements up to VGA. Charts and Satellite photos can be black/white, or various color enhancements. Setup was "zero". Plug it into the radio (I had a "Record (line level)" jack on my Yaesu which was ahead of the volume control so I can monitor and capture at the same time. It has a setup "oscilloscope" mode that makes it very easy to tune. It also has an auto mode which can be set to capture any number of images at any programmed time.

Contact Software Systems Consulting
amateur Radio Group
150 Avenida Cabrillo, Suite C
San Clemente, CA. 92672
They have a BBS from 8 to 11 pm at (619) 259-5554

Comes with an excellent 60 page bound manual and 70 + pages of charts, details, etc...

5364. Hams and Linux

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-17 17:19:47 UTC
From: phil@fylz.com
Message-ID: <1993Dec17.171947.24787@fylz.com>
Source record: 273210

A couple of weeks ago I posted the following to the
Usenet newsgroup comp.os.linux.misc. I posted the responses (below)
to comp.os.linux.misc but realized it was probably of interest
to this group as well. In order to fill in the blanks I have
included the info sheet "What is Linux?" as well. The other obvious
question is "what is Linux Journal". To answer that I included
part of our info sheet on the magazine.

>I am the editor of Linux Journal, a paper magazine that will
>be covering the Linux scene. In my correspondence with people
>about writing articles for LJ I have seen an amazing number of
>ham calls. Being a ham myself (WA6SWR) I was just wondering
>how many of "us" are hams.
>
>If you are a ham, let me know and maybe include a short blurb
>about how/why you got involved in Linux. I think it could be
>interesting. I will post a summary and might even include the
>info in an upcoming issue of Linux Journal.

Rather than try to draw any conclusions I have decided to just
post what people said. I think hams will find it interesting.
Note that in the ham tradition I edited the signatures so
they consist of the person's first name and ham call unless
they didn't give me a call. Then I include the full name.

Assuming there are no objections (and enough space) I plan to reprint
this in the March issue of Linux Journal. I think it helps tie
Linux into another community. One who has traditionally been
on the leading edge of both technology and spending as little
money as possible. :-)

Any hams out there doing "ham stuff" with Linux and want to write
an article about it for Linux Journal?

The SLS/slackware distributions have basically given me a
UNIX/X workstation at home...wish my 486 was as fast
as the Indigo on campus though. :-)

I've been using Linux for over a year on a Gateway. I just now
have some time to try hacking on some programs for the radio.

Most of the time I'm on 80/20 meter PACTOR. I almost have a
PACSAT station working (still need a preamp and a few other
odds-and-ends).

I think Linux would work great for automating satellite uploads and
downloads, tracking, etc.
-Phil AD4FH

Well, this comes to you from host w4bzl.concert.net at the end of a quite
productive SLIP link. Of course this host at home runs linux.
AT CONCERT we have at least two other hams that run linux with their
calls as their hostname. I'll leave it to them to respond.
-Joe W4BZL

I'm a ham too, N5SNN down in Austin, TX

How I got involved? Well that's because our lab has too many junks
(or goodies in ham word), that made me just buy a used 486 motherboard
and a new 486sx/25 to start a unix-pc using Linux.

Why? To replace the NOS-box that I use for ausgw (austin's packet-internet
gateway) with a better system.

My linux is now 100% on the Internet (it's under my lab desk at campus),
runs gopher server, anon ftp, and uucp-internet gateway (private).

-Paulus N5SNN

Add me in there too. BTW, I started using Linux about 6 months
before becoming a HAM. Part of the reason for becoming a HAM was
the large number of them involved with Linux. ;)

-Jim KD4PPG

I am VK4BSB. Packet mail to VK4BSB@VK4ZGQ.BNE.QLD.AUS.OC

-Serge VK4BSB

Who, ME?
I've been a netnews reader since the Great Renaming.
I decided it was time to start working with the 'blood & guts'
of a Unix.....

-David WB8FOZ

I got interested in Linux last year when Algorithm magazine published
a quick blurb about the freely distributed Unix clone and how great
it was. I wasn't able to start playing with it until this past August
when I upgraded my old XT to a 486. Unfortunately, that also corresponded

to my starting a PhD program, so I haven't had much time to play with Linux, outside of installing SLS 1.03 and wondering how to patch what doesn't work!

-Chris N0OQT

I am: Jim Graham, N5IAL /4. I've been a general-class since '86. I live on Okaloosa Island, in Ft. Walton Beach, FL (NW FL). I started looking at Linux in mid-1992 as part of my (then) ongoing search for a UNIX that would run (read, would actually work) on my 386 at home. I finally got a tape drive, which made the installation much simpler, and a memory upgrade to make Linux happier, and installed 0.99 PL6 very early this year. Needless to say, my search for a UNIX system for my machine has ended.

Oh, I'm also the author of KAMterm, which is a shareware host mode terminal program for Kantronics TNCs. It currently runs only under dos (and some dos emulators, I'm told), but I'm working on porting it over to Linux (don't hold your breath---due to all of the things that are going on right now, and the fact that very few people have contacted me about KAMterm in the last couple of months, I'm not spending a whole lot of time on it at the moment...and the port wouldn't be a quick thing to do even if I were). Of course, there are other issues involved with a Linux port, such as the fact that KAMterm is shareware, not freeware, and so on (I need the KAMterm money to pay bills).

-Jim N5IAL/4

I use Linux because I want to run a Unix system at home. I'm one of those 'sick' people who like the punishment that Unix systems hurl onto their operators. I hope to working with packet radio, as I am a avid packeteer. I understand that there is a version of NOS out for Linux, but have not found it yet. Know where? I also know KB9CTJ here running it too. Were working together on this. I hate MSDOS too.

- Chuck WO9K

I use SunOS 4.1.3 at work and don't particularly fancy DOS or DOS/Windows. Linux is an excellent OS for learning how to admin Unix, as the SLS distribution comes complete with lots of configuration problems. That is the configuration for lots of the programs provided with SLS are incomplete or wrong, but close enough that it is better, and more realistic, than course examples. I will be almost upset if the next distribution has all of the problems fixed, as requested by so many flames, because I would have chosen a fixed version had I the opportunity and not learned nearly as much.

All the applications that I need for home are available on Linux
and the VC's are great. 386sx/16 with wait states *really* bogs
running X. I am waiting for something in c.o.l.a to brag about
an excellent TNC interface prog/doc set before I buy one and learn
about the real-ether network.

-Alan VE3ALO

FWIW, I'm not a ham, although I am studying to become one next year. At this
moment I'm using the CB for packet radio. [Don't panic -- Peter is in
the Netherlands where apparently you can do anything with CB as long
as the radio is type approved.]

At this moment Linux is one of the most promising systems for hams. At this
moment several versions of NOS have been ported to Linux, like Wampes and JNOS.
The big advantage is that these versions don't suffer from severe lack of
memory like most of the MS-DOS versions. And for the future, Linux will have
the AX.25 protocol in the kernel. The normal UNIX socket interface will allow
easy program development. It is also rumored that FBB will be ported to Linux
when the AX.25 support is built in.

Groetjes,
Peter Busser

I am WA8USA. I use LINUX on a laptop I have for work (image and digital
signal processing). I went to LINUX because of the large number of public
domain programs that are included in distributions (or are easily built)
and because the availability of source is helpful in solving problems.

-Bob WA8USA

I am a ham (ve3ich) and am active in Linux, but the reasons have
little to do with amateur radio. I suspect that the type of person who
is interested in amateur radio would likely be interested in Linux:
doing something technical that is new and state-of-the-art at a
low-cost.

I've used Unix at work for a number of years, and had various
microcomputers at home. It was a dream of mine to be able to afford a
machine at home that had the hardware and software capabilities of a
Unix workstation. Just over a year ago I bought a PC specifically for
the purpose of running Linux. I learned more about Unix in the first 3
months of using Linux that in 5 years of experience with commercial
Unix workstations. I now find myself wishing that the $10,000 Sun
workstation that I use at work had more of the capabilities of the
$1,800 Linux PC at home.

-Jeff VE3ICH

Well, there's my wife N2VIS (Carolyn Carrock) and me N2RDI...

I'm more a Unix admin geek type that got into Amateur Radio than a
ham that got into Unix...

My wife dared me to take the test at the Trenton Computer Festival after
hearing me say I could pass it...

If you're looking for writers -- I was a Unix instructor for Pyramid
Technology and a former newspaper editor and reporter...

I'm looking forward to subscribing... and reading every article in
LJ.

My last project -- idasendmail on Linux with pathalias routing.

My next project - 99.14 kernel and making a linux SVR4 lookalike
with all new scripts and the /sbin directory structure.

-Bill N2RDI

My call is KF6VB, I've been a ham since 1970. Ham radio got me into
electronics, electronics got me into software, software got me into a
nice career . But it all started with ham radio.

I got into Linux about a year ago, around version 95pl7, I think. Linux
offered me a way to learn about unix without spending big $$$. Also,
it allowed me to upgrade my home UUCP node to a much more powerful
environment than what DOS supported.

Four years ago, I got my jollies on the radio, talking to people all over
the world. Now propagation is in the toilet, and I get the same jollies
with uucp, email, and News.

I've also been a student of the Russian language most of my life, and
in the past few years I took two trips to Moscow. The first one was pre-Linux,
in 1988. Then I visited radio amateurs. I have pictures of Yours Truly
at the operating console of the Moscow Radio Club.

The second trip was last December; no radio buddies this time, just
people I met through the email. I took the complete latest SLS
distribution with me, and seeded Moscow with Linux! At that time,
people there had heard of it, but never seen it. Even while I was there,
I could see it spreading exponentially: people borrowed my diskettes,
copied them and gave them to other people, who copied them....

Right now, I am trying to get the Ka9q networking program running on
my 99pl9 system. If I am successful, I will be able to integrate the
amateur and landline email worlds at one console. So if I say "mail
wa6xxx@ampr.org" the system would automatically squirt it out the TNC
instead of the phone line. Also, since the Linux box runs 24 hours a
day, I would be able to offer routing to my friends, run an on-the-air

ftp site, etc, etc....

I too, have noticed the multitudes of hams on the linux groups; what's
more, I have seen more and more mention of Linux on the ham groups.
In my mind, hams have two main characteristics:

* They like to communicate
* They like to play with gadgets.

A Linux box is both a powerful communications platform and a really
neat gadget! What ham could resist?

-Jerry KF6VB

1 more. And soon to be a real US HAM (N5something) - I passed
the Tech exam some time ago.

: If you are a ham, let me know and maybe include a short blurb
: about how/why you got involved in Linux. I think it could be
: interesting. I will post a summary and might even include the
: info in an upcoming issue of Linux Journal.

I am also doing an AX.25/NETROM layer in NET-2.

-Fred N. van Kempen

I'm a radio amateur, and a LINUX user. My computer is not (yet)
connected to packet radio, but once I get around to buy my own rig,
instead of just using the radio club's (SK5EU) gear, it sure will
be. Sadly, TCP/IP on packet seems to be virtually unknown here in
Sweden.. :-(

-Ture SM5UUO

Phil, I'm N4HHE and saw your request to hear from Linux Hams in the mail-
archive on tsx-11.mit.edu. Don't know what kind of information you are looking
for. I use Linux for "recreational computing." When I work (as an electrical
engineer) my choice is Macintosh. Been Unix'ing for over 5 years, usually as
the system administrator, and always made sure I had a Macintosh that I could
use for login. A couple of years ago I "ran" a 12 machine Silicon Graphics
installation from a 512k Mac. Lots of fun.

Currently experimenting with TCP/IP over amateur radio. WAMPES has been
running at my home for the last couple of weeks. See some people gripe about
the lack of Linux documentation, they need to try WAMPES and *really* learn
about lack of documentation.

-David N4HHE

I'm a ham and I have used Linux since May 1992 I think. I just can't remember where I heard of Linux first, but I followed the development of Linux from November 1991 (or maybe December). First by listening to reports by others, from 23. January I started to 'finger' Linus' account to get the latest news about the state of Linux. As I said above, in May 1992 (or was it April? Hmm, not easy to remember.. :-) I started to actually use it, after having followed the mailing list for some weeks, enough to feel confident about how to install it and so on. I'm not using Linux for any ham-related stuff, one of the reasons is that I don't have a PC at home (I'm using Linux in my job only).

Tor LA1RHA

N3PFP. I'm essentially inactive, I only bothered to get license because I was planning on trying out packet radio. I passed the written tests up to advanced before I ran out of testing/checking time that day, but I've never done the code tests (and probably couldn't break 10wpm at my peak).

... still looking for a cheap, short-range 56k-1Mbs packet radio setup.

-Donald N3PFP

I am a ham, WB4ARV, but I only use linux at work. I at least have been working on it when I have time. I have been pulled to another project and have been unable to work on it for the last couple of months.

I also have been working on the depca cards for the ethernet so that has slowed me down alot. If I ever get it working good I think I will try to use it at home. I am not into packet at the moment but I may if I switch to linux.

-Joe WB4ARV

Alright, I'll bite! ;)

While in college, I started to dream of having my very own "unix box" to hack on for endless hours. The thought of being able to do this *and* get to participate in the evolution of a new OS was really exciting to me, and remains so to this day, a couple years later!

There is absolutely no doubt in my mind that I have been able to learn *so* much more about unix and PCs in general because of the decision to run Linux on my own computer. I have been able to contribute to portions of the OS in 1992 and early 1993, in the form of initial ports of network clients, a BBS package, and several X Windows games. I also established a free Linux-oriented BBS in late 1992 which continues to flourish and present new learning opportunities.

Ham Radio entered the equation this year, when I decided to once again obtain a license, this time Technician. I operated CW as a novice at the tender

age of nine years - fifth grade, and now enjoy 2 meter rag-chewing, packet radio and *maybe*, CW. Someday. When I get around to it again. ;) A small group of experimenters in the Bay Area are architecting a high speed packet network. It uses 256 Kbps modems designed by a fellow at Stanford, and protocols by a friend (Cliff Skolnick N1DPH) and myself. Mike Cheponis (K3MC) is the mastermind behind the project. A mailing list is set up on my machine (list is called "speed-freaks" - send mail to listserv@hip-hop.sbay.org with "help" in the body for info).

It's coming along, albeit slowly, and we're experimenting with some low-speed stuff right now. My Linux system talks to a 286 DOS box (running KA9Q) over ethernet, and from there out onto the local TCP/IP network; the 286 functions as a router, and allows access to network services on my Linux box from the ampr-net. Cliff and I are eagerly awaiting the release of the Linux AX25 drivers to try out and possibly integrate into our network software.

Hope you enjoyed reading this response to your post. I look forward to hearing other Linux-using ham operators' stories as well!

-Dave KE6AJC

Actually, the number of technical "netters" in *any* field who are hams is rather amazing.

++Brandon (JNOS Linux port, and if I ever get time I'll finish up some enhancements to XSat that make it almost worth using)
--... ...-- -.. . -.- ..-. ---.. -. ....-.-
[in English, 73 de KF8NH -- boy is morse code hard to read like that]

Hi. I am also a ham (WQ3S). I recently started running Linux because I wanted a REAL multitasking OS for my computer. I was already familiar with UNIX, so I found Linux to be an ideal choice for my needs.

-Andrew WQ3S

I got into Linux because I wanted a real Unix and it was free, and nowadays its free and better. I'm currently running a public access Linux box via AX.25 and WAMPES (much hacked).

- Alan Cox

Well, count me in. I've been keen on Unix from the git-go, but it always seemed to be out of my reach for hobby use until Coherent. When Linux reached ~pl12, I jumped in; never looked back.

One of these days RSN, I hope to start using Linux for some ham applications, but that's somewhere down in the queue. OTOH, it seems that I'm having so much fun dinking with Linux that the ham gear is gathering quite a coat of dust.

-John N4VU

I am N2VKD, just got my technician's license in June. Have been playing with Linux on my 386/20 for about a year now. Running packet radio here in New York City under Linux is one of the reasons I got my ticket. So, sometime in the coming year, I hope to get the radio gear and tnc that will best work with Linux. I joined AMSAT too, that big bird they are going to send up sounds exciting. Overall, I think Linux and Ham Radio will be great together, with both being the better from the merge.

-Jim N2VKD

I've been involved with Linux since 0.12. I work in data networking, and am an active packet radio operator. I am co-administrator of the Sydney amprnet tcp/ip Wormhole gateway. I have a strong interest in computing too, and for me, Linux is ideal, allowing me to meld my radio and computing hobbies into a single series of projects.

-Terry VK2KTJ

I am KD4UBM. I am eventually going to have a login: over the air via packet. It'll be a while till I get the money to buy the equipment, but I am setting up my Linux PC for it now.

-John KD4UBM

My call is DL4YBG, name is Mark and QTH is Berlin/Germany.
It was much fun working on a homebrew CP/M-system, because you could create your own system and built your own hardware. All this fun was gone when using MSDOS...
LINUX with its complete sourcecode and kernel-hacking brought back the fun to computing...

-Mark DL4YBG

Finally, my turn. I have been a ham for over 30 years and have always been on the experimenter end. Even build a remote base station when I was still in high school. I see Linux as another chance to experiment and hope to get Linux and ham packet plugged in together.

-Phil WA6SWR

+--------------+

What is Linux?

Linux is an independent implementation of the POSIX operating system specification (basically a public specification of much of the Unix operating system) that has been written entirely from scratch. It currently works on IBM PC compatibles with an ISA or EISA bus and a 386 or higher processor. The Linux kernel is written by Linus Torvalds from Finland, and by other volunteers. Extensions include the Postgres database system and the MIT X-windows system.

An average system requires 8MB of RAM and 300-1000MB of disk storage along with the usual array of peripheral equipment such as VGA monitors, keyboards, floppy disks and interface boards. Packaged versions of Linux are available on floppy disks, cartridge tape and CD-ROM and range in price for $50 upward depending on what is included.

For hardware vendors, Linux is a chance to offer computer systems and upgrades to a set of users that are likely to need more memory, larger disks and communications products such as multi-port serial communications boards and multiple modems per installation. Linux also includes TCP/IP and NFS making multi-system configurations connected through Ethernet links fairly common.

Although the initial Linux effort was started as a more or less hobby project, commercial distributions and commercial use of Linux systems are becoming more common. It is expected that Linux will play an important role in the current computer industry trend of downsizing as a single Linux system running on standard PC hardware can act as a server for multiple systems as well as offering a low-cost alternative to proprietary workstations running the Unix operating system.

Most of the development of the Linux system has taken place in semi-public forums on the Internet where current readership of the Linux newsgroups is around 100,000. This effort has grown to this substantial size in only about 2 years. Linux Journal plans to document this effort and bring it to other computer professionals and enthusiasts that do not currently have Internet access.

Over the next two years, we expect to see an amazing growth in both the number of Internet users and the number of Linux users.

In fact, Linux will be the tool that many people choose in order to get themselves connected to the Internet.

To support this growth, hundreds of thousands of PC-based computer systems will be purchased or upgraded to run the Linux operating system. All these computers will run a 386 or higher processor. Most upgrades will take place in the areas of disk storage, backup systems, multi-line communications boards, modems and Ethernet hardware.

Extracted from the Linux Journal info sheet

The magazine will be published monthly and we plan to have the first issue available February 1994.

Editorial:
Phil Hughes is Editor of Linux Journal. He can be reached at the West Coast office at the address and numbers indicated on this letterhead. He can also be contacted via E-mail at phil@fylz.com.

Linux Journal is actively seeking articles on various Linux-related topics. You can send queries to Phil at this address or just indicate your interest in writing for Linux Journal.

Advertising:
Joanne Wagner is the Linux Journal advertising representative. She can be reached at the address and numbers above or contacted via E-mail at joanne@fylz.com.

If you have a product that you feel is of interest to the Linux community, call, write or FAX Joanne and request a rate card.

Subscriptions:
Subscriptions and other requests are handled by our East Coast office where Robert Young is our publisher. (Bob also publishes New York Unix.) Subscriptions are $19/year in the United States, US$29/year in Canada and Mexico and US$39/year in other countries. Payment can be made using VISA, MasterCard or American Express (make sure you include the credit card number, expiration date and signature).
Send subscriptions orders to:
Linux Journal
P.O. Box 3364
Westport, CT 06880-8364
or FAX them to (203) 454-2582. You can also place subscription orders via phone by calling (800) 546-7274 in the US or +1 203 454-3242 elsewhere.

SpaceNews
=========

MONDAY DECEMBER 20, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited distribution.

* ITAMSAT-OSCAR-26 NEWS *
=========================
After examining the memory dumps taken from IO-26, Alberto Zagni I2KBD
and Harold Price NK6K have decided to begin the uploading of the high-level
software to restore IHT (Itamsat Housekeeping Task) capability.

The cause of the crash is still unknown. I2KBD and NK6K are working on
the memory dumps, but the crash destroyed part of the internal logs kept
by the high-level software. Since the crash happened as one of the
Command Stations in Milan was uplinking to the satellite using a new ground
software (which has not yet been fully tested), there is chance that this
was the cause of the crash.

The ITAMSAT Command Team has decided not to turn the BBS on after the
reloading of the software. The Team will start some WOD data collection
in order to fully optimize the energy budget onboard the satellite.
This will enable IO-26 to have higher power settings on the downlink.
Stay tuned on the downlink for any late news!

The ITAMSAT Command Team would like to thank again Harold Price NK6K
for the great help in debugging the memory dumps and the Eyesat Command
Team for helping during the initial recovery.

ITAMSAT Command Team can be reached via Internet as i2kbd@amsat.org
or ik2ovv@amsat.org, and on Compuserve HAMNET.

* AO-21 NEWS *
==============
After corresponding with Peter, DB2OS, Rick, VE4AMU reports that picture
transmissions may be coming to OSCAR-21 soon. These transmissions will
be WEFAX compatible, so equipment currently used by ground stations to copy

Meteosat and NOAA satellites will work with AO-21 transmissions. Image uploads to the satellite will be through control stations and will use JPEG compression.

[Info via VE4AMU]

* OSCAR SKN '94 *
==========
YOU'RE INVITED TO THE 22ND ANNUAL "STRAIGHT KEY NIGHT ON OSCAR"

As you know, ARRL has for many years sponsored Straight Key Night on New Year's Eve and New Year's Day; it is expected to do so again in 1994.

On New Year's Eve, 1972 (January 1, 1973 UTC), a few of us on the AMSAT 75-meter net decided that we would try to combine the best of the old and the new in Amateur Radio by operating in Straight Key Night on what was then the brand-new communications satellite, AMSAT-OSCAR 6. Since then, proud brasspounders have kept the tradition going by operating CW on OSCAR using straight keys for at least a little while on every New Year's Day (UTC) when there's been an OSCAR to work.

You're most cordially invited to join in the 22nd annual celebration. It's entirely informal and unofficial; there are no rules, no scoring and no need to send in a log. Just call CQ SKN in the CW passband segment of any OSCAR satellite between 0000 and 2359 UTC on January 1, 1994, or answer a CQ SKN call from another station. This year, we're changing things a little: we'll also count QSOs made via the oldest, largest and most reliable communications satellite, OSCAR Zero, otherwise known as the moon. AMSAT didn't build it, but we can adopt it! Of course, all SKN operating must be done with a straight hand key.

Just as in the ARRL HF version of this event, we're conducting a search for the OSCAR SKN operator with the best fist. Please send in a nomination of someone you worked; we'll announce the winner or winners via packet bulletin. Last year's winners were KB6A, W6HDO and W8JAQ. Nominations may be sent To Ray Soifer via packet to W2RS @ WA2SNA.NJ.USA.NA, from Europe to W2RS @ GB7HSN.#32.GBR.EU, via Internet to w2rs@amsat.org, or by mail via his Callbook address.

[Info via Ray, W2RS]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60 (1994 test fee will be $5.75).

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;

5368. US License Examinations Scheduled 12/16/93 to 2/14/94

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-17 17:43:05 UTC
From: bjahnke@arrl.org
Message-ID: <7707@bjj>
Source record: 273317
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60 (1994 test fee will be $5.75).

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

Does anyone know if any magazine has ever done a product
review of the Carolina Windom ?

I found a little information in World Radio June '88 and July '88
but I couldn't find any product reviews. Their ad in QST and
CQ states that 6 product reviews can't be wrong!

: style transceiver. ...

: This is a fairly crude design in my opinion.The DPDT switch has single
: conductor hookup wire going from the switch to the board (six of them)
: about 2.5 inches long. The switch selects between 80m and 40m lc circuits
: which feed the base of the bipolar transistor, the oscillator. ...

The long leads would likely cause mechanical instability, but not chirp
(except for a possibility mentioned below.)

What are you using for a power supply? If the power supply voltage is
not rock-solid when you key the transmitter, that could easily cause the
chirp. For a test, hook up the radio with short, fat leads to a car battery
or well-regulated power supply. If the chirp goes away, then that's the
problem.

: By the way there is no shielding around the transistor section
: of the oscillator, the inductor is in a metal can but that's it.

The long leads leading to the VFO tank could be picking up RF from the
power amplifier stage, which could cause chirp. Try shielding the entire
VFO (aluminum foil works for a temporary test) to see if that's the cause.
Check power supply bypassing -- RF can get into the VFO that way too.
One of those could easily bethe problem, since the power amplifier and
oscillator are on the same frequency in direct-conversion transceivers.

Surprisingly enough, this is a big draw to get people into amateur radio. The application sheet for our local ham club has boxes to check off for what areas the new member is interested in. The RACES/ARES (emergency communications) and Public Service Communications boxes are far and away the most commonly-checked items.

I had always thought that participating in RACES was considered an unpleasant chore that you had to do to "pay" for the fun you have doing other more interesting things in amateur radio. Evidently most people see it as one of the most fulfilling areas in the hobby.

I was on HF yesterday for the first time in months. I heard a LU station about 3X1, but I got him 5X9 (love that FT-990). Anyway, he got my callsign correct, but I couldn't understand some of his phonetics. I tried to look him up with what I had, but came up empty handed. The international book I was using is several years old (1992 I believe).

If someone with a more recent book (a CD rom would be great for this) could give me a hand, I'd be grateful. Here's the information I have.
His Call: LU5*II His Name: Claudio
His QTH: Santa Fe, Buenos Aries, Argentina
He was on 28.455 at 20:13 UTC, 12/16/93

That's what I have. The missing letter sounded like "Q", but I'm not sure. I'd really like to QSL him, and Argentina would be great since I don't get on HF much (My only other confirmed DX is Japan). Thanks in advance and 73's!

Ed-

I'm not familiar with the Ten-Tec, but other chirping oscillators have problems with voltage regulation, and unstable loads.

Aside from improving the voltage regulation, you might try leaving the oscillator on continuously during transmit, and keying a subsequent stage. In the latter days of vacuum tube transmitters, "grid-block" keying was used to accomplish that. Earlier transmitters put the key in the cathode of one of the later stages.

Other QRP transceivers have a circuit to slightly change the frequency of the VFO, to provide approximately 800 Hz offset between transmit and receive frequencies. If yours does this (and it probably does), that offset circuit may be contributing to the chirp.

ARRL has published a couple of volumes, containing summaries of QST Hints & Kinks related to problems with QRP rigs. If you have access to a store that carries them, you might take a look for your Ten-Tec.

Lines: 10
Message-ID: <2ej695INNhbt@dns1.NMSU.Edu>
NNTP-Posting-Host: dante.nmsu.edu
X-Newsreader: TIN [version 1.2 PL1]

I hope this isn't a stupid FAQ, but I would really like to get
some information: How can I get lists of 2m/70cm frequencies used in
certain geographical areas, along with repeater offsets and access tones?
It would also be nice to know police, etc., frequencies.
I'd REALLY appreciate any suggestions. The only references I
found (at Radical Shack) didn't have offsets or anything. I am
particularly interested in the New Mexico/Colorado area.
Thanks in advance for the help!

5385. How callsigns are sequenced

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-17 22:17:46 UTC
From: jfh@netcom.com
Message-ID: <jfhCI79xM.9GB@netcom.com>
Source record: 273289

There was a very interesting article in the December 1 W5YI report about the sequence in which callsigns are assigned. Here's how it's done (as of the mid-70's, I think). "A:", "B:", etc. at the beginning of a line mean the call sign group - A for Extra, B for Advanced, C for Technician or General, and D for Novice.

Call Sign Assignment Order

= a number, $ = sequential letter

Outside the 48 contiguous states:

Pacific area
A: AH#$, KH#$, NH#$, WH#$, group b
B: AH#$$, group c
C: KH#$$, NH#$$, WH#$$, group d
D: KH#$$$, WH#$$$

Alaska area
A: AL7$, KL7$, NL7$, WL7$, group b
B: AL7$$, group c
C: KL7$$, NL7$$, WL7$$, group d
D: KL7$$$, WL7$$$

Atlantic area (Caribbean)
A: KP#$, NP#$, WP#$, group b
B: KP#$ (I assume this is a typo for KP#$$), group c
C: NP#$$, WP#$$, group d
D: KP#$$$, WP#$$$

Continental US
A: K#$$, N#$$, W#$$, AA#$-AK#$, KA#$-KZ#$, NA#$-NZ#$, WA#$-WZ#$, AA#$$-AK#$$, group b
(prefixes AH, KH, KL, NH, NL, WH, WP reserved)

B: KB#$$-KZ#$$, NA#$$-NZ#$$, WA#$$-WZ#$$, group c
(prefixes KH, KL, KP, NH, NP, WH, WL, WP reserved)

C: N#$$$, group d

D: KA#$$$-KZ#$$$, WA#$$$-WZ#$$$
(prefixes KH, KP, WC, WH, WK, WL, WM, WP, WR, WT reserved)

Reserved non-geographic prefixes:
WC - RACES
WK - Club
WM - Military recreation
WR - Repeaters

WT - Temporary licenses
WZ - Temporary operating authority under proposed new rule

W5YI also mentioned that two letter call signs with the first letter Y were originally reserved for institutes of higher learning - W5YG for Rice, W5YJ for Oklahoma State, W5YM for the University of Arkansas, and a bunch of others. W5YI once belonged to Rice as well.

Were there any other specially designated letter combinations?

==========

Callsigns assigned as of November 1:

District Group A Group B Group C Group D
Extra Advanced Tech/Gen Novice

0 AA0PJ KG0JP N0ZFP KB0LMN
1 AA1HU KD1SC N1QOL KB1BEI
2 AA2QI KF2SM N2XAA KB2QPY
3 AA3GK KE3KS N3QVP KB3AZG
4 AD4MR KR4HF ++ KE4HJE
5 AB5QJ KJ5SC ++ KC5DZT
6 AB6YI KN6US ++ KE6DDA
7 AA7ZR KI7TD ++ KB7JZM
8 AA8NC KG8EZ ++ KB8QHH
9 AA9JF KF9SE N9VKZ KB9IVZ

N. Mariana Is. AH0V AH0AO KH0CF WH0AAY
Guam NH2X AH2CT KH2HN WH2ANH
Virgin Islands WP2C KP2CC NP2GT WP2AHU
Johnston Is. AH3D AH3AD KH3AG WH3AAG
Puerto Rico ++ KP4VW ++ WP4MLM

>prospect of any real fun?

Well as a 16 year old whas held a license for almost two years now, I
have to say not to worry too much..There will always be people who want
to "play" (or more importantly to "understand") with things. The main
draw to ham radio was both the actully radio aspect of it, but also the
group that ham radio is. My local club (Central Vermont Amateur Radio
Club) was experincing what you desccribe..Then for some unkown reason a
bunch of us kids just went "hey that sounds like fun". A key suggestion
is to have clubs and people who give classes, hold them at a school. Not
only is it a most logicly place to do this, (Guess what its day-job is..)
but if you have a member who is a teacher he can spread the word and try
to get peple intrested. In our reletivly small area, a school where the
teacher got involved, there is currently a radio club of ~60 kids. So
intrest is still out there...

(going back to why I got involved, i sort of left that dangling)
The other aspect was the community. I really enjoy talking with people
about Rf scince, math that is involved, general scince...Whatever..and
where else (besides internet) am I going to find that in vermont?

Enough withe rambling..

I would like to put my $.02 into this debate. First define young. Lets say less than 20 yrs. I was given an HF reciever at about age 10 by my grandfather who was a ham. Enjoyed listening for years but never considered joining. Got my ticket during my first year of college at Worcester Polytech (Home of W1YK). The reason: tremendous access to a shack equipped for DX, VHF, UHF etc. In my opinion there is nothing like the allure of true DX and talking to people all around the globe. It seems to me (in a narrow view) that the people who join the amateur ranks, and stay active, are not interested in 2m communications during their commute to work. Sadly, when I used to teach classes, 9/10 were there only to upgrade to tech and get their 2m gear on the air. If this is the introduction to radio that most kids get, then is it no wonder they do not have, or maintain interest??? BTW, I don't buy any of the expense/antenna related arguments for staying off the HF bands. Computers are much more costly to feed than a ham habit, and good HF can be found with just wires. I do, however, long for my 4el at 175 ft.

Speaking of filters and FT1000s...

I am contemplating the purchase of an FT1000. I have heard good things about the FT1000 and I have heard some bad things. I have had the opportunity to use two different FT1000s recently, and I do like the performance of the receiver on CW. I began investigating what I would likely have to shell out for one of these and I discovered that there are two different models available; the FT1000 and the FT1000D. The 'D ("deluxe") model includes the bandpass filter for "dual band reception", the TXCO (more stable oscillator), and 3 additional filters (including the 2K filter). According to the AES catalog, the combined prices of the 5 additional accessories included in the D model did not equal or exceed the difference in list price between the D model and the standard model. I asked the person at AES why this was and he did not know. I asked about the TXCO accessory and it turned out that there was a specified four-fold improvement in stability (.05 ppm accuracy versus .2 ppm without the TXCO). Close enough for me. In short, it appears that the FT1000 is likely the better value because you can add any option later if you choose to do so. I guess the "added value" of the D model is that you do not have to install the five accessories yourself, if you really want them anyway (the delta is about $200). I would be interested in hearing opinions from FT1000 owners before I take the plunge. I have some input, but some more would not hurt. I have been a Kenwood TS-930 owner for many years, and am ready to upgrade to a more modern transceiver. I suspect that the FT1000 is a good choice. The current price of an FT1000 with no accessories is around $3000 at the moment. The list price is close to $4000. Good thing that I have been saving my pennies.

5393. Re: Where are all the young enthusiasts?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-17 23:15:59 UTC
From: cooper@adoc.xerox.COM
Message-ID: <9311177561.AA756170159@beluga.adoc.xerox.com>
Source record: 273292

I've just finished reading a slew of messages on this subject, but there's a perspective that they all seem to have missed. I read disappointment that we can't get young folks interested in building radios, and lack of surprise at this given today's market.

It seems to me that the excitement in building radios in earlier days came, at least in part, from the fact that you could be on, or at least close to, the leading edge of the technology in your own shack. That clearly isn't the case any more with building regular radios - how many people could come anywhere close to designing and building their own competition-class HF radio at home?

But that doesn't mean that all is lost. Not by a long shot. Almost anyone with any interest in science gets excited by shuttle missions and other parts of the space program. This seems an obvious way to get people interested in ham radio. The opportunity to talk to astronauts directly, to communicate with any number of spacecraft, to receive your own weather satellite or other earth images, to use a BBS that's up in space rather than across a boring old phone line - these are the kinds of things that young folks - and old - could get jazzed about.

And then there are the other, stranger, sides. Take someone who's seen regular circuit boards - inside a PC, for example - and then show them the inside of a 10GHz radio. They've probably never seen anything like it. Take someone who has even the simplest understanding of how "normal" radio transmission works and tell them about spread spectrum. These are the things magic is made from.

Amateur radio isn't about building the same equipment you can buy in the store, it's about being on the leading edge of the technology. It's about exploring new ways of doing things, pushing the frontiers. You won't get people excited in a hobby like ours by showing them how to do the same things that their father and his father before him used to do. Show them what's out at the leading edge, show them where the excitement and exploration is, and then show them how they can play the game.

Martin.

KLEE:

I recommend charging them prior to storage, especially if they are in a pack. Single cells are OK to store either way. In fact individual cells which I purchase are usually pretty dead. I use many 4-cell and 8-cell packs with my radio control airplanes. I normally charge them when stored for the winter, then if I think about it, charge them at least once every three months. I also have a battery cycler that I use, especially in the spring before I put the batteries back into normal use. I will usually charge them up and then run them through the battery cycler to determine existing capacity (I get a direct milliamp hour capacity readout), charge them up again and go fly. If the capacity is less than 60% of rated, I cycle them a couple of times. If they don't come up, they get thrown away. Of course airplanes are more critical to battery failure than radios. I haven't heard of an HT crashing and burning as the batteries gave out. The other option is to give the reduced capacity batteries to my kids for their battery powered toys.

I would not store a pack dead or near dead, because weaker batteries can be reverse charged by stronger ones (at lest as long as there is some closed circuit that keeps memory going or something else).

My two cents;

I have a friend who has hung a beach-ball with a face painted on it from his beam. Seemed to do the trick until a neighbor shot it with a gun and deflated it. I have successfully used the owl trick at my business. We had a terrible problem with pidgeons. Bought the owl mail-order from Brookstone a few years ago, the owl has held up fine and the pidgeons have never returned.

A couple of months or so ago I mentioned that there were plans running around for a homemade VOX intercom that was designed for aircraft use, but would also be useful for multiop contesting. I've finally found the info again.

If you're interested, drop email to Dave Allen, WB0TAQ, at davea@col.hp.com. He'll pass along an ASCII schematic, parts list, and information document. The folks who have built it so far report good success with it, although Dave cautions that some extra bypassing may be necessary in a high-RF environment. I haven't built it yet, though it's on my list of things for the next Field Day...

Steven:

When I was in grad school at AFIT (Air Force Institute of Technology),
Wright-Patterson AFB, Don Lowe, current president of the Academy of Model
Aeronautics (AMA) was experimenting with ground guided aircraft through a
TV camera in the plane. It has been done by more than a few people, and
successfully. TV cameras and transmitters are small, light, battery
powered, and don't require too high an output. In fact my thesis project
was designed to carry a TV camera, but we did the aerodynamics and model

design, and the TV was to be the next group's project.

The helicopter problems are vibration, payload, and model orientation. I have read articles in the model magazines describing still cameras, movie cameras, and thoughts about tv cameras in helicopters. There have been problems with vibration. The fixed wing aircraft in the wingspan area of 10-12 feet, are stable, can isolate vibration, are easy to fly, and can carry a good payload. Keep after your dreams and you can do it one day. A ham license and a transmitter on the ATV (?) frequencies can take care of that stuff.

You have to keep the aircraft within visual range, even with a TV camera because your field of view is too narrow (both vertical and horizontal) to maintain adequate navigational references to find your way back to your takeoff site. The typical RC transmitter puts less than 750 mw into the PEP, yet works well out to 1.5 miles, which is well beyond visual range for a normal model aircraft. Perhaps one of the 49 Mhz licenseless frequencies, maybe just boosted a bit would provide telemetry to you. I can't say that I know the output limit on those fequencies, so don't take my word for it.

In one of the model magazines, Radio Control Modeler Magazine, there is an advertisement for a group wanting folks to join, for air to ground electronics.
Write to: Dave Ewen, P.O. Box 16629, Wichita, KS 67216. He also gives a BBS: CCINK at (203) 871-1988. I am taking this from my August 1990 issue, and my more current magazines are at home, so this may be out of date, but give it a try. They are using/interested in navigation, telemetry, and control systems for radio control RPV electronics. This should give you some neat contact for your projects.

Have fun,

Milt

Source record: 273308

To the author of FFT or to anyone who can reach this person:

I have made a major improvement in fftmorse which uses a radix
4 FFT, thus has MANY fewer multiplies and does a 64 pt FFT in
less time than your 32 pt and I could do a 128 real FFT in almost
the same time as the 64 pt using a trick. I would like to send
you the code for your perusal but your mail address in canada
rejects you as an unknown user even though I can get directly
to the site.

Sorry for imposing this on everyone else.

Now, to do the same thing for sstv, fax, etc. ;-). These sound
blasters are going to BURY all the DSP boxes.

Bob

>Hey, Derek, they keep leaving us 2x2 out! Are you sure we have
>legitimate U.S. Group A calls? :-)

Not sure, we are just furriners anyway, old chap, what? I sure
have seen a lot of misleading information posted about the US call
sign allocations, but it doesn't matter really, you can't tell who
lives where or what class anyone is, most of the time.

A lot of non-US stations don't even know that US hams do not have
voice privileges between 14100-14150 etc. It's nice and quiet down
there, relatively speaking. Only person I ever worked in that band
was ET3A in Ethiopia, who was on 14025, listening up, and farther up
and farther up as time went on. I think he ended up listening on 10m.

NOTE: The Effective Sunspot Number for 15 DEC 93 was 42.6.
The Full Kp Indices for 15 DEC 93 are: 2o 2+ 3o 3- 3o 2- 2- 1o

SYNOPSIS OF ACTIVITY

Solar activity remained very low. New Region 7637
(N08W05) emerged rapidly and is now a small D-class group.
A strong arch filament system is visible there. Region 7635
(N03E51) remained stable. A recent magnetogram shows mixed
polarities in the plage field of this region.

Solar activity forecast: solar activity should be very
low. If growth continues in Region 7637, small C-class
bursts should begin to occur.

The geomagnetic field was quiet until approximately 0500Z
when a coronal hole related disturbance began. Mid-latitudes

were predominantly active after that time. Planetary indices were also in the active category but some high latitude stations experienced minor to major storm conditions in the latter half of the period.

Geophysical activity forecast: the geomagnetic field should be generally unsettled on 17 Dec with active conditions probable during local nighttime. Mostly unsettled levels are forecast for 18 Dec. Active conditions are expected to return on 20 Dec as a result of the filament disruption noted yesterday. The timing and severity of filament related disturbances are difficult to forecast.

Event probabilities 17 dec-19 dec

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 dec-19 dec

A. Middle Latitudes
Active 30/15/30
Minor Storm 20/05/20
Major-Severe Storm 05/01/05

B. High Latitudes
Active 30/15/30
Minor Storm 20/05/20
Major-Severe Storm 05/01/10

HF propagation conditions were below-normal over the high and polar latitude paths, particularly following the arrival of the coronal-hole related disturbance noted above. Conditions since then have been generally poor with very poor conditions being occasionally noted over the high and polar latitude night-sector paths. Middle and lower latitudes have remained near-normal. Similar conditions are expected over the next three to four days, through 19 or 20 December.

Hello,

I have an old tube rig that has Model NC-173 on the front. It also has two stickers on the bottom. One is a warrenty, the other states that it was made January, 1 1946 by the Hazeltine Corporation National Company. I would appreciate any information on what type of radio I have and if someone might have a copy of an operators manual which I could get copies of. Schematics would be great also. Thanks for any information anyone can offer. Please either post responces here or E-mail me directly at:

robertm@uplherc.upl.com or robertm@ursula.ee.pdx.edu

thanks and 73,

Rob Mohr

NOTE: The Effective Sunspot Number for 16 DEC 93 was 44.0.
The Full Kp Indices for 16 DEC 93 are: 1+ 3+ 3+ 4o 4- 4- 3+ 4-

SYNOPSIS OF ACTIVITY

Solar activity became low due to a long duration C2/SN
flare at 17/2029Z from Region 7635 (N02E39). At press time, a
report was received from the Culgoora observatory that a Type
IV may accompany this flare (STD: a weak Type IV was confirmed
from this event). No sunspot dynamics were observed in this
region and the mixed polarities observed yesterday weakened.
Region 7637 (N07W18) ceased the growth noted on 16 Dec and
stabilized.

Solar activity forecast: solar activity should return
to a very low level. The long duration C2 flare mentioned

above is characteristic of a decaying region and additional
or larger events are not likely.

The geomagnetic field was unsettled to active for the
entire period as the coronal hole related disturbance slowly
subsides. Again today, some high latitude stations experienced
minor to major storming.

Geophysical activity forecast: unsettled to active
conditions should be experienced through 18 Dec as
the current coronal hole disturbance decays. A filament
related disturbance is expected to begin on 19 Dec and
continue into 20 Dec resulting in mostly active levels for
that interval.

Event probabilities 18 dec-20 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 dec-20 dec

A. Middle Latitudes
Active 30/30/25
Minor Storm 10/20/10
Major-Severe Storm 01/05/05

B. High Latitudes
Active 30/30/25
Minor Storm 10/20/10
Major-Severe Storm 05/10/05

HF propagation conditions were below-normal over the high
and polar latitude paths. Enhanced geomagnetic and auroral
activity has been responsible for producing generally poor to
occasionally very poor conditions, particularly on night-sector
high-latitude paths. Middle and low latitudes were less
disturbed and retained near-normal propagation with increased
levels of night-sector fading and some signal distortion.
Conditions are not expected to improve over the next 24 hours.
A filament-related disturbance should keep propagation
conditions below-normal over the high and polar latitude paths,
with an outside chance for producing below-normal conditions
for middle latitude paths. Night sectors will continue to see
the strongest degradation. Some gradual improvements should
begin to be observed on 19 and 20 December.

>talk about one of the members antenna systems he had 15 years ago. It
>was somewhat interesting, but I don't see that exciting to many young
>people to join.

Agreed. We need to make Amateur Radio interesting to the younger crowd
(well, I guess at 23, I *am* part of that younger crowd, but...) but how?

>The main reasons the ham may be losing popularity with young people is
>1. The excitement of talking to people from different areas and
>foreign countries can now be done via a home computer (much many
>households have anyways).

One way to integrate the excitement of amateur radio with the computer
revolution is to stress sme of the hi-tek aspects of the Amtateur Radio
Service (I can hear some OT's groaning out there...). Many of the more
popular online services have net e-mail access (and one or two o them
hve more thn that). These services could very easily be parallelled in
amateur radio (and they are!). Why aren't non-amateurs aware that we're
more than just a bunch of OFs who sit around pounding brass?

>2. More people live in cities now. What is worse, more people live in
>apartments. Not many people can set-up fancy rigs with huge antennas
>in an apartment building (I have asked :-). This limits people to the
>hand-held jobbies, that most newbies will get from Radio Shack (so
>that is only 2-Meter band and 440MHz I think).

This is part of the "Amateur Radio == QRO" syndrome. If you have an apartment
with a balcony, you can easily set up a vertical whip, such as a Texas Bug-
catcher. You can also drop off a random wire. If you have a clothesline,
you can run several different sized dipoles out on it, depending on how
big it is. You also don't *need* that fancy YACOM-9000 with 256 memories,
1.5MHz-2.4GHz coverage, electronic keyer, and built-in coffee maker. My HF
rig is a vintage 1970 Heathkit HW-101. It suits me, though I'm saving my
nickles and dimes to buy a newer one. As for power? Why do you need to
put out 1.5kW? 25-100W out is enough to contact anyplace in the world if
you've got the patience.

>Things that will help is when you can buy a multi-band hand-held radio
>for a fairly good price. And maybe when packet-radio and SSTV catch on
>more ham will re-gain popularity.

Already possible. Check hamfests and let local amateurs know what you're looking for. You'll find one.

Now, I've got one question for everybody: Why isn't amateur radio *actively pitched* to the younger crowd? For instance, just after I'd earned my first license, I visited my parents. I took my code-practice oscillator with me to work on my speed. My two sisters found it in my car (ages 14 and 11). They thought it was so *neat*! So I bought them a key and guess what? We're well on our way to having at least two more hams in the family (it wouldn't surprise me if they're dragging *mom* into it too, to help them study...then *dad*'ll crumble soon enough, and I'm working on my other sister...*cackles gleefully*).
But why have I never seen Amateur Radio operators go into schools and pitch their interest (or at least in this area)? There're all sorts of neat and nifty things like SAREX (what technology-dazzled kid wouldn't love to her directly from the *space shuttle* and see SSTV images, maybe some ATV and even have the remote chance of *talking back*?), SSTV, packet, ATV...all of those would rivet kids to their seats...and if you could manage somehow to snag a DX contact for a little more than just a standard DX exchange, that'd really be something!
Why aren't we targeting educators? Amateur radio has tremendous potential for use in education, whether assisting in science classes (even if only providing a means of remotely-monitoring nifty things like weather experiments in Earth sciences classes), social studies classes (want to learn about what it's really like in Outer Patagonia? Try to set up a sched with a ham there to talk with your class!) or mathematics (using studying for an amateur radio exam as n avenue of teaching practical (and hopefully interesting) concepts in mathematics). I know the NAR (National Assocition of Rocketry--the largest interest group for model rocketry) has programs which specifically target educators with the idea of using model rocketry in the classroom to help teach such concepts as aerodynamics, newton's laws, etc. Does the ARRL or any similar organization have such a program? Do they *push* them, that is, make educators *aware* that they exist? Why not?
I see people asking, "Where are all the young people?" But when I look around, I have to ask in return, "What are you doing to go out and *get* the young people?" Face it: Unless *we* go out and make it interesting for them, we're not going to catch their attention in this decade of 30-second sound bytes and MTV videos. I think it's "73" that has the blurb on their contents page which goes something like, "By reading this, you're agreeing to introduce one young person to amateur radio in the next month." Well, I earned my license 4 months ago, got it in the mail two months ago. In that four months, I've gotten three young people interested in amateur radio.

I challenge each and every one of you to do the same.

73, Doug N0YVW

BTW, as a very technologically-oriented group of people, we Internet-hammers are in a unique position to snag young people, to snag college freshmen, to snag bright new minds coming into our companies. Let's not blow it!

Absolutely correct, and what I said in my second paragraph when talking
about measurements at the antenna. All you get is a number that can be
translated into the absolute value of the complex impedance mismatch, not
whether it's resistive or reactive, or the sign if reactive. There are ways
of determining those things with the aid of a SWR meter, but it requires
you to vary another independant variable, frequency.

>Assuming a lossless feedline, the SWR is the same at all points along
>the line.

No real line is lossless, though some lines are much better than others.
Lossless lines aren't required, but knowledge of your line's characteristics
is required.

Source record: 273097

All,
I'm in the process of trying to get on AMTOR (and hopefully
PACTOR once I get the FW upgrade from MFJ) and have had problems
while using an Atlas 350 (or 210). I can't seem to link up with any
stations on 20 while they're calling CQ (FEC B). I suspect it's the
AGC timing of the Atlas (which is not externally defeatable). Can
someone tell me if this is common on old rigs due to their slow
response time?
(BTW, I have no problem copying mode "A" or "B" transmissions in
"monitoring" mode, using an MFJ-1278 TNC, running rev 3.3 FW)
Thanks

5420. Order Pizza by Internet

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-18 20:52:21 UTC
From: randy@cyphyn.radnet.com
Message-ID: <1993Dec18.205221.5410@cyphyn.radnet.com>
Source record: 273326

Now that Amateur Radio can be used to order pizza, why not via the I-net too?

Originally the FCC rules about no commercial traffic was to protect Ham air
from being gobbled up by Commercial Intrests who'd get a Ham ticket and then
go do commercial transmitting.

Now, the rules are softened, to account for real world conditions-of-use, and
so if you had to call someone who answers on telephone with:

" Willies Wash House..." ... you won't be in violation about commercial
traffic!

So same, about 'incidental music' that may be hearable in the back ground
due to it being so loud (such as a ham covering a sports event as safty
spotter, and a band is there doing music)

The rules on music, were intended to prevent commercial BC stations from
using Ham tickets/ Ham air to broadcast with.

(ya sure! go tune in 40 mtrs at nite!)

The rules were softened to allow for that, too.
OK....sence that even includes the shorty music passages that come in with the
shuttle launches, its clear just what FCC really wants concerning
'commercial traffic'....NO FREEBIES via Ham air allowed for Commercial Intrests.

NOW..we have the problem of Internet traffic connecting up to Ham air...
Many amp.org sites and others, will reject any I-net mail being sent to a
Ham thats getting his/her mail via Packet..... because I-net is viewed as
'commercial traffic' !

Hey! wait a minute! There are ticketed Hams here! Whats going on?
You try to reply by mail (the approved way to use the net) and if it is
routed thru someone packet station..ZZZT! FAILED MAIL!
So same if someone ON packet mails TO an I-netter (even if BOTH are Hams)
So, a one way mail occurs, and after a while I-netters tend to reguard Ham-
sent-from-packet messages as unreplyable to, and have to adopt a policy of
'we don't want anything to do with em'...which defeats the perpose of one of
the aspects of Ham radioing....(talk to other Hams!)

Many of us, sick n tired of all the malicious qrm and crowding on the air; don't
dare do anything but CQ! CQ! CONTEST! CONTEST! ...can't have a tech discussion
without someone blocking you off....have turned to internet to carry out our
qso's ...like right here, in these news-groups and much of the resulting
private mail it generates.....or WOULD generate...

...AHH! but only if it's between 2 I-netters and no packet-people are involved.
Can't send packet-people any mail. nope!

So...somewhere, someone has to make clear what traffic is to pass, make it uniform everywhere, so that everyone can set up accordingly to jive with the system...which ever it's going to be:

-> Let I-net email back to packet-people as 3rd party traffic *

-> 100% cut the 2 apart and so avoid all the bugs...remove temptation to even try at all

...none of this one way jazz.Thats for the birds...and besides, it would violate the rule about one way transmissions! :)

* obviously, the sent-text would have to be as per the rules about by & for Amateur perposes only

Your probably not going to have too much luck with VHF/UHF equipment for reliable communication. Alaska is fairly desolute up north with villages and sites sparsely located. I would recommend an HF rig. If it's summer probably stick with freqs on 15 or 20 meters, if winter, stick with freqs in the low bands (And bring warm gloves, -60, -70 is not uncommon!).

Bid : $RACESBUL.305

TO: ALL ES, CD, AND PUBLIC SAFETY DIRECTORS VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CALIFORNIA
INFO: ALL AMATEUR RADIO OPERATORS
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6SIG@WA6NWE.CA)
2800 MEADOWVIEW RD., SACRAMENTO, CA 95832 916-262-1600
LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL 305 December 20, l993
Subject: MGT Observations 1/3

Bulletins 305, 306 and 307 resulted from a five-state RACES tour in September by Stan Harter, State ACS Coordinator:

When I started this tour I had in mind the comment we sometimes hear from out-of-state that "the RACES Bulletins don't apply to us because nothing ever happens around here. Or because everything always happens out there in California".

Driving along the highway's I found myself musing, "it's no different in California. Throw a dart at the map of California and it's safe to say that somewhere that is a jurisdiction that says that hardly anything ever happens here, too. Given the variety of state, county and municipal governments there is bound to be somewhere that events seem to skip by and officials consider it unnecessary to plan for communications emergencies. Not all of the hundreds of jurisdictions in California have a RACES program if they feel that they cannot justify the use of the RACES and other volunteers in government service.

Fortunately, there is a work-a-round in an emergency for which they are unprepared. What then happens is that they reap the benefits of mutual aid, neighboring governments helping neighbor governments; which includes paid and volunteer staff ready, willing and able to work in other jurisdictions than their own when requested and authorized.

Even so, however, there are places where neighbor helping neighbor seems to fall down. In one area I was appalled to learn from a deputy sheriff search and rescue coordinator that he is subject to arrest if he sets foot in a particular neighboring county on a SAR mission. In any language, that's hard to take. To a lesser degree one occasionally hears something similar in communications, where more enlightened and intelligent volunteers suffer such restraints and sometimes throw up their hands in disgust and take there desire to serve elsewhere.

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races
and can be retrieved using FTP.

5427. Where are all the young enthusiasts?

Newsgroup: rec.radio.amateur.misc

>I've just finished reading a slew of messages on this subject, but there's a
>perspective that they all seem to have missed. I read disappointment that we
>can't get young folks interested in building radios, and lack of surprise at
>this given today's market.

Maybe it's because if you really have an interest in building radios, you go to school, get the degree and end up working at some place like Collins or Harris and get paid (well, i'm told it's just as good as money) for it. Radios are NOT designed by seat of the pants techniques if at all possible. having a "Gut Feeling" helps, but you usually don't get paid for using only that technique.

What's really sad is the folks dreaming of the romance of the crystal set. Yeah, it's neat, but when did Armstrong come up with regeneration or the superhet? (start planning that 75th anniversary today...) Maybe the crystal radio set diagram should be stricken from "Now You're Talking" ...

Yeah, it's neat to do a "no power" radio or one run by potatoes, but once you've seen it done, that's it. It's a curiosity in itself. All the other radio equipment the modern homeowner has is superhet (well, maybe not the Garage Door Opener...8)).

What's missing is:

it's fun and you can have fun doing it. did i forget to mention that amateur radio is fun?

telling folks that dabbling around in something related to what you are interested in can help later come job time...it's usually a good thing to hear that a prospective employee is into something like building up his own stereo or is an amateur radio operator or works on his cars rather than just a guy that did the time in school and got the grades. and it's fun.

letting the kids get involved. this is basically stop treating them as kids. kid's got an Extra and has the time to be the net manager and seems to want to do it and do it right, let him. we have to shake out people that want to keep trying to set an age=experience rule for amateur radio...it's more like time in service=experience but many with the time also think other they meet that are the same age have the lifelong involvement with radio they had themselves. Just the other day a guy with probably 30-40 years under his belt was complaining about the other silver-haired folks in his radio club didn't know some archaic bit of trivia from the 1950s. but the folks he was complaining about, while probably totalling a couple of centuries of experience in age, don't even make QCWA if you doubled

their radio license time. but he's not having fun...

the adults have to be able to tolerate the kids. I can, but i've heard some of the grumpy old men carry on about people half their age (like 35...) and that's a turn off. kids can do lots of things and one thing on the list not to do is anything where people complain about you showing up. Hey! No problem. we'll hang at the mall where we only have to worry about the Mall Rat Removal Service...and it's fun avoiding the security forces.

Once you get a kid involved, you have to get him doing things.
It is a concern if the people getting licensed never get on the air or active in the hobby. this is a flaw with the "get all the oldsters since they have time" campaign. did they get into it to do something or were looking for something to do and would just as well be out boating or bowling instead?

how's that?

>types of service available out there.

Hi Gary!

My 5 cents on pagers as I understand them:

1. Message format:
a. Tone only. Pager beeps when activated. Cheapest option.
b. Voice. Pager unsquelches when activated, allowing one to hear garbled audio of original sender.
c. Numeric. Sender's DTMF digits scroll across a small LCD display, and optionally kept in memory for later recall. Can usually beep, often vibrate or poke, some times flash--all of this to get your attention.
d. Alphanumeric. Sender's text scroll across a larger LCD display, and again, optionally stored. Most expensive option.

2. Addressing format:
a. Two-tone: Originally two low frequency (>300 Hz) reeds resonated to detect a page. Original "Code Access Plug", or CAP. Restricted unique pagers available to paging company to sell to thousands.
b. Five/six tone: As above, however increased unique range available.
c. Digital:
i. POCSAG: format arrived at by British Post Office for Standard Radio Paging Code. Essentially 32-bit FSK codewords with 2^18 unique addresses and 2^2 function codes. Supports all messages formats. Known in Canada as "RPC-1." For the most part, the address, or CAP code is re-programmable by the air-time vendor.
ii. GOLAY: another digital format, I don't know much about.
d. Speeds:
512 (mature) 1,200 (most) 2,400 (alpha-oriented) 4,800 (newest) signal changes per second (bauds). Most are NBFM, 4.5 KHz deviation.

3. Distribution Techniques:
a. Point source: for limited coverage (in-house) systems. Cheapest.

b. Simul-cast: Several slaved remote transmitters, through the careful control of delay, all transmit the same information at the same time. Much wider coverage.
c. Networked: Multiple cities connected through leased lines exchange information for delivery via a or b above. Up to continent coverage.
d. Satellite assisted: Master information is uplinked to a "bird" for delivery by a or b above on one or more continents.

4. Bands:
a. Vhf mid (say 140 MHz) and high (say 170 MHz) +- 15 MHz or so. Most popular band, heavily used. All expansion is in PRC or similar area, as urban North America is already crowded. Vhf low (say 40 MHz +- 10 MHz) appears "mature."
b. Uhf mid (say 460 MHz) and high 940 MHz +- 10 MHz or so
Area of most growth now.

5. Physical:
a. Really old units are 6" high by 3" wide by 1" deep and take huge batteries--1" diameter by 2.5" long. I picked up a Motorola "Page Boy" for free at Dayton hamvention when I bought an accompaning Uhf power amp.
b. Modern numeric are roughly 2" square, 0.5" deep, and usually take 'N' or AAA cells. Cells should last about a month. Thin units are credit-card sized, roughly 0.25" thick, and take Silver Oxide or Zinc-Air cells. Minature units are formed like a big watch, or a big fountain pen, that sort-of form factor. These can be had at Dayton for about $1.
c. Modern alphanumeric are roughly 3" long by 2" high by 0.75" deep. Most of the face is the LCD display and the rest control keys. No, I didn't see any for sale cheap at Dayton--yet!

6. Trade Journal/Association: Telelocator (My boss swears by it as The Fount of Information, and won't pass them around the office.)

Personal-opinion mode=ON;
Most popular pagers are digital ones. Cost $200 purchase plus about $10-15 per month (canadian). They use uhf band, 1,200 baud, pocsag, and a AAA cell. Your other choices are 1. nothing, 2. mobile text (RAM or ARDIS), 3. commercial 2-way, or 4. cellphone.

Advantages:
1. You know the number you to dial by looking at it. Most have at least 20 digit by 4 memory. Numbers can be reviewed, locked and deleted.
2. Communication is one-way. You know who likely paged you by the number, and whether you can safely defer responding. Easy to have a computer page you with "ATDT" strings.
3. You can know that somebody can "put the touch" on you almost anywhere, except deep in the bowels of a computer-oriented company. This includes the freeway, store, church, or when you need to get out of a particularly nasty meeting. (Heh heh heh!)
4. They are generally rugged compared to a cellphone. One colleague

went swimming with one, to his horror. Took it home, opened it up, dryed the thing out with a hairdryer "real well." Keeps working. I'd like to see a cellphone do that!

Disadvantages:
1. Sending a page eludes some people. ("Touch tones? I talked, and the nice lady said 'thank-you'. Why didn't you return my call?")
2. Communication is one-way. You have no way of knowing if the pagee got it, and when. As the paged, when you call back, they're never at the dam number they sent. ("You took to long." "It was a pay phone." "I fixed it myself." "How did I know the phone was forwarded to Fred?" "Coverage out in the boonies, where you live, is spotty.")
3. The touch can be put on you almost anywhere. I think of Cliff Stoll's book... Sometimes, you want/need to shake the lease.

Gee Wiz:
1. The antennas in the beasts are a real compromise. On body, off body, severe fades, and maybe 4" of loop. Try and achieve -120 dBm sensitivity for 12 dB SINAD, 80%+ page rate. Ever wonder why the front and back of the little jobber radio shack sells is metal? It IS the antenna!
2. Power management is a big deal too. How many weeks straight can you run your radio and computer on 1 AAA cell? The trick is to get the AVERAGE current down to micro amps, duty cycles to no more than a couple of percent, peak currents to milli amps, and run the thing as slow as possible (2 MHz cpu, direct conversion vhf radios, strobed displays, auto-power down, etcetera).

Personal-opinion mode=OFF;

Hope that helps you folks getting pagers. My limited experience comes from trying to write the kernel for one--so I'm biased--but I think I've layed a reasonable groundwork for others to fine tune. (Probably at a Grade 8 level, though. Sorry, Gary! :-)

73, Gord.

VK2SG RTTY DX Notes, 17 December
VK2SG RTTY DX Notes for week ending 17 December 1993 (BID RTDX1217)

I MAY CHRISTMAS AND THE NEW YEAR BRING
ARQ THE VERY BEST OF EVERYTHING...
AMTOR MAY HEAVEN SMILE ON ALL YOU DO,
DIGITAL BUT MOST OF ALL,
XXMODESXX MAY GOD BLESS YOU !!!
RTTYXBAUDOT
AMTORXXCLOVER MAY THE CHRISTMAS SPIRIT WITH THE
PACTORXXXPACKET SWEETNESS, WARMTH AND CHEER, LINGER IN YOUR
EDI LIFE AND MAKE IT BEAUTIFUL ALL YEAR
TOR
------------- MAY THE 1994 BE PEACEFUL, PROSPEROUS
VK2SG, I5FLN AND HEALTHY, AND HOPE IT WILL BE
WB2CJL, W2JGR BETTER THAN YEARS THAT HAVE PASSED
-------------

Following a question from Joe, ZS5S I remind you all that these notes
are not only for old fashioned RTTY, but also for the newer modes like
Amtor (ARQ), Pactor (PTC), and Clover (CLV). Reports from these modes
are greatly appreciated.

Our information this week came from ZS5S, W2JGR, WB2CJL, SP5AA, CT1XK,
I5ICY, DJ3IW and the Central Eu DX-Cluster node DB0SPC, and NJ0M node
ofthe Twin Cities DX Packet Cluster. Thank you all.

Notes Of Interest:

The ARRL Awards Committee on 14 December concurred with the recommendations of the DXAC, and established a RTTY HONOR ROLL encompassing all digital modes. Qualification for this new award is same as for Mixed Honor Roll, 318 current (not deleted) countries. >From Jan. 1, 1994 with addition of Eritrea the level will rise to 319 countries.

BURKINA FASO. Those still needing that one remember that Peter, XT2BW will be QRV from there til the end of January, 1994.

GHANA. After leaving Burkina Faso, Peter will move to 9G with his family for a 3 month vacation. He will apply for a license trying to be QRV whenever time permits.

PACIFIC TOUR. Akio Shimizu, JA3JM/AA5K will be touring Pacific Islands from 20 Dec.to 5 Jan. with the following planned stops: AA5K/AH8 20-23 December; ZK2XJ 24-30 December; ZK1AJM South Cooks 31 December-2 January; 5W1AS 2-5 January. He will be active all bands 10-160m, CW/RTTY/SSB running 100w. QSLs to JA3JM.

Send your Bandpass and Notes for next week to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ ZS5S.ZAF.AF.

VK2 Council meeting, 17 Dec 93

Here is a report of a Council meeting held at Amateur Radio House on 17th December, just before the scheduled ATV meeting. The Council meeting was requested by at least four Councillors (although only one such request is necessary to hold same).

Present were: R.Yorston VK2CAN, C.Miranda VK2TCM, R.Henley VK2ZIG, T.Mills VK2ZTM, T.Ryeland VK2UX, R.Harrison VK2ZTB, and J.Kentwell VK2XBR; neither J.Simon VK2XGJ nor J.Robinson VK2XY was in attendance. The meeting was chaired by the President, Terry VK2UX.

A motion of "No Confidence" in the Divisional Secretary (VK2ZTB) was moved and seconded, and was hotly debated. Many points of order, including at least one Motion of Dissent, were raised; they were ignored or overruled by the Chairman. Both the mover and the seconder spoke at length for the reasons for moving such a motion of no confidence; the Secretary and another Councillor spoke against the motion.

At some time, proxies were produced (allegedly from VK2XGJ and VK2XY); their legitimacy was questioned as, amongst other things, it was not clear whether these proxies had been lodged for the required four hours before the meeting, or whether they had been witnessed etc. Again, various points of order were raised and ignored.

The meeting adjourned and reconvened somewhat later. Discussion continued, and when it became clear that a vote was forthcoming, the President raised the matter of the proxies, and attempted to declare them valid. Again, there was some discussion on whether the proxies had been delivered in time, and whether they had been witnessed, etc. Again, various points of order were raised (including at least one Motion of Dissent), and again were either ignored or ruled to be out of order. A motion that the motion be put was ignored.

Finally, following a motion that the proxies be declared invalid, the Chairman adjourned the meeting (whilst the aforesaid Motion was still upon the table) - ignoring the protests of other Council members - and the President and the Secretary departed amidst expressions of derision from the audience.

NOTE: The Effective Sunspot Number for 17 DEC 93 was 36.0.
The Full Kp Indices for 17 DEC 93 are: 3o 3+ 3- 3+ 4- 3o 3+ 3-

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7635 (N02E25)
produced a moderate duration B3/SN at 18/1533Z. A small B-class
group emerged at N12W53 and was numbered as Region 7638. Yohkoh
x-ray images are showing a moderate enhancement at the northeast
limb where old Region 7624 is due to return in two days.

Solar activity forecast: solar activity should continue
at a very low level. There is a remote possibility Region
7635 could produce another long duration C-class flare as it
did on 17 Dec.

The geomagnetic field was mostly quiet to unsettled.
Isolated active conditions were experienced at mid and high
latitude sites at various times.

Geophysical activity forecast: the geomagnetic field
should become active on 19 Dec in response to a disappearing
filament observed on 14-15 Dec from the southwest quadrant.
Unsettled to active levels are expected on 20 Dec with
primarily unsettled conditions forecast for 21 Dec.

Event probabilities 19 dec-21 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 dec-21 dec

A. Middle Latitudes
Active 30/30/25
Minor Storm 20/15/10
Major-Severe Storm 05/05/01

B. High Latitudes
Active 35/30/25
Minor Storm 20/15/10
Major-Severe Storm 10/05/01

HF propagation conditions were below-normal over the high
and polar latitude paths. Middle and low latitude paths saw
generally near-normal conditions with periods of minor signal
degradation during the local night and sunrise sectors. No
significant changes are expected over the next 48 hours,
although some weak improvements may begin to be observed on
about 21 December. The weak state of the ionosphere coupled
with the minor solar disturbances which have arrived over the
last several days will maintain periods of night-sector signal
degradation and lower than normal MUFs over all regions.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I don't think the commercial aspect of it is what's important.

[...]

>Hey! wait a minute! There are ticketed Hams here! Whats going on?

Let's say I send clearly commercial mail from my Internet account to you on
your packet account. Who has violated a rule? Maybe me, but certainly the
gateway operator. Why should gateways take that risk, or take the time to
read every message that goes through?

[...]

>So...somewhere, someone has to make clear what traffic is to pass, make it
>uniform everywhere, so that everyone can set up accordingly to jive with the
>system...which ever it's going to be:

"has to"? Who says?

[...]

>* obviously, the sent-text would have to be as per the rules about by & for
> Amateur perposes only

And that's the problem. Gateway operators don't know. It's not clear, I
think, whether I would have violated FCC rules if I sent you an illegal
message originated in the Internet. What if I thought it was going to an
Internet account but you had set up an auto-forward file to packet? What
if a non-ham sent such a message? They don't have a license with terms to
violate.

Source record: 273209

After trying to record the audio from the last few broadcasts of
shuttle-ground communications by WA3NAN, having a recorder capable of recording
at a much (4 times or greater) slower speed than the usual mini-cassete
standard speeds is looking
like a decent option. Does anyone in the group have experiece with
such recorders? Any firms dealing with such recorders?

My preference is to a recorder of a walkman-type design, recording at a speed
of 5 times or slower than normal (10 hours on a 120 minute tape). I have
seen one similar design, but it recorded at 4X slower than normal.

News on any other designs (there seems to be VERY few of them available) would
be appreciated.

Thanx,
R. Camama

Is there a White Pages service reachable via telnet somewhere? I know
about the callsign server, but that doesn't provide the same information.

Is there a BBS I can telnet to? THere are some BBS's that work via mail,
but telnet would be much better.

: |> itivity. Any information on how to get this radio to perform to optimum
: |> capacity would be appreciated. Please respond in mail rather than posting.
: |>

: Posting this here is like walking into a cop bar and asking directions to
: the local crack house...

Tom,

I think you may have misunderstood what the poster is asking. He
doesn't want to exceed the legal power limit, he just wants to have
the rig "peaked" right up to the limit. (To avoid testing and
adjusting every single rig they make, manufacturers allow for
component tolerances etc such that the all the rigs they make are well
within spec. The means that the majority of rigs are quite a bit
below spec on power and mod.)

"Peaking" is a perfectly normal procedure. Any reputable repairman
will do it for a small fee, or perhaps for nothing if you are having a
repair done at the same time.

PHASE-3D STATUS REPORT!

HR AMSAT NEWS SERVICE BULLETIN 351.01 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 18, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-351.01

The Phase 3-D Project Shifts Into High Gear

Following a series of meetings both in the United States and Germany involving key members of the International Phase 3-D Project Development Team, work on construction of the new amateur satellite is moving forward at an accelerated pace.

On December 11th and 12th, Hanspeter Kulen, DK1YQ, along with Dr. Karl Meinzer, DJ4ZC, AMSAT-DL President and Phase 3-D Team Leader, hosted a key meeting of the project's international participants near Munich, Germany. AMSAT-NA's Vice President for Engineering, Dick Jansson, WD4FAB, and Dr. Tom Clark, W3IWI, AMSAT-NA's President Emeritus and a key member of the Phase 3-D GPS experiment group, were also in attendance. Both Dick and Tom report that all phases of the project are "on track" for the expected launch of Phase 3-D in 1996.

"Each country's team is performing their assigned tasks very well," said Jansson on Dec. 13th, soon after his return from Germany. Clark observed that, "we are really pulling together as an international group." He went on to note that, "thanks to the work of our European, South African and Japanese friends, it now looks like we'll have some superb cameras, some really 'hot' receivers and some very powerful transmitters on Phase 3-D when it's launched in 1996." Specifically, Dick mentioned that Mike Dorsett's (G6GEJ) effort's on the spacecraft's 2 Meter transmitter are right on schedule and that Mike's proposed construction approach has already met all the key design parameters.

During the Munich meeting, Jansson was presented with a token of appreciation by Dr. Karl Meinzer for his outstanding contributions to the project. Karl cited Dick's superb design work on the Phase 3-D structure and thermal control system as well as his tireless efforts in support of the overall international project.

Just prior to his meetings in Germany, Jansson met with both students and faculty members from AMSAT-NA's team at Weber State University in Ogden, Utah. Weber students are now in the process of building the flight model structure for Phase 3-D. Dick reports that this vitally important portion of AMSAT-NA's role in the overall effort is "also on schedule for delivery

of flight hardware next June."

Other major contributions by AMSAT-NA to the project in the coming year will include the purchase of the spacecraft's heat pipes, solar panels and flight batteries, as well as final construction of the spacecraft's GPS positioning experiment, antennas and propellant flow hardware. In addition, yet another group of some 15 dedicated volunteers have now been assembled in the Orlando, Florida area. These people are already in the process of both securing and preparing the spacecraft's final integration facility. This team will also assist other project team members with integration activities beginning in mid-1994.

Jansson concluded by saying, "there is still a lot of work left on all of our plates between now and 1996." He also had high praise for the many volunteers now working on the project. "The ongoing work of our volunteers is of high quality, and is much appreciated. Without their selfless efforts, the Phase 3-D project simply would not happen." Jansson said.

K6OYY Passes Along Some Information About KITSAT-OSCAR-25 (KO-25)

K6OYY has received an informative message from Mr. Hyungshin Kim of SaTReC/KAIST in Korea. Mr. Kim reports that the KO-25 images are not currently on KO-23, but that they will be available on KO-25 when its BBS is opened up sometime next year.

Currently images on KO-23 have the designation KAIWxxxx or KAINxxxx depending upon which imaging system was used; images from KO-25 will have KBIWxxxx or KBINxxxx as file designations.

In response to K6OYY's inquiry, Mr. Kim also indicated that it is possible for amateur experimenters to process the COLOR images from KO-25! He further stated that the designer of the KO-25 color CCD camera is preparing an article on how to do this.

KO-25 continues transmit strong signals with good modulation quality as received here by K6OYY at Santa Barbara, CA QTH. The Kitsat Team is very busy at the moment conducting experiments with the various systems on KO-25. Mr. Kim reports that one of his collegues has been asked to prepare an article for the AMSAT publications.

[The AMSAT News Service (ANS) would like to thank Jim Shepherd (K6OYY) for the information which went into this bulletin item. For those on who live near the Santa Barbara, CA area, K6OYY is the 75M AMSAT West Coast HF Net Control Station. Listen for K60YY on 3840 KHz every Tuesday night at 8:00

WA6ZVP Explains Working One Of the Russian Cosmouauts Aboard MIR

WA6ZVP noting one morning this past week that during a MIR pass on the west coast would provide him a good pass for a visual sighting. Getting up just as the spacecraft came above the horizon, he had noted again that the AOS time was about 3 minutes or so before it would pass out of the earth's shadow. With his receiver set to 145.550 MHz, he started to hear the normal packet traffic.

Just as WA6ZVP was about to go outside his house, he started hearing voice traffic but at first thought it was just some of the Los Angeles "locals" going QRMing the frequency and complaining about the packet traffic.

Much to his surprise, however, when WA6ZVP turned the volume up to hear the voice of a cosmonaut speaking broken but very understandable English. The cosmonaut was in a QSO with another station which could not be hear locally or from a mountain top remote.

During the 5 or 6 minutes that I heard him, he did not identify so I don't know what call he is using. Presumably it was R0MIR. The best that WA6ZVP can recall, the cosmonauts have not been on voice for over 4-6 months.

For all those wishing to work R0MIR, please listen first before transmitting packet. As in the case of WA6ZVP, you might be suprised!

[The AMSAT News Service (ANS) would like to thank Roger Wiechman (WA6ZVP) for this bulletin.]

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955

MHz.

Date UTC Mode Phs NCS Alt NCS

3-Jan-94 0200 B 160 WA5ZIB N7NQM

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate NCS do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

5441. Frequent 2m Frequencies needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-19 19:48:49 UTC
From: feliccia@mothra.syr.edu
Message-ID: <1993Dec19.144850.5669@newstand.syr.edu>
Source record: 273217

WHAT ARE THE MOST USED 2M FREQUENCIES

Hi there everybody.

I just put a New 2M mobile set up in my Car a Yaesu FT 411.

I am planning to take a trip across several metropolitan regions
and really don't want to be distracted from band scanning by getting
hung up on intermods and carriers and so forth, so I was wondering;

A LONG time ago i saw posted on here a list of the most used 2m
repeater frequencies in the country; Maybe it wasn't on here
or maybe it was on QST. Wherever I remeber it I am sure that such
a list exists out there and I would like to know if anyone
could send it to me.

5442. DX Activity

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-19 21:22:43 UTC
From: gaus@islandgirl.crd.ge.com
Message-ID: <CIAwpv.II6@crdnns.crd.ge.com>
Source record: 273219

Hello fellow DXers,

I have been disappointed at not hearing much activity on 20 meters lately. That goes for much of the other high frequency bands as well. I miss hearing good signals coming from Europe especially.

Has anyone else had similar experiences? Does this mean we have to wait until about 2002 to hear something? Gee, what am I going to do 'til then?

An idle fist,

Rick Gaus
WA3INC

5443. KH6SP Re-Activation

>>>>>>>>>>>>>>>>>>>>KH6SP Full Time Re-Activation<<<<<<<<<<<<<<<<<<<<

Efforts are now underway to restore KH6SP, the Naval Amateur Radio Club of Pearl Harbor, as a full time amateur radio club. The club will tentatively begin operation in early 1994. A permanent location has been secured on Ford Island in building 76 (Ford Island Medical Clinic) - a historic WWII Pearl Harbor site. Current plans are to set-up for 2M packet and limited HF operation in March 94. Club membership will be open to all active duty, reservist, retired military, and their dependents.

A meeting will be scheduled for early January to elect club officers and establish a charter. Persons interested in becoming a member or donating equipment are urged to contact WH6OI (Bruce Carleton) or WH6OH (Brett Collars) at the addresses below.

As the club will NOT be funded by Morale, Welfare and Recreation (MWR) we are desperately seeking the following items for the club:

* members
* more members
* a 2M mobile xcvr capable of packet operation
* a suitable antenna for above
* a PK-88 or equivalent TNC
* 40-80 MB IDE hard drive
* 1 MB RAM (need 4 256K simms)
* other misc items (coax, connectors, etc)

For more information please contact:
Voice
Bruce Carleton 808-472-7394 (work) or 808-456-0423 (home)
or E-mail to:

5444. Elmer/ Tutor for Morse Code needed in Philly.

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-19 21:48:13 UTC
From: gsmlrn@gsm001.mendelson.com
Message-ID: <1993Dec19.214813.28095@gsm001.mendelson.com>
Source record: 273220

Hi,

I am one of those people who are "morsely chalenged". I have tried just about every legal method to pass the 5pw test. In order for me to learn, I need to have real QSO's with a real person. At this time I can receive, but I need several seconds to figure out what each character is. I can send about 5-10wpm, with some small spelling mistakes.

I am looking for someone to elmer or tutor me by having at least one hour a week of QSO's with me. It would start out with them sending a character and waiting for me to acknowledege it and eventually (I hope) working up to 13wpm.

I would prefer someone who would come to my house, or where I could come to them. I live in Chestnut Hill, (Northwest Philadelphia, Pa)

You need not have a license, just be able to send and receive code at at least 5 wpm.

We could also use the telephone, or if you do have a license, 2m, 430, 6m mcw or cw. I may be able to provide the equipment.

I am willing to trade elemering in theory (novice/tech/general), computers, custom programming, or if you come to me, cash.

Thanks and 73.

Geoff Mendelson

SB DX @ ALLBBS $OPDX.140
Ohio/Penn DX Bulletin No. 140

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 140
BID: $OPDX.140
December 20, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, 4X4NJ, G3NUG, SV2WT, NA2M, WA2UDT, K4CEF & Southeastern Cluster Group, N4VZ, KY7M and ARRL DX Bulletin for the following DX information.

1B, NORTHERN CYPRUS. Igor, KU0J, is now active as 1B/KU0J. His length of stay is unknown at this time. He was heard operating mainly on CW on the following bands: 80 meters at 0230z and 0330z, 40 meters between 1930 and 0330z, 20 meters between 1700 and 1800z, 17 meters between 1300 and 1430z and 15 meters at 1400z (All bands on various frequencies.) QSL via home call.

4X, ISRAEL. Riki, 4X4NJ, is active on 160 meter almost daily operating CW for QSOs with North America. He can be found on 1832 kHz (sometimes QSYing between 1830-1835 to avoid QRM) about 15 minutes before his sunrise until 5 minutes afterwards or later depending if the band conditions last. During the pileups, Riki usually listens "1 up" or sometimes just up. Riki needs only Zone 2 on 160 meters to have worked all the zones.

9M2, WEST MALAYSIA. Neville, G3NUG, will be active from three islands off the west coast of West Malaysia during January/February 1994. His callsign will be 9M2/G3NUG and he prefers the frequencies 14260 and 18140 kHz (both +/- 5 kHz). Look for him on: Pangkor Is. (AS-072) from January 14-21, Langkawi Is. (AS-058) from January 22-28 and Penang Is. (AS-016) from January 29 to February 10. Neville mentions that there has been no activity from AS-072 and AS-058 for about three years. All direct QSL request will be cleared by the end February. QSL via CBA.

9N, NEPAL. Kiyoko, NH6RT, is now active from Kathmandu. She will be there for another year or two. She is reportedly one of three new stations licenced in Nepal (9N1HA and 9N1HP are the other two ststaions.) There has only been one report from the UT4UZ and UB4LRQ DXpedition team. 9N1UZ was heard on 7009 kHz at 0130z calling "QRZ USA".

9X, RWANDA. Paul, F6EXV, and a friend, are currently active as 9X5DX and 9X5CW, respectively. They are working in the telecommunications field for the UN, and are currently in 9X5 on business. They reportedly are using commercial equipment there, and are unable to work split at this time. They will be active as time permits, but no word on their length of stay. Another source reports that Paul will be operating from here for three months, and that he does expect to have a ham transceiver soon that will have split capability. Meanwhile, Paul and his friend have been heard on 17 meters (around 18135 kHz) at 1530z.

A7, QATAR. Chris, A71CW has been heard on 160 meters (around 1831 or 1834) between 2200 and 2300z (one report as late as 0125z). He has also been heard on 80 meters (3511 kHz at 0310z and 3800 kHz at 2240z). QSL to Chris Dabrowski, P.O.Box 22101, Doha, State of Qatar, Asia.

C6, BAHAMAS. Bill, WA2UDT, will be active from Great Abaco Island (NA-080) from December 22-29. Using the call sign WA2UDT/C6A, he plans to concentrate on the WARC bands.

HS, THAILAND. Reiner, DL2VK, is now active as HS0/DL2VK until January 31st, 1994. He will be active on all modes (mostly on CW) including PACTOR.

SILENT KEY. Well known DXer Lloyd Colvin, W6KG, has become a Silent Key while in Ankara, Turkey. Lloyd with his wife, Iris, W6QL, has activated many DX countries through the years, suppling a new one for many DXers world-wide. DXers of the world will sorrowly miss W6KG because he will be known as "One of Legends of DXing". OPDX and the DX coummity would like to send Iris, their deepest condolences.

SU, EGYPT. Mohamed, SU2MT, has been active on 160 and 80 meters. Listen for him on 3799 kHz between 1400 and 1500z and on 1840 or 1845 khz around 1930z. QSL to Mohamed Tartousleh, 496 Horeya Str., Bulkely, Alexandria, Egypt.

YJ, VANUATU. Rudi, DK7PE, who has been active this past weekend as from Solomon Islands as H44/DK7PE, will be active next week from YJ-land. There is no further information on his call sign or operation from here.

SV/A, MOUNT ATHOS. GOOD NEWS! Niko, SV2WT, has informed OPDX, that Monk Apollo is active again on the HF bands and would like to be active on most DX nets. Niko says, "For more info stay tuned to the OPDX bulletins".

XZ, MYARMAR. There were two spots reported on a XZ4TA active on 14018 and 24895 kHz between 1630 and 1730z. There were no other details to report, but "Work First and Worry Later" (WFWL).

ZS9, WALVIS BAY. The ZS9DX Dxpedition that was to start on December 10th, was cancelled due to transportation problems. ZS6BRZ states he hopes to have an operation out of Walvis Bay before it is handed over to Namibia.

"HAM RADIO AND MORE". Lee, KY7M, informs OPDX that this new weekly radio show on the "Talk America Network" (TAN) is hosted by Len Winkler, KB7LPW. "Ham Radio and More" is broadcasted nationally on over 80 stations

around the USA. Lee (who sometime co-hosts with Len) does a two minute segment on the show called, "Weekly DX Update". The segment is based on information from OPDXB, QRZ DX and ARRL DX Bulletins. DXers around the country can listen for the show on their local TAN affiliate, Sundays at 2300z. This past Sunday (Dec. 19) they had a special DX program featuring Ralph Fedor, K0IR, from VP8SSI and a member of the upcoming Peter I DXpedition. Call TAN at 508-460-0588 for information on their nearest station that carries this broadcast.

DXCC ACTIVITIES. The ARRL Awards Committee voted 6 "YES" and 1 "NO" to accept an ARRL DX Advisory Committee (DXAC) recommendation to create an Honor Roll for RTTY DXCC. Qualification for this new Honor Roll is the same as for Mixed Honor Roll. For more details read ARRL DX Bulletin 68 (ARLD068).

EDITOR'S NOTE: I would like to wish all readers a Happy Holiday and a Great New Year. I also would like to thank the many who have contributed information to the OPDXB. Without their contributions of info, there would not be a bulletin. And a special thanks to my wife who takes time to be my chief proofreader. Lastly, there will not be a bulletin next week. Since the bulletin is written on the weekends, I plan to spend more time with my family during this holiday. I will do my best to have a bulletin for January 3rd..... 73 de Tedd KB8NW

KEEP THOSE BALLOTS COMING! Ballots for the Third Annual OPDX/NODXA DX Survey can be found in OPDX.137. Ballots can be sent to the following packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

5447. "Re: Long-play recording"

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-19 23:09:59 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9312192309.AA05266@cmr.ncsl.nist.gov>
Source record: 273221

I've been making unattended HiFi recordings of up to 8-hour duration for some 8 years now. The secret is VHS HiFi. Just plug your audio into the external audio input (eliminate the TVI) and you're on your way. The cheaper VHS HiFi VCRs have automatic volume control on the audio, I got one with manual audio gain because my application is musical recording. I normally use T-120 cassettes at the 6-hour speed ($7.97 for 3 at Giant), but use T-160 ($9.99 for 4 at Price Club) to get 8 hours.

Subject: Re: Where are all the young enthusiasts?
Newsgroups: rec.radio.amateur.misc
Organization: Evil Weather Machines LTD

It was those mostly grey and balding men, whose voices I heard on MY home
made short wave radio, that inspired me to be one of those voices myself...
errr...TRY to be one of those voices.

Yes, there is a lack of intrest, in home making anything...less reason maybe.
In order for a radio to be compatible to everyone elses, it has to be SO

high-tech, that one can't just go whip up a 1 tube rig and expect a whole lot.

Well....almost.....

Theres a very small bunch of us who still dabble with older technology, and
we stay in contact (now) via this Internet.
I have several 1 tube transmitters (all out on loan to those who can't get
over such a thing) of home made construction....and there are two young guys
who almost live here,now, who are making 1 and 2 tube rigs...one has a 3 tube
receiver we put together out of salvaged parts.
(you should have seen the look on his face when 1st turned on and he tuned in
on someone calling CQ)

Yah...things have changed.... but theres a few of of preserving the past still.

Its not gone....just well hidden under the noise :)

:
: [...]

Ok.. maybe not...

:
: >Hey! wait a minute! There are ticketed Hams here! Whats going on?
:
: Let's say I send clearly commercial mail from my Internet account to you on
: your packet account. Who has violated a rule? Maybe me, but certainly the
: gateway operator. Why should gateways take that risk, or take the time to
: read every message that goes through?
:
: [...]

well then, I guess any ham who comes in by packet, is gonna be missing a lot
e-mail then.

:
: >So...somewhere, someone has to make clear what traffic is to pass, make it
: >uniform everywhere, so that everyone can set up accordingly to jive with the
: >system...which ever it's going to be:
:
: "has to"? Who says?
:
: [...]

If it' s going to be where Packet Hams seeking Email replys, are going to
get those Email replys, ya can't just SORT OF look into it!
===

:
: >* obviously, the sent-text would have to be as per the rules about by & for
: > Amateur perposes only
:
: And that's the problem. Gateway operators don't know. It's not clear, I
: think, whether I would have violated FCC rules if I sent you an illegal
: message originated in the Internet. What if I thought it was going to an
: Internet account but you had set up an auto-forward file to packet? What
: if a non-ham sent such a message? They don't have a license with terms to

: violate.
:
: --

Ok, I see yer point.. Then I guess we ought to warn Packet Hams to not
seek Email replys.....

Too many I've seen in here, keep asking 'please send Email!' ... and it just
won't go!

The guy who maintains the Hams on Internet FAQ? I tried 3 times to Email
him to say thanks..he's doing a good job... and each time

CAN'T MAIL! MAIL RETURNED! ... I had to give up on the guy!

So, either we gobble up bandwidth by posting, or ignor all the Ham packets.

I'll go either way!

5452. Free access to the 3 Second Terrain Data Base is BACK!

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 00:33:36 UTC
From: rich@comm-data.com
Message-ID: <2f2rt0$s4q@cds.comm-data.com>
Source record: 273226

Well, it's back! A long time ago, I offered free HAM access to
perform point-to-point terrain profile. A lot of people
used it, it became a pain-in-the-butt of Communications Data Services,
and we killed the offer. But due to demand, and a few more modem
lines, we can once again make the offer.

Here is the deal:

Email me (rich@comm-data.com) a short (2 line will do it) note about
what kind of project you are working on -- just so I know it is
related to amateur radio -- and I'll mail you back instruction on
using the system. You get 5 accesses for the asking, and more with
a good argument. Right not you need to call our computer in Virginia.
If someone can help me figure out telnet "ports", I'll have it up for
telnet too!

FREE ACCESS TO THE US GEOLOGICAL SURVEY's / DOD 3 ARC SECOND
DIGITAL TERRAIN DATA BASE

You get a tabular list of distance and height (sorry - metric ONLY!).
Getting Fresnel Zone and 4/3 Earth is your problem -- at least for now.

Right now, I am only willing/able to let single terrain radials out.
If there are some interesting repeater coordination issues, or
some high-tech left-winged wild ideas about propagation and antennas
you want to talk about, please drop me a note. I have all kinds of other
toys, but they are a little more commercial -- I can run them for you
and send you the results or something like that.

Cheers.
Rich

5453. FCC Frequency Allocation data base

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 01:08:08 UTC
From: twright@freenet2.scri.fsu.edu
Message-ID: <2f2tto$o3g@mailer.fsu.edu>
Source record: 273079

Is the FCC Frequency Allocation Data Base available?
I know that the people who run paging and comercial radio sales have
this and its updated every 3 months by the FCC.
What it does is like this:

Freq: 158.790 lists everyone assigned on that frequency
. its like the frequency books you get at Rad.Shack but this is
either on Disc or CD ROM.

[Complaints about how expensive ham radio is deleted]
Sure, it is expensive if you go for all new stuff. Try looking at hamfests;
you can get great bargains there. I have recently picked up an Icom 2AT
for $20 (needs alittle work, but that just adds to the fun) and a pair of
Tempo HTs for $60. For HF, you can get a TS520 for about $300-350,
Heathkits often go for much less. For antennas, use a dipole (an old
extension cord) or a Hamstick ($16) on HF, or a 1/4 wave groundplane
(an SO239 and some coat hangers) or a Hotrod for VHF/UHF. For a TNC, get
one of the Baycom/PMP modems (or build one) or if you have a well-stocked
junk box, get the TAPR TNC2 bare board for $30 and stuff it yourself.

While it is nice to use the IC781 with stacked monobanders over at W1AF,
that is definite overkill for my home station. WIth a little inginuity,
you can set up a nice and functional station for a lot less than you think.

73, and good luck.

5459. Mod for Icom IC449A needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 05:06:43 UTC
From: n1ist@netcom.com
Message-ID: <n1istCIBI78.6Au@netcom.com>
Source record: 273084

Greetings. I recently picked up an Icom IC449A 440 MHz mobile rig, and have found out that you need to perform the 'Out of band xmit' mod in order to transmit in the 430-440 MHz portion of the Ham band. Unfortunately, Icom refuses to give any info on this mod, since it would also let you transmit outside the Ham band. The mod listed in the Pink Artsci book (or in the schematic supplied with the radio) doesn't match the actual PCB, and doesn't work. In my radio, only diode D5 is loaded. This setup is identical to that of the IC229H, but that mod (clip D5, add a solder bridge accros two pads) doesn't work. Any ideas? The serial number is 0171X if that makes a difference. Thanks.

Hmm. I've sent him mail, and he's gotten it. Perhaps there was something
else wrong somewhere. That's a problem with Internet mail - there are so
many possible points of failure.

!!END-DATA!!

NOTE: The Effective Sunspot Number for 18 DEC 93 was 43.0.
The Full Kp Indices for 18 DEC 93 are not available.

SYNOPSIS OF ACTIVITY

Solar activity remained very low. Current disk
regions were generally stable or declining. Minor optical
surging was visible at the northeast limb where old Region 7624
is due to return.

Solar activity forecast: solar activity should continue
very low. An isolated C-class event is possible from Region
7635 (N01E12) or from the east limb where several small
regions are due to return during the forecast period.

The field was quiet to unsettled. The filament related
disturbance did not begin at the time expected.

Geophysical activity forecast: the geomagnetic field
should be unsettled to slightly active on 20 Dec, unsettled
on 21 Dec, and quiet to unsettled on 22 Dec.

Event probabilities 20 dec-22 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 dec-22 dec

A. Middle Latitudes
Active 30/25/15
Minor Storm 15/10/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 30/25/15
Minor Storm 15/10/05
Major-Severe Storm 05/01/01

HF propagation conditions were normal over the low and
middle latitudes. High and polar latitude paths were
slightly below-normal with continued minor signal
degradation attributed to a weak ionosphere and sporadically
enhanced periods of geomagnetic and auroral activity.
Similar conditions are expected over the next 72 hours,
although gradual improvements in signal conditions should
take place over the next 72 hours for the high and polar
latitude paths as geophysical activity wanes.

5463. "Dr. Swanso" utility with Packet ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 06:53:01 UTC
From: RHAREL@FAB8.INTel.COM
Message-ID: <9312200653.utk2647@FAB8.intel.com>
Source record: 273087

I'd like to put together a system that would help blind and visually
impaired hams take better advantage of packet. Other hams in
the local repeater club could also benefit.
My idea is to somehow integrate the "Dr. Swanso" utility of
Soundblaster with a macro that would announce
callsigns in the Mail Beacon over the repeater every so often.
"Dr. Swanso" would read the text and convert it to voice
routed into the mic jack and would monitor the
'busy' led of the xcvr so as not to transmit while the
channel is busy. At any time, a user would be able to
hit a few touch-tones and "read" his mail. (At this point, the "Dr. Swanso"
utility would actually read the body of the subject and text).
Granted, not hi-fi but it works.
Has anyone on the net heard of others who have worked on similar
systems ? I want to build it around an 8051 controller card and initially
it will be a receive-only system. (Packet to voice).
I'd be happy to hear any feedback/ideas...

How do you charge them? Do you need a special power supply or something?

Greg says:

> Bear in mind, when you think about flying it anywhere, that you have
> a liability problem. You can't fly R/C, and be insured, except at an
> AMA sanctioned field.

No such thing as an AMA sanctioned field. There are AMA Chartered
clubs, and AMA sanctioned events, but no AMA sanctioned fields.

> I'd hope that if you're a ham you'd make use of your license and use
> the 50Mhz band.

But PLEASE when you want to upgrade your radio, DO NOT put it up
for sale on consignment in a local hobby shop. The hobby dealer
(unless he is a ham) does not care who buys it, ham or not.
Not long ago at our local field, there was a new fellow flying
the coveted black flag on his antenna (ham band xmitter). I strolled
over to have a closer look and identify myself to the new flyer.
After asking a few questions and discovering that not only was the
fellow not a ham, but also did not know he was on a ham band. I
mentioned that he should probably should not be using that radio
and may want to return it. Well, I found out what TEMPER really
can be. I dont think Ill do that again!

C ya. Jeff AC4ZO.

* *
* A Christmas present from the FCC. The commission says *
* that you will soon be able to choose your own call sign. *
* *
* *

FCC APPROVES VANITY CALL SIGN PLAN

The FCC says that amateurs should be able to choose their own call signs in the not to distant future. This, as soon as a new automated processing system is in place at the Commission's Private Radio Bureau license processing facility in Gettysburg, Pennsylvania.
Under the proposed system, hams wishing to apply for an available call sign will be required to file a form and pay an additional fee. Trustees of club and military recreation stations will be eligible for the new program.
But there is one caveat. Newcomers to the service will not be eligible for vanity call signs until they are ready to upgrade or make some other license change. The FCC says that at the present time call sign selection by first-time licensees is not feasible, but it left the door open for that possibility in the future. In fact, the FCC indicates that the new license processing computer might eventually allow amateurs to check for themselves on the availability of call signs, be used to allow electronic filing of applications and make licenses processing a lot easier for both the applicant and FCC.
The text of the Notice of Proposed Rule Making is not yet available but is expected to be issued shortly. Also acted on by the commission was the cancellation of a rule making procedure adopted last summer establishing a call sign administrator program for amateur club and military stations. This scheme was never implemented due to in-fighting between the ARRL which wanted exclusivity in managing the program and several other entities that saw the chance to gain political or financial advantage by undertaking the task.

*****
FCC PRAISES VEC's IN VE BUST

The FCC has words of praise for a pair of Volunteer Examination Coordinators who helped to investigate alleged testing irregularities in Los Angeles, California. As reported last week, the inquiry lead to the suspension of the accreditation of a number of Volunteer Examiners and the disqualification of twenty one applicants for new licenses or upgrades. That investigation is still ongoing, and more VE disqualifications are expected to be announced shortly.
In the meantime, the FCC has taken the time to express its gratitude to the Volunteer Examination Coordinators who made the bust possible. John B. Johnston, W3BE, who is Chief of the FCC's Personal Radio Branch has commended both the ARRL VEC and the W5YI VEC's for their joint cooperation in uncovering the irregularities in the Los Angeles testing sessions. He also praised them for their quick action in suspending the Volunteer Examiners believed to be involved. Johnston says that their action will hopefully prevent future occurrences like this, while making certain that amateur licenses are granted only to those who are qualified to hold them.

*****
FCC WARNING TO UNCOORDINATED REPEATER

For well over two years a Los Angeles amateur radio club calling itself the Hispanic Radio Amateur Network has been looking for a set of two meter channels for is wide coverage repeater. The system has been given several test coordinations by the Two Meter Area Spectrum Management Association. In each case someone complained and the test was canceled. So when the club finally found a home on 147.49 Mhz, they thought their long quest was at an end. Enter a group of simplex users 10 Khz away on 147.48. A group calling itself the Valley Simplex Association.

The Valley Simplex Association is actually the old Southern California 146.76 simplex group under a new name. Hams that have been involved in FM since the 60's know who the seven sixers are. Its the organization generally credited with bringing FM to the VHF ham and building a political empire in the process. An empire so large that at one time it totally controlled who could even operate the FM mode in nine western states. It even enforced those decisions with its own police force known as the seven six secret service -- or S.S.S.S.

In the old days -- the 1950's through the early 1970's, the seven sixers would simply have used bruit force to remove any unwanted repeater from being their next door neighbor. But its now the 1990's. Times have changed and so have the ways of the seven sixers.

So it was that members the Valley Simplex Association who filed complaints about the repeater with the Cerritos FCC office about the interference that they were suffering. Last September 10th the FCC acted on the complaints by sending a written warning to the repeaters owner Miguel Ramirez, NH2R.

In a letter only recently made public, Engineer James Zoulek wrote Ramirez that his office was continuing to receive complaints -- and we quote -- "regarding your non-coordinated operation on several amateur repeater frequencies."

The letter went on to say that it has come to Zoulek's attention that the NH2R repeater -- and again we quote -- "may be operating a non coordinated repeater on 147.49 Mhz." Zoulek said that the operation of a non-coordinated repeater must not cause interference to other radio amateurs as specified under Section 97.205, subpart C of the Amateur Radio service rules. He even went so far as to tell NH2R that failure to adhere to FCC regulations could result in the revocation of his amateur license.

As far as we know, this is the first time in well over a two decades that the FCC has seen fit to directly intervene in an alleged interference issue between a repeater and a group of simplex operators. Its may also be the first time that an allegedly uncoordinated repeater has been told by the FCC that it does not have the same right to exist as do systems that have

successfully gone through the voluntary coordination process. Right now, things are status quo. The NH2R repeater is still on the 147.49 Mhz frequency. The Valley Simplex Association is still operating on 147.48. As we go to air the FCC has not taken any further action in this case. Whether it acts or not, the warning letter to Ramirez may well be a precedent that the FCC will follow in other repeater related matters in times to come.

*****
CUBAN 3rd PARTY

Cuban dictator Fidel Castro is persecuting that nations radio amateurs who contact stateside stations even for emergency aid. This is according to Ramon Batista, CO8BA, Batista, formerly of Puerto Padre, is the Cuban expatriate ham who recently lead sixteen other Cuban citizens to freedom in the United States. On his arrival, CO8BA, speaking through SIRA President Rafael Estevez, WA4ZZG said that Castro appears to cracking down on Cuban hams. CO8BA wants the rest of the worlds hams to come their aid.
"One of the things he has in mind is asking help of American Amateur Radio societies in the United States and around the world. That's because there are more than 50 amateur radios suspended in Cuba. Just for the reason to ask for insulin, of medicines, simple communications. Of course they had been begging through different channels that somebody help them. And so far nobody has help them to try to talk to the Cuba Federation of Amateur Radio Operators. It is now lead by CO2PR, Pedro Rodriguez. Rodriguez was a former military man who was in Angola and fought for the Cuban Government over there. What they are trying to do is to discipline the amateur radio societies in Cuba." stated
Rafael Estevez, WA4ZZG, SIRA President.
This oppressed group of Cuban hams need your help to get back on the air. Batista says that a letter to your national society urging it to pressure the pro-Castro Cuban Amateur Radio Federation could go a long way in bringing this kind communications freedom back to Cuba's amateur radio community.

*****
24 GHz AWARD

The Radio Society of Great Britain has awarded its Standard Distance Award for 24 GHz to Bill James G6XM. James made contact from a portable site near Dartmoor with G3GNR on Exmoor over a 43 kilometers away. This is well in excess of the minimum of 23 kilometers needed to qualify for the award.

*****
IT AMSAT CRASH

After 45 days of uninterrupted BBS service, Italy's AMSAT IO-26 suffered a major computer crash at about 11:30 UTC on December 8th. The cause of the crash is still unclear. The Command Team is investigating some new software used to access the BBS services. In the past some other Microsats crashes were due to bugs found in the user software.
The IT AMSAT managers would like to receive reports about IO-26, especially regarding the presence of just the HDLC flags on the downlink or some sort of telemetry, either MBL or PHT style. With your help they hope be able to investigate on this incident. Send reports to IT AMSAT via normal AMSAT channels.

*****
DAYTON HAM OF THE YEAR

The Dayton Amateur Radio Association has set March 1, 1994 as the cutoff date for filing nominations for its highly coveted Radio Amateur of the Year, Special Achievement and Technical Excellence awards. Nominating letters must be detailed and include substantiating documentation. The Hamvention runs from April 29 - May 1, 1994 with the awards presented at the Grand Banquet scheduled for Saturday evening, April 30. To file a nomination or obtain more information please write to the Awards Committee, 1994 Dayton Hamvention, P.O. Box 964, Dayton, Ohio 45401.

*****
DX - PITCAIRN ISLAND.

In DX, this note to hams planning to QSL the recent special event operation where Pitcairn Island stations were signing VR6SLY. Address mail to the call sign of the station contacted, via Private Bag, Pitcairn Island, South Pacific Ocean, Via New Zealand.
Also, word that XE1CI, XE1ABA, and possibly other XE DXers will operate as XF4CI for the next two weeks. Nellis will be the first YL DXer to operate from XF4, and will operate SSB only. QSL all contacts via XE1CI.

*****
ARRL's MANSFIELD PROMOTED

Our congratulations to ARRL Public Information Manager Steve Mansfield, N1MZA. Steve has been named to replace the retiring Perry Williams, W1UED as the Leagues Washington Area Coordinator. Williams is to retire in April of 1994. Until then, N1MZA will prepare to assume the Washington area duties in addition to continuing on with his current public relations responsibilities.

Perfectly true Steve, but under US rules the work has to be done
by a licensed technician, not by the CBer. So asking for instructions
on how to make internal adjustments at home is where the problem arises.
Now in the perspective of the general lawlessness of CB, this is really
a reasonable request, but it got crossposted to the amateur group, and
that was inviting flames from the armchair lawyers. In truth, most
amateurs couldn't do this job properly to FCC specs because it requires
test equipment most of them don't have. Expecting a CBer to both have
the skills, and the test equipment, is a bit much. To do the job right,
you need a calibrated service monitor and a spectrum analyzer.

Source record: 273095
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,chi.wanted,chi.forsale

Heathkit SB100 with AC power supply, speaker and manual.

This rig works well on 80 and 40 meters; the driver or finals oscillate on 15 meters. It does not work on the Novice/Tech. part of 10 meters.

This rig was loaned to Doug Reneker, N9UIJ, who used it mostly on 40 meters, and made plenty of contacts from Illinois with it, as far away as Havana Cuba.

This is an all-tube radio, 1965-vintage. The manual is very detailed, and if you have the time, you could probably get it working on all bands.

I will sell it for $100. If you are in Chicago area, you can pick it up in Naperville for $75.

I was looking through the GOPHER a little while ago and came up with
post where someone has made a MORSE CODE program that runs on UNIX
boxes and its location.

Its located at HANAUMA.STANFORD.EDU <36.51.0.16> morse.shar is the
file name

I have never seen this posted before and according to the post ITS FREE
shareware.

Tim Wright KD4OVM

World.std.com has a program called superiormorse.shar in
pub/hamradio/unix/morse. I am working on acquiring more CW programs shortly.

Please feel free to visit the site via gopher, anonymous FTP, World Wide
Web, or any other way you know how to.

Also, the ARRL's info-server files are also available on the site in
pub/hamradio/arrl/Server-files.

73,
Scott

Keep in mind that since there isn't an external Antenna Jack, Sensitivity
in dBm is sort of useless. On the Pagers that I have worked on, sensitivity
(90 % Call Rate) is about 5 dBuV/m. Other than that, every thing else
looked reasonable

What if someone used a modified HT to transmit on the R/C frequency and jam the sucker until it crashed. Then who would be liable? I've seen people use Radio Shack CBs to jam those 27 MHz R/C cars. Knocks 'em dead from a long ways off! Of course, I wouldn't ever do anything like this myself but can you imagine the look on the guys face when his $$$$ plane flys off into the sunset....or into the ground? :'/

Source record: 273099

I am too, sort of. I am 33, and have been licensed since 1983. I was enthusiastic at one time, got my Extra, got lots of equipment, but also have a family and a job. I would love to experiment with digital modes at 902, but I have to be content to make the multi-DSP card work before Christmas. Besides, I get paid for making the card work so I may be able to buy radio "goodies".

I have been interested in radio since the next door neighbor messed up Saturday morning cartoons. He helped develop "tele-text" systems for broadcast TV. He also went "silent-key" last year, thanks to cancer. My other mentors and Elmers have also either left radio or died.

There are some hams still on the leading edge, likes of Phil Karn and Cliff Stoll. They are doing ham radio, but also good work on the edge of communications and computer security. Some others are up there, too. (Sorry, don't know all of your names.)

Keep posting, your ideas may help bring the dream of others to life.

I just received a copy of 'Mobile Ham,' a slick Japanese ham magazine.
In addition to a whole pile of new FM-type rigs that I don't recognize,
they have a two-page spread on a new 50 MHz multimode rig from KenWood.
The TS-60 comes in 10, 25, and 50 watt versions and looks like the
TS-50. I can't read most of the Japenese text, but it appears that
they have taken RX dynamic range seriously.

So... watch for something new on 6 meters (it's about time!)

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

The paging company I use (SkyTel, aka National Satellite Paging) offers a time-of-day page. You tell the terminal (via touch-tone input) the date and time you want a page, and it pages you within a minute or two of that time. Excellent for creating socially-acceptable excuses to leave meetings, parties, visits with the in-laws, etc.

It seems to me there may be a market for a stand-alone device of this type.

Anyone have or reviewed Icom's new 707 radio? What's the
price? Specs?

Curious..... Kevin, KB9IUA

5479. Coax recommendations?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 15:56:38 UTC
From: doc@webrider.central.sun.com

Source record: 273105

Greetings -

I'm a new Ham who is drilling his first holes into the attic and basement for antenna use (Townhome so can't put it out in the open on the roof). My question is this - Given an run of about 50 ft. for the cable, what would the consensus be regarding the minimum size/grade of coax? I'm looking to find that point of diminishing returns on the type of cable I use.

The present antenna to be installed will be a 2-meter 4 element Yagi (because I got a good deal on it). I'm also considering how best to handle the possibility of running multiple cables for up to 3 antennas. Would multiple cables with a switch box on the control end be best, or is there another method that wouldn't require total duplication of cables (remote switching?)?

Many thanks for any information,

They are just terrific. I have not had one yet that did not exceed their
very conservatively rated capacity. They last about twice as long as
a NICAD. The batteries never get hot in the recharger. On my CD, a pair
of AA's lasts about 8 hours. I am very pleased with them so far.

Bob

As at least one other person has said, you don't have to go out and buy the most expensive HF rig you see. :-) In fact, there's nothing that says you even have to buy a brand-new rig. My first HF rig was an old Galaxy V Mk 3. Here's the story.....

I was home for vacation (Christmas break, in fact) from school, and one of the local hams (this was in San Antonio) heard that I was looking to upgrade to general (I was a tech), but that I didn't have an HF rig. He found out about this because I asked about details on where to either get a very inexpensive rig or get help building one. He wasn't too happy about the fact that I didn't have a rig, so he set out to ``solve'' this ``problem''. :-) Within 10 minutes, he'd found two people willing to donate gear. The first person who responded said he had an old military receiver that would at least get me started. The second person said that was nice, but he had an old Galaxy V that he'd sell to me for 25 cents.

So I ``bought'' a Galaxy V Mk 3 for 25 cents (he could then tell his wife, ``yes, dear, I *SOLD* it!''). The only condition on that sale was that when I was done with the rig, I either return it to him, or preferably, pass it on to another new ham. You guessed it...I ``sold'' it for 25 cents. :-) And, of course, the same conditions applied there, too---he's going to eventually ``sell'' it...for 25 cents.

Now, this may sound like an extreme example, but there are lots of old tube rigs out there, many of which are in pretty good shape. In fact, there are some tube rigs that I wouldn't mind having right now. I have a Kenwood TS-140S---it's a good rig, but somehow the old Collins and Drake rigs I remember using just, well, out-did it...don't ask me to explain it, because I can't. The same could be said for an old Heathkit HW-101 that I played with at one point (a friend from school and I made

a temporary trade just to try the other's rig out...the day I had to give that HW-101 back was a dismal day). It was as stable as any synth rig I've seen, and the audio quality, both xmit and rcv, was out of this world. I don't know if this applies to all of the 101s, but it certainly did for that one!

Look around. ASK AROUND! Let people know that you're looking for a rig that fits in with a college student's budget (i.e., it's virtually free), and that you just want to get on the air. Someone should be able to help you out.

Oh, one last point. Don't expect to get all sorts of fancy filtering from an old, inexpensive tube rig. Don't worry about it, either. First, your ears will develop to the point where you'll be able to pick out even the weakest sigs from the noise (I got really good at this, and when I'd go to the Texas A&M club station, W5AC, I'd easily work people who others in the shack couldn't even hear at all, even with all of the fancy filtering on the TS-930 that was there at the time). Second, you can always build your own filters and add them as outboard units. Op amps are dirt-cheap, and a +12/-12 VDC power supply isn't *THAT* expensive to build, either.... Just be careful about the voltage levels going to the (external) speaker on the tube rigs---you may need to add some level conversions (I did with the Galaxy).

Sorry if this is a bit terse---there's a thunderstorm on its way, and here on the island, we have power failures every time the wind blows...not to mention thunderstorms. I've got to be shutdown when the power starts to fluctuate..... (No, I can't afford a UPS yet, even at $100 US.)

In article <2es5k1$ldr@cismsun.univ-lyon1.fr> elendir@enst.fr () writes:

See my previous post (just a few minutes ago).

>There is a whole new
>world to explore above the GHz limit, new antennae to design, new devices
>to use, and that bandwith... Traditionnal HF is technically dead (more or
>less, everything is known)

HF is *NOT* dead as far as new technology is concerned. The directions have just changed a bit, that's all. If you look at the world of small (i.e., apartment-sized) antennas, for example, you'll see that there's a lot of room for experimenting. If you want more meaty experiments, look at the newer digital modes: clover, PacTOR, etc..... Ok, what about designing HF rigs themselves? There are all kinds of new things that can be done with filtering, for example (DSP being the new world to play with).

Ok, granted, some (much) of this is out of the budget range of your average person, but there are other areas that I've left out in my quest to have this system shutdown while the thunderstorm is still a couple of miles away. Oops...time's up.

I couldn't agree with you more Gary however since the goverment deregulated CB or for the more correct of us out here 11 meters there is so much illegal gear on 11m that I doubt that a 4 watt radio would even be noticed in the shi* on the band. If a person wants to get the radio tweaked though he should be able to get the schematics from any electronics dealer that carries SAM's photofacts and any competent electronics shop will do the work for him for about 10-15 bucks. I don't condone the person attempting the work himself with out the right gear or atleast a reasonable facsimile thereof. He could try a local ham club and might be able to find help with the gear and get a intrest in "our" hobby on the way. It may not be perfectly legal but it would be alot better then some of the riggs I have had to fix over the years. Not everyone is lucky enough to have a IFR 1200s in their shack.

For 2 meter work, get some RG8U. RG59U has too much attenuation up at VHF (something like 3 dB per 100 feet).

I carry an advisor by Motorola. It will display text messages also. It
can be purchased with nat'l service or local service. It has an alarm
built in to help you remember that important meeting or to get out of it.
I have carried the "bravo" pager also and like both. Some options for
the type of alert....ramp to full volume, short tones, vibration....ect.
Battery life is about 3weeks, and I leave my pager on 100% of the time.
The advisor uses a AAA and the bravo uses a AA.
I hope this helps

Just for the record, to use the text feature of the advisor the paging
person in most cases must leave the page with an operator who transcribes
it and sends it out. Software is avail. to send text pages via a
computer and a modem.

Hmmm, you didn't mention an important piece of information - what time are
you listening on 20 meters ?

If you are listening at night, then I understand your problem. We are
about 2/3 of the way down the sunspot cycle. Combine that with winter
time (i.e. not too many hours to ionize the F-layer), and you have a dead
band from 2 hours after sunset until an hour before sunrise. For Europe
on 20 meters from North America, your best bet is from local sunrise until about
1800Z (i.e. 2 hours after Europe sunset).

On the more positive side, no, you won't have to wait until the year 2002.
Summertime will provide those EU openings that you know and love !

It's got to be RG8 style or thicker - there's a flexi replacement for
9913 (which replaced 213 as the best for 2m) - I get mine at the RF connection
(301)-840-5477 in Maryland. I don't know the number for the new flexi cable.

Some calls have such a distinctive sound in CW that you never forget them.
A Japanese ham I talked to had the call JA7EU, and that's probably the
coolest CW call I have heard. The best stateside call I've heard is
K7EBW. Of course my own call ain't bad either ;-) I think the best calls
are those which could be put to music and be pleasant to hear that way.

Jeff:

Technically you are correct. However, AMA clubs can insure for liability at their flying fields. If, during an AMA sanctioned event, someone falls off a bleacher, trips and breaks an ankle, etc., the club is insured to cover that accident even though it was not caused by a model. The clubs can also have the owner of the field covered by AMA insurance. We have presented certificates of insurance to farmers located within reasonable flight patterns of our flying field.

And Jeff: you performed a great service in informing the non-ham that he needed a license. It is a hard thing to do, often causes bad feelings, but I would hope that you will do it the next time too. You have my vote!! We had a run-in with a flier who came out on the field during a fun fly, and during a lull, he warned us that he was using the "old' frequencies (i.e.

72.140 - red/white, etc.) Our club president walked over and told him he could not fly with those frequencies and got the same kind of treatment you did. The rest of us backed up the club president and the flier went away mad, but went away knowing that we would not tolerate his disregard of the law. Bravo for you Jeff!!

Right on Jeff!!

Many hobby dealers, or at least some of their staff have no clue. One store manager sold a guy a regular 4 channel airplane radio to fly his new helicopter, and didn't know the difference. Yes, there is a big difference!! The heli radio has electronically coupled throttle/collective, has automatic tail rotor inputs for increase/decrease collective, has throttle hold functions which uncouple the throttle and collective for practicing power off landings (autorotations), etc. etc. etc.

This same store manager had purchased a heli radio without knowing it, was flying his airplane with it (yes it works fine for that), but hit a switch to raise his landing gear. This switch was the "invert" switch which puts some of the control functions backwards for flying a helicopter upside down. The guy pulled back on the stick to raise the nose of the airplane, and it went nose down and destroyed itself as it impacted the runway. He didn't know what he had, refused to read the instructions, and was upset at the radio for doing just what it was designed to do. Yet, he is a hobby shop store manager. Watch out for the lids guys.

5498. THE><NET vs: Kantronics ?????

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 20:36:18 UTC
From: clmorgan@miavx3.mid.muohio.edu
Message-ID: <1993Dec20.153618.1654@miavx3.mid.muohio.edu>
Source record: 272932

Anyone experiencing problems with Kantronics' products, particularly the KAM, in networks utilizing THE><NET version 2.10?

Our problem seems to occur due to THE><NET's diddle during the TXD delay and prevents the KAM from validating a node's packets. Problem does not seem to occur when a MFJ (TNC-2 clone) TNC is on the receiving end. Kantronics boxes have included KAM (version 5 firmware), KAM (enhancement board & version 6 firmware), and KPC-2 (version 5 firmware).

Changing our THE><NET node back to version 2.08B firmware seems to have solved the problem.

Suggestions? Comments?

Yea and Hooray! My area has loads of young voices, even a couple with advanced and extra licenses.

I can hardly keep track of my HT because my 12 year old covets it and even hides it in his room at night (KB7ZIU). My 22 year old (KB7ZIV) is not quite so ambitious. Come on Christmas! so I can let them tear the wrappings off their Alinco DJ-180T's!!!! I want my radio back. My 12 yr old uses the packet station like he was born under it, talks with oldsters and youngsters alike, and is now studying his code. Heaven help my HF rig when he gets his code!! I am looking for a backup rig I can put in his room and another HF antenna for the roof!

We have lots of other 8-16 year olds that ride the airwaves and not only get a kick out of talking to each other, but all the older hams in the area, as well as HF DX in South America etc. KB7WIG is working on his general class, KB7WCV talks to us occasionally during our commute and also has his tech+ and a TS-520. KB7WYE got his license at 13 and is an Eagle Scout, talks to both me and my son when his mom is driving him to school. An 8 year old girl passed no code tech at the last testing session ---- they are there guys, at least here in Utah, and we are loving it. A lot of these hams have dads who are also hams. And there are a new breed of single women as well as spouses who have gotten their licenses in the three valleys here in the west.

We welcome the new voices and congratulate them on licenses and upgrades, and talk to them whenever we get the chance. Saturday night, one club staged a North Pole "link" with Santa Clause, and used a net control to have kids of hams talk to Santa over the 2M repeater. Think those kids will remember ham radio and a chat with Santa?

My 12 year old is putting me to shame: he registered with ARES and checks into their net every Tues night (past his bedtime by the way), but I kinda look the other way.

These kids are smart, pick up professional operating procedures, and often sound like seasoned hams, putting some of the old timers to shame who have picked up some poor radio habits. Don't be afraid to let the kid next door, or your own, talk on your radio. It seems to be habit forming. Don't forget to lock the gear up though, kids have a tendency to use it when they want, licensed or not.

Cheer up Drew, and all you others. Encourage the youth, and you will get more than you want. Forgot to mention that many scout troops have a radio night, and arrange to have the scouts listen and talk on one of the repeaters as well as HF. Just takes some organization and some hams who care.

5500. Portable Repeater Help

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 20:39:08 UTC
From: Rick Aldom <ayka60@email.sps.mot.com>
Message-ID: <1993Dec20.203908.1024@newsgate.sps.mot.com>
Source record: 273120

A friend and I are having a wonderful time playing with ham radio projects. We started with a couple of antenna projects and we are moving up into the bigger (read expensive) projects. We are currently building a dual band 2mtr/70cm amp for mobile (or base) operation. We allowed our imagination to run some and thought having a portable repeater might be over some use.
So we have most all the parts required to fab a repeater, and would love any constructive idea's to help us along. One big part we lack is the duplexer. If anyone has plans for one we would love to look them over. If anyone has a set of cavities, we would entertain the thought of purchasing them.
The current plan is to put the amps in a 20mm ammo can and the duplexers and control circuitry in another ammo can and interconnect them to make a repeater. With luck we will have room for the 12volt deep cycle rv battery!
We have read through the ARRL handbook and the antenna handbook, but still have some questions on the best approach. So if this is a project you worked your way through please drop us a note.

Thanks
Rick Aldom

Hey Nick!

For $6.95 you can get the entire US 2M repeater directory from ARRL. I got
mine in the local radio store here. Then you would never be without a
guide to wherever you may be going.

Howdy! I was referred to this newsgroup because of the nature of my problem:

Does anyone know of a way to remedy this problem? When I turn on my guitar amp, I get radio interference coming out of it (I can make out the songs perfectly - quite annoying and embarrasing!!) So, is there a way to "filter" this garbage out? Also, the interference intensifies as the reverb is turned up.

ANY help would be appreciated!

Don't know if I am off base or not, but with all the frequency coordination required in many, many populated areas for multiple repeaters, would not a "PORTABLE REPEATER" create lots of havoc and interference in built-up areas? Hope you plan to use this in a very large desert. Some repeaters have very long ranges: our .62 repeater covers well over 100 miles north, west, and south on 50 watts.

Please take note to coordinate and use the minimum power required. Don't know if I misunderstood, but felt I needed to comment.

Nope. Just need a 110v wall socket. All of charging circuitry is
built in to the battery case and an AC adapter comes with the
battery.

Well I'd be intrgued to see anything by Tokyo Hi Power. I have a 432 amp
bythem, and the distributor in this country, a crowd in Fresno I think,
never had any manuals and would never answer their phone. Eventually I got
onto them and they told me that they didddn't carry Tokyo Hi Power anynmore
and that Tokyo Hi Power were not supporting sales in the US (and never had
as far as I can tell, at least from the availablity of manuals in this
vountry).

5508. experience on HT wide-band receive

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 22:45:04 UTC
From: hopprich@davidsys.com
Message-ID: <1993Dec20.144504.31223@davidsys.com>
Source record: 273028

I am a new ham who is considering buying a handheld. I am trying to
decide which HT I want to buy as a first rig, I want an HT for
portability. Basically what I would like is a dual bander 2m/70cm
with a wide-band receiver, (that's not too much to ask is it!-)
I guess I may have to compromise.

I would like the wideband to act as a scanner to listen to
various bands and services and get a feel for them, preferably
down below 100MHz to pickup comercial FM (if this is possible),
as well as several HAM and aircraft bands etc.
I would like the 2m/70cm for all the activity and the many
repeaters on these bands.

The basic questions I have are;
1. how well does Icom's 2SRA work on 2m and wideband
2. does anybody have experience with any mods to other HT's to
increase their reception bandwidth, preferably a dual-bander.

Thanks in advance for any information/experience.

5509. Designations for microwave bands?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-20 23:31:40 UTC
From: btoback@netcom.com
Message-ID: <btobackCICxCs.2tw@netcom.com>
Source record: 273029

I've looked everywhere but in the right place, and I can't find a list of the alphabetic designations for microwave bands and the frequencies they represent (e.g., Ku-band, C-band, etc.).

Can anyone tell me where I can find such a list? I've been able to get some idea from context, at least where frequently-used amateur microwave bands are concerned, but it would be nice to have the whole list.

Thanks,
-- Bruce Toback

PRESIDENT'S REPORT

AS 1993 DRAWS TO A CLOSE I TAKE THIS OPPORTUNITY TO THANK THE COMMITTEE OF ANARTS FOR ONCE AGAIN PUTTING IN A MIGHTY EFFORT DURING THE YEAR. THANKS TO PAT VK2JPA, OUR BROADCAST OFFICER AND SECRETARY, FOR COLLECTING, AND COLLATING THE BROADCAST EACH WEEK, PAT ALSO TRANSMITS THE CAST ON 146.675 MHZ EACH WEEK. THANKS PAT. THANKS ALSO TO JIM VK2BQS, VICE PRESIDENT, CONTEST MANAGER AND RELAY OFFICER ON 20/80 Mtr AND TO ALAN VK2DPM, TREASURER AND RELAY OFFICER FEC MODE ON 20 METRES. ALAN ALSO LOOKS AFTER OUR RTTY BBS/REPEATER ON 146.675 MHZ. THANKS JIM AND ALAN.

ANARTS WORLD WIDE RTTY CONTEST WAS A GREAT SUCCESS THIS YEAR, JIM HAD A BUSY TIME COLLATING THE RESULTS. IT IS PLEASING TO SEE THE SINGLE AND MULTI OPERATOR MODES WERE WON BY AUSTRALIAN STATIONS. THERE WAS AN INCREASE OF 62 PERCENT OF LOGS RECEIVED OVER THE 1992 CONTEST. HOWEVER THERE WERE ONLY 6 LOGS RECEIVED FROM VK STATIONS AND 12 KNOWN VK STATIONS WHO EXCHANGED QSO DETAILS DURING THE CONTEST. SOME LOGS FROM OVERSEAS COMMENTED ON THIS, SO NEXT YEAR, PLEASE, COULD MORE VK'S TAKE PART, OR, IF YOU ARE UNABLE TO ENTER A LOG, EXCHANGE DETAILS WITH A FEW OVERSEAS STATIONS. BY THE WAY OUR NEW BEAUT WINNERS PLAQUES HAVE BEEN RECEIVED FROM THE MANUFACTURERS AND HAVE BEEN POSTED TO THE WINNERS. CONGRATULATIONS TO ALL.

THE MEMBERSHIP OF ANARTS IS NOT ALL THAT HIGH AT THE PRESENT TIME, IT WOULD BE NICE TO HAVE A FEW MORE MEMBERS. IF YOU TAKE THIS BROADCAST ON A REGULAR BASIS AND HAVE NOT YET JOINED, WHY NOT WRITE OR SEND A PACKET TO PAT VK2JPA VIA VK2RWI BBS. YOU CAN ALSO EITHER SEND ME A PACKET VK2CTD VIA VK2RWI BBS OR PHONE ME ON 02 624-3989 REPEAT 02 624-3989. WE WILL ENSURE AN APPLICATION FORM IS SENT TO YOU.

A NEW LOOK RY'S NEWSLETTER IS ON THE DRAWING BOARD AND THE FIRST EDITION SHOULD BE OUT SOON. IF YOU HAVE ANY NEWS OR ARTICLES, ESPECIALLY THOSE THAT MAY BE TOO LONG FOR INCLUSION IN BROADCASTS, OR PERHAPS HAVE A QUESTION REGARDING DIGITAL MODES, PLEASE, AGAIN, SEND TO PAT VK2JPA. WE HOPE TO ISSUE THE NEWSLETTER ON A MORE REGULAR BASIS.

IF YOU ARE PLANNING TO VISIT THE GOSFORD FIELD DAY IN FEBRUARY, WHY NOT PAY A VISIT TO THE ANARTS DISPLAY. WE ARE LOOKING FOR VOLUNTEERS TO ASSIST RUN THE DISPLAY OR TO RELIEVE OTHERS FOR AN HOUR OR SO ENABLING THEM SEE THE SHOW. IF YOU HAVE ANY IDEAS REGARDING THE DISPLAY, OR HAVE ANY RTTY EQUIPMENT OF HISTORICAL INTEREST TO DISPLAY PLEASE LET US KNOW.
FINALLY, I WISH ALL COMMITTEE MEMBERS AND ALL STATIONS THAT TAKE OUR BROADCAST, A VERY MERRY CHRISTMAS AND A PROSPEROUS NEW YEAR FILLED WITH MANY A RARE RTTY QSO, SEE YOU ALL AT GOSFORD.

73'S DE COL VK2CTD.....

QST DE W1AW DX BULLETIN 68 ARLD068 FROM ARRL HEADQUARTERS
NEWINGTON CT DECEMBER 14, 1993 TO ALL RADIO AMATEURS

RTTY HONOR ROLL CREATED

TODAY, THE ARRL AWARDS COMMITTEE VOTED 6 ''YES'' AND 1 ''NO''
TO ACCEPT ARRL DX ADVISORY COMMITTEE (DXAC) RECOMMENDATION TO
CREATE AN HONOR ROLL FOR RTTY DXCC. QUALIFICATION FOR THIS
NEW HONOR ROLL IS THE SAME AS FOR MIXED HONOR ROLL--318
CURRENT (NOT DELETED) COUNTRIES. (JANUARY 1, 1994 ERITREA
WILL BE ADDED TO THE DXCC COUNTRIES LIST, AND THE LEVEL WILL
RISE TO 319 CURRENT COUNTRIES.)

THIS ACTION MAKES HONOR ROLLS FOR ALL DXCC ''MODE'' AWARDS.
THE RTTY DXCC ACCEPTS CONTACTS MADE USING BAUDOT, ASCII,
AMTOR, AND OTHER NON-CW DIGITAL PROTOCOLS.

PERSONS WHO QUALIFY FOR RTTY HONOR ROLL WILL BE RECOGNIZED
BASED ON THEIR RTTY DXCC RECORDS. NO OTHER ACTION IS REQUIRED.
(VIA HF PACTOR)

Alan VK2DPM back on deck

You will be glad to know that Alan VK2DPM has fully recovered
from the illness he suffered last weekend. It was a
complication from the infected throat epidemic currently
sweeping Sydney. Alan will be doing the AMTOR FEC cast, so
listen in on 14070 MHz +/- QRM, and exchange Seasons
Greetings.

ANARTS broadcast schedules for the holiday season

The broadcast will resume on 9th January 1994 with, we hope,
vastly refreshed relay officers - also your broadcast officer
will enjoy the break. We will see you again then and hope that
we receive lots of information about club activities in your
state. Of course the first event to be publicised will be the
Gosford/Wyong Field Day in February, and that information will
be in from the first cast with reminders closer to the event.

Have a great festive season and drive carefully. May your
stocking be full of electronic goodies.

de Pat VK2JPA

IPS weekly report
---
10 December - 16 December 1993

Issue no.: 51

Date of issue: 17 December 1993

Date 10 11 12 13 14 15 16
10cm 96 93 91 88 88 85 85
A 06 04 06 02 02 09 (15 estimated)
T 46 48 55 38 37 39 16

Summary of activity

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) was quiet on 12th-14th December, quiet to unsettled 10th-11th and 15th, and active on 16th.

Ionospheric F2 critical frequencies at Sydney on 3rd were near predicted monthly values on 10th-12th and 14th-15th, and depressed by up to 15 per cent on 13th and 16th.

Forecast for the next week (17 - 23 December)

Solar : Very low.

Geomagnetic: Active to unsettled 17 December, unsettled 18 December, quiet 19-23 December.

Ionospheric: Depressed 15-30 per cent 17 December, near normal 18-23 December.

Courtesy of IPS Radio and Space Services

Milt's advice is good. The manufacturer's advice for long term storage
of NiCd cells is to store them *individually* totally discharged. No
chemical activity takes place in a totally discharged cell, so they
shouldn't be harmed by long storage. However, if the cells are connected
in a pack, then follow what Milt said. You can get a reversed cell as the
pack self-discharges in storage. There's always some leakage current in a
pack even if it isn't hooked to a load. Recharging every couple of months
should keep the pack alive during storage, but of course you're eating
up cell life by cycling them.

Depends, I guess. In Colorado, the freq coordinator has seen fit to
set aside a few frequency pairs for Special Event or Emergency
repeaters. Thus, some public service minded people keep portable
repeaters crystalled up on those pairs.

I think you'll find after the effort and time of climbing up and down, back and forth, etc. that whether you spend $20 or $50 on cable really doesn't make that much difference in cost but can certainly make a big difference in performance.

I'd say for a 50w rig at 2m (VHF) RG8U is probably the minimum you want to use. For 440 (UHF) you probably want to go with 9913. If you want to run VHF & UHF, consider purchasing duplexers. If the runs are short enough and accessible, then I might just run multiple lines.

I have a briefcase repeater that I carry with me for boonie ad hoc repeater use and for use at hamfests. The trick to cause the minimum of disruption is to use low power, mine's 2 watts, and use CTCSS access. The biggest no-no is to operate inverted from the bandplan. This can cause real trouble. In most of the country, a UHF portable repeater like this can be a big help at outdoor events while causing almost no problem. However, sometimes there's a local machine on the same pair and you can't use your toy. That's OK, just use the big machine. My portable is on the same pair as my big machine, so when I use it locally I can only jam myself. :-) It turns out to be useful inside some of the big convention center halls where hamfests are held, and where the big machine doesn't penetrate too well for handheld users. It's also useful outside in some of the main repeater's coverage holes.

Getting coordination for a portable repeater is impossible. But do use the repeater directories, and *listen* before activating a portable. That in essence is doing your own coordination. If you're upright on the same pair with a distant machine, you won't cause much, if any, trouble to it's regular users as long as your repeater is CTCSS, uses low power, and *your* users do the same. The biggest problem will be your users triggering the distant machine, if it's carrier operated and a bunny rabbit (all ears). The secondary problem may be your machine's output covering the distant machine for some ham near you trying to repeater DX. You should be alert to these situations and be ready to shutdown at a moment's notice if problems arise.

To Rick, my portable is a conventional repeater with duplexer, in a Zero Haliburton case with a gell cell, but that may not be the best solution for outdoor use. An alternative is to use two frequency agile radios (a pair of older HTs would be fine), a controller, and separate antennas. With decent spacing, vertical separation preferred, you can have a system you can plop down on any locally vacant pair by just turning a couple of knobs. Retuning a duplexer in the field isn't fun, but a couple of notch cavities can be whipped on frequency fairly easily, and will ease the antenna separation requirements. Low power eases the desense problem too. Using ammo cans to house the radios is a good idea, one radio to a can. That gives the extra shielding you're likely to need.

Gary

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

5517. HELP with KLM Beam ???

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-21 04:30:37 UTC
From: segrest@bobseg.enet.dec.com
Message-ID: <2f5u5d$iku@sousa.ako.dec.com>
Source record: 273042

Greetings,

A couple of months back I was wandering through one of the regional ham fests and had the good fortune to pick up a nice looking 440 beam. The fellow that I bought it from said that it was a KLM antenna.

The beam has a 5' long boom with 4'8" between the reflector and further most director elements. There are 9 directors and one reflector. Each element is bolted to the boom through a plastic tee. The boom has been drilled for either horizontal or vertical orientation both at the end and in the middle. The driven element consists of eight half elements cross connect with straps in what I believe (from looking in the RSGB VHF book) is a log-periodic configuration.

Looking in the latest AES catalog I suspect that what I have is a KLM 440-10X beam.

The problem is that I don't know how to hook the coax up to this beast. The two foremost driven half-elements had slightly longer bolts and a second set of nuts. I connect my coax to these two points and I am getting a fairly high (a little over 2:1) SWR.

Is this correct?

The RSGB VHF manual seems to show a loop of wire connecting the back end of the driven element array. There is no loop of this sort on the antenna I have.

If anyone has one of these beams and can tell me how it is supposed to be configured I would very much appreciate some assistance.

Thanks in advance.....

Bob Segrest

NOTE: The Effective Sunspot Number for 19 DEC 93 is not available.
The Full Kp Indices for 19 DEC 93 are not available.

SYNOPSIS OF ACTIVITY

Solar activity was low. New Region 7640 (N09E70) produced
several small C-class flares and numerous lesser fluctuations.
This region is new from last rotation and appears to be in a
growth phase. The spots here are not in a standard bipolar
configuration. Region 7641 (N03E75) also appeared but was
quiet. This is the return of old Region 7624 which seems to
have slowly decayed during its invisible hemisphere transit.
Other regions were stable and quiet. Recent Yohkoh images do
not show the large coronal hole in the northeast quadrant that
has been persistent for many rotations. It may become visible
as those longitudes approach central meridian.

Solar activity forecast: solar activity should continue
at a generally low level. Region 7640 is capable of producing
isolated M-class flares. Once the magnetic structure can be
observed, this forecast may increase. At this time, Region
7640 does not appear capable of generating a major flare.

The geomagnetic field was at quiet to unsettled levels.
Isolated active conditions were experienced at various sites
at various times.

Geophysical activity forecast: the field should be
predominantly unsettled on 21 Dec. Quiet conditions are
forecast for 22-23 Dec.

Event probabilities 21 dec-23 dec

Class M 25/25/25
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 21 dec-23 dec

A. Middle Latitudes
Active 25/15/15
Minor Storm 10/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 25/15/15
Minor Storm 10/05/05
Major-Severe Storm 01/01/01

HF propagation conditions continued near-normal over the
middle and low latitudes. High and polar latitudes also
continued to see slightly below-normal propagation with
night-sector signal instabilities dominating. Similar
conditions are expected over the next 72 hours, with gradual
improvements over the high latitudes possible. SWF activity
is possible over middle and low latitude sunlit paths.

Anyone know if there is any shareware versions of the
alphanumeric software (that works)? I have a copy of PAGE10.ZIP
and can't get it to fly.

Just for an interesting tidbit, we have a local radio station (as in
music) thats call letters are KZIO.

QUESTION: Does anyone know how I would find a packet address for
someone, if I know there call?

5523. Re: Designations for microwave bands?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-21 09:16:35 UTC
From: davies@mobira.nmp.nokia.com
Message-ID: <2f6etj$3m8@noknic.nokia.com>
Source record: 273043

Bruce Toback (btoback@netcom.com) wrote:
> I've looked everywhere but in the right place, and I can't find a list of
> the alphabetic designations for microwave bands and the frequencies they
> represent (e.g., Ku-band, C-band, etc.).

Various publications have such lists, but be wary that there is not always agreement on which letter should be used. Some are pretty standard, like X-band (amateur 10GHz band, actually means something like 8.2 to 12.4GHz), and K-band (amateur 24GHz, actually means 18.0 to 26.5GHz). But for some bands, several letters have been used. Hewlett-Packard seemed to have their own set of letters which deviated (from normal UK usage) in places.

I think there is a table in the RSGB Microwave Handbook Vol 2 which, if I remember correctly, was supposed to include these different letter usages, plus the waveguide sizes. A HP catalog will mention some under the Microwave Test Accessories, but nowadays the letters only tend to be used for higher bands, eg 8GHz up.

I'll try and dig out a table, I think I even have an ASCII tabular version with all the waveguide sizes etc.

I am in the market for a new dual-bander. I originally had a
Yaesu FT-470, but I am looking for something different.

Friends of mine have W2As, and seem to like them.

I'd like opinions and comments about this radio. Any problems,
praises, etc.

Thanks much!

Scott

Hi!

Is there any radio capable of doing all modes for packet, and also
for doing normal connections throught a normal serial phone line? is fax
possible to?

Cheers,
JLuis (CT1EZW)

Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,misc.forsale

I have one Cushcraft R-5 in excellent condition for sale at $175. The R-5 is an easy to put together halfwave vertical for 10-20 meters (but works on 6 meters too, an unadvertised feature) that requires no ground radials. It's a great performer.

Email if interested.

5527. Help With Noise Source

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-21 13:27:52 UTC
From: w1gd@cbnewsj.cb.att.com
Message-ID: <CIE02M.91y@cbnewsj.cb.att.com>
Source record: 273053
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I'm looking for help in tracking down a source of noise. I've had pretty good results tracking these things down in the past, but this one has me stumped. The noise is really a problem only on 160 meters. Since I've been operating 160 only in contests, I haven't taken the time to track this down before now. With sunspots disappearing as fast as they are, it's finally time to track down the source and get rid of it. I've made the following observations:

1. The noise is 20db over S9 on my S-meter on 160. (I use an inverted-L on this band.) The noise level falls off rapidly: around S3 on 80 and barely noticeable on 15 and 10 meters. I actually only hear the noise on 15 and 10 when the band is very quiet (like at night or early morning) and the beam is pointed south.

2. The noise has a VERY regular pattern: approximately 3 seconds on and 1 second off. The noise blankers on my TS-940 don't have much effect.

3. The noise is present at all times of the year and at all times of the day or night EXCEPT when it is raining or right after it has stopped raining.

4. I've eliminated my house by shutting down all power and listening on a battery operated radio -- the noise is still present. Pointing the beam to peak the noise on 15 and 10 meters gives me a general direction. The noise is so weak up there, it's hard to get any more that about 30 degree accuracy, but the nearest house in that direction is about 1000 feet away. We have underground utilities in our development. The adjacent neighborhood has above ground utilities and is at least 0.5 miles away in that direction.

Conclusions I've drawn so far:

1. The noise source is outside (because of the effect of rain).
2. It's not a thermostat or door bell transformer (the regularity of the pattern and the independence of season and temperature).
3. It's not a power transformer or insulator problem (because of the regular pattern).
4. Because of the high level on 160 and the drop off at higher frequencies, it's not very close but must have a fair amount of power (I think this eliminates any outside motion detectors that control lights.)

I'd really appreciate any help on identifying the noise source.

Thanks,

Gerry, W1GD

5528. Help Needed !!! on Power supply...

Greetings! Let's just imagine that you are tooling around on 80m one evening and come across a very faint signal which sounds like it just ended a cq call with /qrp. Let's just suppose that you are seized with the desire to work this station, so you through on your phones (stereo so all sound goes through one ear piece only) and you turn the af and rf gain all the way up so that you can hear the signal better....now, just as you are straining to the utmost to make out the final letter in the call, let's just say your wife is in the kitchen and decides to make some cookies....and, as a result, turns on the hand mixer...

When you regain consciousness, you'll have to mention to your dear xyl that the noise level coming out of that thing takes the needle off the scale... OW.....

The callbook server at the New Jersey Institute of Technology has been listed as a menu choice on our local VAX. However, when I tried it today, I got the message that the server has been shut down.

Does anyone know of an alternate address. Is the one at SUNY Buffalo still in operation? What is its address.

Many thanks for your help.

Back in the old days, this used to be a problem for me too. So let me pass on a tip. Wire back to back diodes across the headphones. For the older 2,000 ohm phones single diodes worked well, for the newer low impedance phones you may want to try low threshold germanium diodes. The idea is to make a limiter that normally doesn't conduct, but when a sudden loud noise comes along it will clamp the signal to a tolerable level.

This also has another side effect that you may or may not like. When you transmit, the diodes act as an untuned crystal set. For my old AM rig, I could monitor my transmissions nicely. With Morse, you'd get the click clack of a telegraph sounder. Donald Duck would still sound like Donald Duck.

5534. Re: Help With Noise Source

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-21 15:45:45 UTC
From: ravengre@adcae1.comm.mot.com
Message-ID: <1993Dec21.154545.28056@lmpsbbs.comm.mot.com>
Source record: 273072

I have had good success tracking these kinds of noise sources.
I have found the best "tracker" to be an IC-202 with a 5 element
Yagi. The IC-202 is a small battery operated 2 meter SSB rig that
is very sensitive. Connect this to the 5 element yagi, and you
walk around the house pointing the yagi in all directions, looking
for a peak. It does not seem to matter that the noise power
is falling off at higher frequencies. Even defective power lines
are detectable with this set-up. The directivity of the yagi
allows the source to be pin-pointed with good accuracy.

An alternative is to drive around in the car with your AM radio
tuned to an unused channel. You will hear a large noise peak
when approaching the noise source. This is not as accurate-
it gets you in the general vicinity at which point you deploy
the directional antenna.

Anything controlled by SCRs generates large amounts of low-
frequency noise. Lamp dimmers and light controllers are
especially bad.

You sound like you are in a rural area. Check for electric
fence chargers. Look for small horse or cow pastures with
an insulated wire around them (usually about 2 feet off
the ground). The chargers pulse the wire, I believe at about
the rate you mentioned. They would tend to short to ground
during rain.

If you can not eliminate the source, try building a rotatable
loop antenna. You could get 30 or 40 dB of suppression, maybe
more. Most noise sources are highly polarized and easy to
null out.

Good luck,
Greg KF5N

Message-ID: <holland-211293100535@right.dom.uab.edu>
Source record: 273059

A few days ago I related some ideas off the top of my head
on ways to get kids interested in radio technology. There have been
some fine posts here that detail how there is a lot of enthusiasm
among youngsters. I have a nephew that looks forward to my visiting
because he can try to make contacts with my HT over a local repeater.
This is the cats meow for him.

One person e-mailed me asking what I might advise on using the 49Mhz
band for intro to radio. As the ideas I had for generating interest
where there was none is a separate issue from cultivating interest
in those with some, I was hoping that the net might generate some
enlightenment on what the 49MHz band might be useful for. That is,
for example, if one could use toy 49MHz HT's and use a reflector with
or without a director one could show a kid how setting up a yagi
could extend range further than the next tree. Other things might be
done with this as well. But what can one legally do on 49MHz? Does
anyone know what the power restrictions and modulation restrictions
are on this band. I also assume that the band can be used by anyone
without a license as long as the rig meets these restrictions.

Any other ideas for projects that might give someone the technology
bug?

It sounds like you have a KLM with the two element log-periodic feed. These
are supposed to (and may actually have) a wider bandwidth than a regular
yagi feed. I have several of these at 2m. The feed point is 200ohms balanced.
It sounds like you are missing the balun. No problem. You need a connector
mounted to the boom (electrically) via a thick strap (say 1/8" Al sheet), bent
to fit the boom (recommend N connector). You need 1/2wavelngth of coax (any
impedance - suggest RG-141, it's the hard copper outer teflon diellectric
coax - it's 0.141" in diam - you can solder the outsdie of the coax). Drill
two of the holes in the coax connector out to fit the coax (need a plated
brass N connector for this). FOrm the coax into a hair pin and solder the
ends of the coax into the connector. Join the center pin of the connector
to the center conductor of one side of the hairpin. tThe balnun output
- the two ends of the center conductor of the coax hairpin - is 200 ohms
balanced. Join these to your feed point.
Give me a call if you have trouble

George:

I disagree: I know five young hams in my area (under the age of 17) who are studying code, and two who have been making CW contacts on the novice bands and are nearly ready to get their general licenses at 13 WPM. I also just upgraded to general, and worked hard to meet the code requirements.

Given that it's been only 6 weeks since you took your exam, I'd say kick back, relax, and stop pestering your mailman! :-) We generally tell folks that the wait is about 8-10 weeks (though it might be less, if the FCC is feeling fairly efficient -- don't count on it, though). Given that Thanksgiving happened between now and then, and given the upcoming Christmas holidays, I'd say it's going to be closer to 10. Also, don't bother calling the FCC until 90 days have passed -- they'll only tell you to wait until 90 days have passed. And they can't tell you anything about your application unless they've actually processed it -- which only happens about 3 days before you receive it in the mail.

BTW, I am assuming that the 11/9/93 you mention is November 9th, not September 11th. If it's actually supposed to be September, then call your VE team, ask which VEC they sent your forms to, and call that VEC immediately! If it's November, then relax, you've still got a few weeks to wait. Yup, I know it's tough -- I think my mailman is still a bit traumatized from when I was waiting for mine, and that was 2-1/2 years ago! :-)

I hope the code requirement is never abolished. I beleive that 5wpm though is good enough for any amatuer ticket. Maybe someday this will happen but till then, 5wpm is no big deal to learn and 13 is harded but like any other skill you learn it may pay off sometime in your life.

>>
>> They are waiting for the obsolete code requirements to be eliminated.

I have a theory that (unfortunately) may sound too farfetched to some hams (mostly OFs) on the net for them to believe it.

They have been driven off by the non-stop bickering (other words fit fine here :-) and the effort to make no-coders be second-class (or lower) citizens. They have quit going to meetings and checking into the nets because they have found it isn't worth listening to all the crap that is dished out to them for whatever reason.

I know many people will disagree with this theory, but from my (somewhat limited, yet completely youthfull) experience in ham radio, I have found this to fit better than any "they're too lazy"-type suggestion.

^^^^^^^^^^^^^^^^^^^^^^^^^^

I do hope these numbers were put in the info sheet as either a mistake
or a joke (that's explained somewhere else), because they're not even
remotely close to reality.... Sure, it would be *NICE* to have 300 Meg
of disk space (boy would it *EVER* be nice!!!), but you can have a minimal
system (mostly only for system maintenance, e.g., filesystem repair) on a
single 1.44 Meg floppy, and with 30 Meg of space, you can have a fairly
decent system.

Here's what I have:

Filesystem 1024-blocks Used Available Capacity Mounted on
/dev/hda3 54390 49789 1882 96% /
/dev/hda6 16694 8153 7707 51% /newsspool

plus a 6.7 Meg swap partition.

The /newsspool partition holds /usr/spool/news/* for a limited news feed,
and the root partition holds everything else. Yes, space is tight (as
shown above), but part of that is due to some stuff that I'm working on
right now that's taking up lots of extra space (normally I have about
5--6 Meg free in '/').

In that root partition, I have the basic system including gcc, Taylor UUCP,
smail, C-News, trn, etc., as well as TeX and METAFONT, X11R5 (not the
complete distribution---only stuff I use), various PD utils, games, etc....

As for RAM, 8 Meg is certainly a good idea, but I ran on 4 Meg up until
very recently (including X, btw, though not all the time), and am now
still only running 6 Meg.

Just wanted to set the record straight.....

|> Intrigued by above item. Anyone have one or seen one in action?

I have seen, held, and used one. It's big and heavy and you have to pay
about $75 extra for a set of three gigantic whip antennas, one for each
band. However, it does work, and is the only handheld I'm aware of that
will let you work California to Minnesota, direct.

Unfortunately the other poster is correct. Due to the fall in the yen,
Tokyo Hi-Power has decided to pull out of the U.S. market, and Orion,
their U.S. distributor, was unable to convince them otherwise. They
tried hard, too.

> Area of most growth now.

There is one other pager type, but it may not be made any more. It was a
used by one company offering nationwide paging services, and it "listens"
to FM broadcast stations that may carry an SCA signal for the paging company.
It has exactly one advantage: it can tell you when it's out of range, since
it locks on to an SCA signal. No SCA signal, no page; the unit emits a
soft beep about every two minutes to inform you.

However, it has a very low success rate, even when it claims it IS receiving
a signal. My guess is that this stems from the difficulty of obtaining a
signal from a very small antenna that is good enough to permit reception
and demodulation of the subcarrier. Whatever the reason, the only justification
for using one of these beasts is that you really don't want to be paged
anyway.

5559. Re: Where are all the young enthusiasts?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-21 21:41:52 UTC
From: jackson@longlast.cs.nyu.edu
Message-ID: <2f7qj0$6me@slinky.cs.nyu.edu>
Source record: 272939

Why am I interested?

Profile: 23 years old, train commuter to NYC weekdays, car commuter to Phila. weekends. Computer enthusiast for ~12 years. Scanner enthusiast for 8 years. Part-time SWL'r for 2 years.

I have a scanner and a CB in my car. When I drive, I monitor 9 most of the time for people who need help. I call on 9 anytime I see people stranded in an area that I've been able to make contact in the past, or have a feeling someone is listening (can see the State Police Barracks from the road).

I listen to the scanner to plan traffic routes (and to know to pull over a few seconds before a high speed chase comes up my back!). I used to have a bad problem of falling asleep at the wheel. 19 has come to my rescue by keeping me up and talking more than once. More and more often, lately, I've been finding just a bunch of undesirables (undesired by me, at least) ruining the conversation after one or two comebacks. Not my cup of tea. If OT's are welcoming, I know I'll hear nicer hams on the nets.

My primary interests are packet comms, VHF/UHF voice, and DX CW. I love PC networking and am very interested in learning lots about amateur radio networking.

As for voice, I read once that you can't go anywhere without being covered by a 2m repeater somewhere (obviously proved wrong by the guy who ended up having to call the sheriff on an admin freq). All too often have I come across someone that needs SOME kind of help and 19 and 9 are dead and useless. I'm sure I could join a net somewhere between Philadelphia and New York where I would be able to autopatch to police/fire/rescue. I would even be interested in setting up a repeater ONLY for emergency communications, since I have a feeling the NYC metro area is pretty much saturated with 2m repeaters.

How did I become interested?

2 years ago Saturday (hint-hint), my parents gave me an analog shortwave radio from Sharper Image. The kind that has modern electronics inside, but is a replica of a fifties style radio on the outside. The dial has pointers to different countries/cities on its face. However, at around 150MHz, it has PAGERS written on it! Of course its true, but it's also supposed to be a replica from forty years ago! I was amazed at how many stations I could pick up with that longwire antenna. Just tape it all the way around the room where the walls meet the ceiling and turn the radio on.. had me hooked the first day. I even took Japanese lessons ;-) Now I can order a table for two in a non-smoking section of a restaurant.

In addition, listening to public service on the scanner may bore some people, but I love it. I can't walk very well some days, so instead of being an EMT

or a firefighter, I am more interested in being just another pair of eyes on the road for the respective agencies.

I guess I'm most interested in exchanging public service frequency information and monitoring tips with people around the country and helping to provide communications to agencies of an emerging situation when it seems to have gone unnoticed. I never did get a chance to thank the ham that autopatched to Lawrence Twp PD when I came across the four car smashup and no one was monitoring 9 (including him).

And finally, a few years ago, I saw an NBC Nightly News special about the war in the former Yugoslavia. They showed a shack and opened a sentence with, "according to ham radio operators here who have been in contact with the locals..." Boy did that get my ears perked! I really want to know CW since it's supposed to be the best for the absolute worst case scenario. (I mean worst!)

Unsolicited, but hey..

Bruce Toback (btoback@netcom.com) wrote:
: I've looked everywhere but in the right place, and I can't find a list of
: the alphabetic designations for microwave bands and the frequencies they
: represent (e.g., Ku-band, C-band, etc.).

: Can anyone tell me where I can find such a list? I've been able to get

Sams' "Reference Data for Engineers" has such a list in the seventh edition on pg 1-4. For example, X band is 5.20GHz to 10.90GHz, K band is 10.9 to 36 (with Ku at 17.25). A footnote says C band includes Sz through Xy, or 3.90 to 6.20GHz.

(This book has, IMHO, a _lot_ of pretty accessible information, though I've found the filters section to have become somewhat more cryptic in the current edition than in previous editions. Previously it was called "Reference Data for Radio Engineers," and still has a fairly strong "radio" flavor.)

Hello all. Just had my first bad experience as a Tech plus licensee. Went up to KSUARC's club shack to see if 10M was open...it wasn't (or if it was, noone was listening), so I decided to practice a little bit of code live. Dropped down to 15 meters, threw out the following:

CQ CQ CQ DE N0YAX N0YAX N0YAX QRS K

I put the QRS in there so hams would know I had trouble copying code, and would send slower. I did that about 3 times, and this guy comes back at about 18 wpm all I could catch was N0YAX DE and from there lost it totally. I kept on trying to copy it, but finally got so frustrated that I just said forget it and left. What's the use of getting on the code bands if noone is going to send slow enough to copy it? I need lots of spacing, because I'm so new to morse I need time to hear the character and recognize it...It doesn't come automatically yet.

I thought the Novice code bands were so people could build up their code skills by actually using it. How are we supposed to do that if no one will drop their code down to our level? Come on guys, help out us new ppl struggling with the code!

73's everyone.

Yeah, I used to have more than a few QSO's like that when I was a novice.
The QRS doesn't usually work but try this; Send twice as slow as you can
receive. If you can receive 5 wpm then send at 2 wpm. This will give the
right impression and they either won't bother with you at all or else will
call you at 5 wpm which you can at least copy most of.
If they still won't slow down then just keep sending di-di-dum-dum-di-di
PSE QRS ES RPT. Don't let them intimidate you. The Morris racers are in
the Novice bands because there are no Novices in there anymore.

Got the Morris Code Blues
No one answers my CQ's

Ken:

This is not intended to be a debate. We just want to show that there are young hams out there and here, and that they are jumping in with both feet to communicate. It's a thrill to me to talk or communicate with the young guys. They often sound more professional than OF's. They want to belong, they want to learn, so lets bring them along, just as many of us were "brought along". I don't want to debate either. Different strokes for different folks - go the way you want, or that sounds best for you. Just stay between the lines when you color <HI, HI>.

Jeremy:

Please hang in there. I have been doing CW for four months and haven't run
into one of these jerks yet. There are probably 20 guys out there who will
slow down to your speed for every one who gets carried away. If he really
wanted to communicate with you, he would have slowed down. He wanted to
jerk your chain. The best way to keep that from happening is ignore him.
Just continue to send out a CW as if he weren't there. That is something
that will get him. He will probably spend the next 20 minutes checking his
amp, antenna connections, etc. to see why he wasn't getting out <heh, heh>.
Keep your humor and party on, Dude!

My cure to this problem a few years ago was to take the mixer away
from the wife. This still works great today. HI HI!!

Merry Christmas to everyone of us.

I get out on 40m now and again, and on the West coast (don't let that 1 fool ya ... I was living in MA when I got my license, but I'm a CA boy at hart) I hear LOTS of Novices & Tech Plusses ... Had many pleasant QSOs many of them with young hams. Ended up giving a radio to one high-school group starting a ham-radio club on campus. Wish there'd been one when I was in high school.

On a related note, I want to describe an interaction I saw in a popular ham radio dealer here in the bay area ...

Young fellow comes up to the counter. He's about 11 or 12, has his mother in tow. Idly chatting with someone else at the counter about how he's just about to take his exam, and is shopping for a radio for his birthday. Asks the sales-object (an extra) to explain a radio, and gets lectured (at great length) that "This isn't CB, ya know, kid, you get caught using this, and it's a $10,000 fine." One less young ham. With any luck, he'll persist and buy a radio at a swap. Last time I ever spent a dime in that place. (Although, I do go in now & again to see if anything has shown up on the bulletin board [cork not electronic])

I need a 2m mobile antenna and like to get comments about the MFJ
5/8 wave magnet mount antenna MFJ-1728B ($25).

Also, is the MFJ J Pocket Rollup antenna any good ($15)?

how about telescopic antennas for HT (MFJ-1714, $17) ? how does this
compare to the AEA hot rod ($25) ?

are the MFJ speaker mikes for HTs good ?

please email replies if possible.
thanks in advance.

And in a followup to the original poster of the help request, I've
sent this simple message (after a couple of get to know ya's first)

> The model number is KB-2355.
>
> It's a 23-channel SSB base station CB.
>
> I have an Antron 99 and ground plane, the match is 1:1.
>
> I'd just like to peak it up to the legal maximum. I don't
> want to run heat, but I want to get every little ounce I
> can under the four watt limit. Thanks.
>

Has anyone explained power ratios to you?

Here's a tech note (from me to you): Power ratios (or dB as they're called).

5 watts RF output power is the maximum legal power output
as measured into a 50 ohm load. Decibels or dB are a measure
of ratio. If you increase your power from 5 watts to 10 watts
the ratio is 2. In dB the number is 3. This is derived with
logarithmic methods.

10 * log(10) power(a)/power(b)

If you look at your S-meter on the radio, it is calibrated in
S-units from 1 to 9 and above 9 in 10 dB increments. Each S-unit
is typically (or should be) 6 dB or the equalivant of a 4 times
increase in signal power.

If for example, you are only S-7 on your buddy'sradio, to get
to S-8 (and this assumes your radio is putting out 4 watts now
you would need to increase your output to 16 watts. And again,
from 16 to 64 to get to S-9. A 10 dB increase is equavilant to
a 10 times power increase, so then (starting again at 4 watts and
S-7) to get to 10 dB over S-9 would require a total increase from
4 watts to 640 watts.

The quickest and easiest way to increase the effective radiated
power (E.R.P.) of your station is to see to it that the powr you do
put out goes in a direction that makes a difference. Obviously with
a vertical antenna, most of the power goes every where else but to
the person you wish to talk with. A simple dipole with split the
power evenly from towards and away from your target. More elaberate
antennas (Heh heh, Moon rakers etc) are just better at directing
all (well actually most) of the power in a single direction.

Now, back to your radio. Assume that it puts out 4 watts. If you peak things up to where it puts out the legal 5 watt max, you have about 1 dB of effective improvement. (Note your radio would have to be down to 1.25 watts to be a single S-unit below what 5 watts would result in.)

Still want to poke around in the radio? Do you have the service manual for it? Although most of these radios are generic once you open them up, I like to have a road map that matches the radio before I start twisting knobs and things.

Have a nice evening...
Jeff

P.S. I'm posting this followup to the rec.radio.amateur newsgroup as a sample of cooperation instead of the usual elitism shown towards others.

: >I put the QRS in there so hams would know I had trouble copying code and would
: >send slower. I did that about 3 times, and this guy comes back at about 18 wpm

: Yeah, I used to have more than a few QSO's like that when I was a novice.
: The QRS doesn't usually work but try this; Send twice as slow as you can
: receive. If you can receive 5 wpm then send at 2 wpm. This will give the
: right impression and they either won't bother with you at all or else will
: call you at 5 wpm which you can at least copy most of.
: If they still won't slow down then just keep sending di-di-dum-dum-di-di
: PSE QRS ES RPT. Don't let them intimidate you. The Morris racers are in
: the Novice bands because there are no Novices in there anymore.

You didn't really say - did you send him additional QRS's while/after he transmitted and try to coax him to slow down? I'm a relatively new amateur, and I've found that I naturally speed up when I'm sending, just because I can get a good rythem going, and I forget how fast the other guy was sending. :-)

Of course, there was the guy I tried to work a while ago.... he sent his call out at around 13wpm, and I came back to him. He then proceeded to send so slowly that I literally couldn't decipher what he was trying to say - and it sounded like he was just sending '-', to boot. Of course, every time he tried to turn the conversation around, he sent his call again at 13wpm. :-)

- Rich

5578. One Sad Christmas

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-22 03:38:52 UTC
From: fred-mckenzie@ksc.nasa.gov
Message-ID: <fred-mckenzie-211293223852@k4dii.ksc.nasa.gov>
Source record: 272955

Yes, Virginia, there WAS a Santa Clause. Reports have been slow to emerge, but here is what I've been able to piece together about his demise.

Do you remember the year when there were stories about Santa's sleigh running over little old ladies? I think there was even a song written about someone's grandmother being done-in that way. Apparently, that year was Santa's last trip. It seems that the reindeer were in an especially foul mood. It didn't help things, when someone started the rumor about Rudolph receiving special treatment just prior to the trip. Needless to say, reports of reckless sleigh driving came from all over the world that year.

That was the year I happened to catch Santa on 20 Meters, as he was returning home from the trip. He was operating as SANTA1, up near the top of the band, trying to unwind after the grueling delivery schedule. He did seem to be a bit grouchy, and complained about rebellious reindeer. We signed off as he arrived home. I happened to leave the receiver on, and noticed that someone had either left their VOX turned on, or sat something on their microphone button. I could hear noises in the background, as if someone tripped and fell down. It was followed by what sounded like hoofs pounding and someone screaming. Then it abruptly ended, as if someone had bumped the microphone and released the button.

In a few seconds, I recovered and put out a call to see what might have happened. After several tries, I heard an excited voice using the callsign, ELF27. He was too excited to say much then. But after about 20 minutes, he came back again. He proceeded to describe what he had found. Santa had apparently slipped or lost his footing, and fallen. Then, he was attacked by the team of 8 reindeer. Once Santa succumbed to the trampling, they turned their wrath toward Rudolph. ELF27 described a scene where body parts were everywhere, with Rudolph's bloody, still glowing nose lying in the gory snow.

ELF27 and I maintained a regular schedule for a long time after that. He kept me informed about the Elves recovering from their grief, and about efforts to find a replacement for Santa.

As you probably realize, most of the world is not aware this happened to Santa at all. One year later, there was a "new" Santa making the annual trip. ELF27 related that one of the other Elves (ELF45) was very good at politics. After the tragedy, he emerged as a natural leader, and had virtually no opposition.

The widow, Mrs. Claus, took a liking to him, and before the year had elapsed, they were married. Now, if you think it odd for a young Elf to go for an elderly widow, you must understand that although Santa was quite

old, he had outlived several wives. The widow, Mrs. Claus, was actually quite young and attractive, so ELF45 had no hesitation.

I haven't talked to ELF27 for some time. He did mention that ELF45 had adopted the SANTA1 callsign, and can sometimes be heard at the top end of 20 Meters, late Christmas Eve.

73, Fred, K4DII

NOTE: The Effective Sunspot Number for 20 DEC 93 was 41.0.
The Full Kp Indices for 20 DEC 93 are: 3o 2o 1+ 3- 2o 2o 3- 3-

SYNOPSIS OF ACTIVITY

Solar activity was low. Only an occasional C-class flare
has been noted during the period. Region 7640 (N10E57) shows
the most potential for flares.

Solar activity forecast: solar activity should continue to
be at a low level. Region 7640 is still capable of producing an
isolated M-class flare.

STD: A full-disk x-ray image from the Yohkoh satellite has been
appended to this report, showing the increased emissions
associated with Region 7640.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. Active to minor storm levels
were observed at high latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet throughout the forecast period.

Event probabilities 22 dec-24 dec

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 22 dec-24 dec

A. Middle Latitudes
Active 15/15/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 25/25/15
Minor Storm 10/10/05
Major-Severe Storm 01/01/01

HF propagation conditions have not changed over the last
24 hours. Low and middle latitudes continue to observe
near-normal propagation, while high and polar latitudes
continue to observe near-normal propagation except during the
local night and morning sectors where occasional minor signal
degradation is producing slightly below-normal conditions. No
changes are expected over the next several days. High and
polar latitude paths should see gradual improvements over the
next 72 hours as levels of geomagnetic activity drop to
generally quiet levels.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce

associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Jeremy,
I've been doing CW for 40 years and every once in a while I still have
some dipwad answer me at mach 9.5.

The great majority of the people that I meet on CW are fine folks and
are more than understanding.

Dont let the dummies get you down.

>Suggestions? Comments?

I am a node operator for one of the nodes in Ga Wing Civil Air Patrol's
packet communications system....

My node (GVL:GA0985 on CAP packet) is TheNet 2.10st and it's running on
an MFJ1270.... the surrounding nodes are KaNodes (KPC-3's).... (we're
in the process of converting all our KaNodes to netrom-style nodes...ka-node
was good and cheap and got us online rather quick). Anyway.... I do get
a some thruput trouble when talking to the Kanodes...but's it's not much..
and not enough to disrupt traffic greatly....our biggest problem with the
MFJ and TheNet is that the dadgum TNC puts out a birdie right on the CAP
packet frequency...(I done spun the little trimmer cap and fixed it, though).

I'm almost 23 on this end...I got my license when I was 17 and a Junior in
High school....(Got Novice and Technician within a month of each other).
A year later, I got my General and have been in a holding pattern since...

The problem I am having with my club is my age... I am the first young ham
they've had in a while that is highly active....always on the radio...operating
at field day, raising hell at club meetings, etc....

It seems that everytime there's a problem in the club, I'm the one to blame.
Shortly after I got my license, we had a problem with a TouchTone bandit on
the club repeater....all the OF's thought it was me..... even since, I have
been more active then 80% of the club members, yet I'm still passed up for
club nominations each year, passed up for control operator appointments,
special duties in the club, etc...

MMy club as yet to give me the respect that I deserve as a member and as a
person..everytime I open my mouth at a meeting, I'm met with a "That's nice
son" attitude and a motion to shut up... I'm cut off in mid sentence, etc...

I don't if other clubs are like that with their new young hams, but mine is bad...

Some of these old phartes need to learn that us new hams have plenty to offer and in no way are we threatening to the establishment... I've done plenty for my club, without return.... if they only knew what I was capable of... in the CAP, I am a group communications officer, a node operator, a repeater control operator and site custodian for the machine, I node op a ham node, (GVL07:n4tii-7 in Gainesville, GA - 145.07), I am in AF MARS, (afa2fh), and have been a region 2 net control station, a beacon station, a TEXN agent. I'm the AEC for the Hall County GA ares...etc etc etc.... but I'm just not qualified to serve as an officer in my club because "I'm too little!"

I've now found the table, which is included below, this is just showing designations. The waveguide sizes, freq ranges, designations is a separate table, which I can post if anyone is interested.

MIL	IEEE (std 521)	Revised	JCS	Hewlett Packard
Desc. Frequency	Desc. Frequency	Desc. Frequency	Desc. Frequency	Desc. Frequency
HF 3-30MHz	A 0-250MHz			
VHF 30-300MHz	B 250-500MHz			
UHF 300MHz-1GHz	C 500MHz-1GHz			
L 1-2GHz	D 1-2GHz			
S 2-4GHz	E 2-3GHz	S 2.6-3.95GHz		
F 3-4GHz				
C 4-8GHz	G 4-6GHz	G 3.95-5.85GHz		
H 6-8GHz	J 5.85-8.2GHz			
X 8-12GHz	I 8-10GHz	X 8.2-12.4GHz		
Ku (J) 12-18GHz	J 10-20GHz	M 10-15GHz		
P(Ku) 12.4-18GHz				
K 18-26.5GHz	K 18-27GHz	N 15-22GHz		
K 18-26.5GHz				
Ka 26.5-40GHz	Ka 27-40GHz	K 20-40GHz	R(Ka) 26.5-40GHz	
Q 33-50GHz	(Q) Q 33-50GHz			
U 40-60GHz	mm 40-300GHz	L 40-60GHz	U 40-60GHz	
V 50-75GHz	V 50-75GHz			
E 60-90GHz	M 60-100GHz	E 60-90GHz		
W 75-110GHz	W 75-110GHz			
F 90-140GHz				
D 110-170GHz				
G 140-220GHz

> Xy, or 3.90 to 6.20GHz.

I'm a bit suprised at some of these you mention from Sams. I know there are differences (see table I've just posted), but, for example, X-band, I've never seen it referred to as 5.2 to 10.9GHz - the usual is 8 to 12GHz, or 8.2 to 12.4 GHz - always something centred on approx 10GHz - a band with a long history of radar use. Similarly, K band 10.9 to 36, this is far to wide for a designation of this type - it is no coincidence that many designations cover the operating range of a standard (rectangular) waveguide size.

Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.info,sci.electronics,ne.forsale,rec.boats

** MROP and GROL exams in Cambridge MA ** Sat. January 8th 1994 **

The MIT Radio Exam Team will conduct exams for the General
Radiotelephone Operators License and the Marine Radio Operators
Permit. The exams will be held at 10AM Saturday January 8th
in MIT Room 1-150 at 77 Mass Ave in Cambridge MA.

A regular schedule of exams is planned for Cambridge MA. on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil.

Copies of the question pool are available from the Government
Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the moment.
A few copies are available for pickup in Cambridge.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard large ships and certain
aviation and coast stations.

At a later date exams will be available for the Commercial Radio
Telegraph operators licenses and the Global Maritime Distress and
Safety Systems (GMDSS) licenses. Amateur Extra Class operators may
be particularly interested in obtaining a commercial telegraph
license as they will receive credit for the 20 WPM 2nd class code exam.

The MIT Radio Exam Team operates under the auspices of the
National Radio Examiners COLEM, part of the W5YI group.

Speaking of annoying line noise/RFI, the security system in our house
is like a mini all-band transmitter and makes a real mess of
SW listening from 2mhz to about 10mhz. It's the digital pulses coursing
thru the wires throughout the house that does it. Bad buzz. You can tell
when someone activates a sensor or opens a doors since you hear the
warble change. Fascinating, but a real pain. Tried pulling the
powersupply out of wall in basement for the security sys, but it is
backed up by a batt. Anyone tried a ferrite choke on the lines
coming out of security sys to try to trap this rf junk?

Thanks,

Mike

There are two good ham stores in Northern VA: EEB on Mill Street in Vienna, and HRO in Woodbridge. EEB is bigger and has more stuff on display, HRO is often cheaper. Look in any issue of QST for their addresses, or call 411 information, or get on the 146.91 repeater for directions.

I am also attached to SkyTel's Skyword service and I have found it to be an excellent notification system. I am carrying a NEC FactsProvider which is an interesting pager. I have used the Motorola as well and both units have features in their favor. I have found the NEC to be a little easier to use but it doesn't track the date like the Motorola and there are no user programmable alert options. The NEC has an automatic backlight versus a manual one the Motorola.

As for SkyTel computer access, in addition to the touch-tone method, there are two other ways of contacting the system via modem. First, you can call 1-800-SKY-WORD from a dumb terminal/terminal program and enter text directly to the pager and perform all of the other functions as such as time-of-day. Second, you can call 1-800-SKY-MEMO and connect via a protocol known as TAP (Telelocator Alphanumeric Protocol). This protocol was designed to enable computers to talk to paging systems without having to deal with menu's and all the other nonsense a human would use. I got involved with alphanumeric

pagers though a midnight engineering project to tie my E-Mail system into pager's to provide wireless notification. I have a 'C' source code provided by SkyTel which implements TAP. It is a good example of how to use TAP.

I'm toying with the idea of building the "High Performance Communications Receiver" presented in chapter 30 of the 1994 Handbook. I haven't really checked for parts availability yet, so I don't know if that'll be a problem. The article begins by saying that this project was originally presented in QST, November 1981. It also says the project was "progressive", so I don't know if that means it spans several issues. Anyway, I'm making a short story long here. What I'm after is back issues of QST (the articles at least). I've checked at the public library here, but they don't subscribe. They told me it could take 4 weeks or more via inter-library loan because of t the holidays and staffing etc. If anyone could help, I'd be glad to mail a large SASE plus a couple of bucks for photocopying.

Please respond to lee@hvsun40.mdc.com

Thanks. (6 1/2 weeks and still waiting)

5593. DEP May Impose Fees On YOU!

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-22 15:07:56 UTC
From: magliaco@pilot.njin.net
Message-ID: <Dec.22.10.07.55.1993.18053@pilot.njin.net>
Source record: 272990

SB NJHAM @ ALLUSA $DEPE1
DEP May Impose Fees on YOU!

The Department of Environmental Protection and Energy in New Jersey is proposing a fee pertaining to owners of RF generating devices. In summary, the proposed rule will require the owners of sources of radio frequency and microwave radiation between the frequencies of 300 KHz and 100 GHz that have the potential of exposing either workers or the general public to radiation levels in excess of the regulatory limits specified in N.J.A.C. 7:28-42 _Radio Frequency Radiation_ and all owners of radio frequency and microwave heaters, sealers and industrial ovens to register those sources with the Department within 60 calendar days after the effective date of this rule.

The owners of all units that are subject to this rule shall be assessed an initial registration fee and will be required to provide technical information to the Department. After the first year of the program, the owners of registered units will be assessed an annual renewal fee. The amounts of the proposed fee are based on the services to be performed by the Department. A copy of the Department's calculations of the initial and annual renewal fee is available for inspection by the public at the Bureau of Environment Radiation, 729 Alexander Road, Princeton, New Jersey. The Department requests that any interested person telephone to make an appointment to review the documents.

A public hearing to discuss the rule will be held on January 11, 1994, beginning at 9:30 AM, in the Department's Public Hearing Room, 401 East State Street, Trenton, New Jersey. The Department will accept comments on the proposed regulations until January 20, 1994. Comments should be addressed to Janis E. Hoagland, Esq., Administrative Practice Officer, New Jersey Department of Environmental Protection and Energy, Office of Legal Affairs, CN 402, Trenton, New Jersey, 08625-0402. If you have any questions regarding the applicability of this rule to your organization, you may contact Ms. Deborah Wenke with Radiation Protection Programs at 609-987-2101.

Radio Frequency Protection Guides (RFPG) for whole body exposure

Frequency Range	Maximum Allowed Mean Squared Electric Field Strength (V/m)^2	Maximum Allowed Mean Squared Magnetic Field Strength (A/m)^2	Equivalent Plane Wave Power Density mW/cm^2
300 KHz-3 MHz	400,000	2.5	100
3 MHz - 30 MHz	4,000 (900/f)	0.025 (900/f)	900/f
30 MHz-300 MHz	4,000	0.025	1.0

300 MHz-1.5 GHz 4,000 (f/300) 0.025 (f/300) f/300
1.5 GHz-100 GHz 20,000 0.125 5.0

Notes:

1) f - frequency (MHz)
2) For near field exposure, both the mean squared electric and magnetic strengths shall be determined.
3) For frequencies below 300 MHz, both the mean squared electric and magnetic field strengths shall be determined.
4) At frequencies above 300 MHz, either the mean squared electric or magnetic field strengths shall be determined.
5) The applicable RFPG shall be averaged over any 0.1 hour interval.
6) Meansurement to determine adherence to the RFPG shall be made at distances 5 cm or greater from any object.
7) Where electromagnetic fields are present at more than one frequency or for broadband fields, the fraction of the RFPG incurred within each frequency interval shall be detrmined and the sum of all such fractions shall not exceed unity.

Although initial and annual registration fees are not outlined for Amateur Stations, Amateur Radio is mentioned in several sections of the DEPE proposal as being a significant source of radio frequency radiation that poses health risks to the general public. As a reference, the median fee for commercial users will be approximately $500 per antenna if this proposal is passed.

The proposed new rules will provide the Department with the financial and informational resources it needs to enforce the radio frequency radiation protection provisions of N.J.A.C. 7:28-42 and are therefore expected to have a positive social impact. The more familar applications of radio frequency radiation are AM and FM radio, television, amateur radio, microwave ovens, radar, microwave point-to-point and ground-to-satellite telecommunications links, and other communications services. Radio frequency and microwave sources are also widely used in industrial heating and sealing operations. The steady increase in the number of these sources, coupled with a better understanding of their biological effects on human beings, has heightened concerns in the scientific community and in the public about the potential adverse health effects from exposure to this type of radiation.

Nonionizing radiation sources have steadily increased in number and their uses have so diversified that a general increase in radiation levels in the environment has occurred. Extensive radio frequency radiation measurements made by the EPA have shown that the sources most likely to produce the highest environmental levels are television and radio broadcast stations. Other significant, but less intense, sources of radio frequency radiation are transmitting satellite earth station antennas, microwave point-to-point communications antennas, cellular telephone cell-site antenna base stations, amateur radio stations, navigational aids and radar. Radio frequency heaters and sealers are generally located indoors and it is not currently known how intense the radiation emmitted by these is outside the buildings in which they are housed. Because the new proposed

rules will support a staff to ensure that all of the aforementioned sources are in compliance with the radiation limits set forth in N.J.A.C. 7:28-42, the new rule will have positive impact of reducing the levels of nonionizing radiation in the environment.

I suggest that comments be directed directly to the Department of Environmental Protection and Energy of New Jersey as outlined above.

Those outside New Jersey aren't out of the clear on this issue because if this proposal passes, it could be justification for a national ruling on radio frequency radiation that could KILL Amateur Radio for good!

This request is being made for a friend of mine who doesn't have access to the net. Please respond directly to him at:

george.v.wilder@att.com

He is living in a 4th floor apartment while he is between houses and is considering an ISO-Loop antenna for 10 watt HF operation. He would appreciate information from anyone who has had experience with this antenna, or any other suggestions.

73,

John, WB9VGJ

>
>Some of these old phartes need to learn that us new hams have plenty to offer
>and in no way are we threatening to the establishment... I've done plenty for

<much deleted>

A data point.
They are out there, but something or someone has to draw their
interest. With the advances in electronics and communications, the
fascination of the crystal radio isn't the attraction it once was. I first
became acquanted with ham radio when a fellow student set up his rig
at a research site we were working at one summer (now 20 years ago). He
strung a dipole antenna between two lighting rods, and he was on the
air. We had a great time just watching and listening to him work the
bands (voice). But due to -many- other activities and interests, it was
never something I pursued (like I really need another hobby....).
It looks like I, and six to eight 11 and 12 year olds, may soon have
one, though. Tonight we take the written Novice exam, on our way to the
Tech No-code. My son's scoutmaster holds a General ticket, and for
several years (it could be *many* - he's been scoutmaster of this troop
for 25) he has been offering ham classes to any interested scouts. He
piqued my interest again when he worked the "Jamboree on the Air" from our
campsite in the Shawnee National Forest in southern Illinois. So when my
son (11) said he wanted to take the ham classes, I thought "here's my
opportunity", and it's a great father/son thing to boot. I asked if I
could sit in (the more the merrier - I'm not the first father to do it).
So we have been meeting once a week since October, going through the
question pool. The boys have been able to see and feel real equipment,
listen to transmission, and see packet radio in operation. Most will
probably not go on to learn code, because the idea of immediate
communication on 2m is more attractive right now. But so what? They all
will have learned some basic electric theory and have some understanding
of antennas, radios, and radio transmissions. The opportunity to
learn code will be available to them if they want it. Some will go much
further.
John's type of experience is what discourages young enthusiasts. The

older hams with "attitude" have to realize that these aren't the "good old days" any more. Electronics and communcations capabilities have improved exponentially in the past 30 years. 11 and 12 year old kids today know as much about computers as the older hams once knew about radios when they were that age.

My son's troop now has numerous licensed hams, although I don't know how many are active. I do know that several have joined the local amateur club and try to be active in that. And, it's all due to one "older" ham taking the time and effort to interest some kids in the hobby.

So, if everything goes well, we will all pass our Element 2 exam tonight. Wish us luck!

I've done that before... once I knew the other guy had my call down
right (i.e. he actually managed to send KC4WZK DE whatever), I'd speed
way up for the ID before turning it around. Most of the time, they
catch on to what I'm doing and respond in kind. Get the ID'ing over
with and get on with the QSO, that's what I say.

Slow CW is really fun when your call is KC4WZK and your QTH is Dawsonville,
GA. :-) You can bet I only send THAT once when we're 599. :-)

> whatever reason.

I'm currently studying on and off again for a tech no-code license in my free time. I have had a couple local hams make me feel unwelcome to the hobby since
I'm not learning CW yet.

I don't want to argue about learning CW. I understand why hams like CW. It low bandwidth and ability to send through distortion make it a very useful radio tool. It is also a part of the ham tradition.

But then again, I know tons of computer experts that never learned to program.
Why should Hams be limited on what they can achieve, because they don't want to learn CW. I would love to see the possibility of a General no-code class.

I do plan to start learn CW, if I enjoy the hobby (and if there is alot on short-wave DXing). But, as of now I only plan to use 2m hand-held for my amateur use, after I get my ticket (can't set up much more in my apartment building)

>ppl struggling with the code!

For me, 5 wpm is fun and 15 wpm is reserved for contests. I make contact with Novices who speed up when they hear my call. I often ask them to QRS.

For people who refuse to slow down, I sometimes respond to their rudeness by coming back with a computer generated 40 wpm to show them what it feels like. Funny thing, hardly any of them come back after that.

See you on 40m at 5 wpm... Cecil, kg7bk@indirect.com

Note that some of the channels have different frequencies for ship and
shore communication: I assume for full duplex. I forget which channels are
set up that way, but there are only a half dozen of them.

Proper CW etiquette dictates that you send at your copying speed and that you reply at the same speed that the CQer is sending at. If someone comes back to you at 18 WPM ask the to PSE RPT QRS. Just keep sending that until they get it that you want 5 WPM sent to you. Don't let QRQ ops get you down. Remember nobody started copying code at 20 WPM proficiency. Keep banging away and remember that the good ops will come back at your speed.

Of course, I'm assuming that you aren't CQing at 18 WPM. If you are sending at above your proficiency then you are going to have problems copying.

I'm sorry about your experience, but just remember you are not alone. I've had the same feeling, even though my father and grandfather have both had their tickets for a *long* time. (1959 and 1933, respectively.) Hang in there, and do what you want. If you never learn CW, you are still a ham and a valued part of amateur radio, no matter what some OFs may say.

>Why should Hams be limited on what they can achieve, because they don't

I agree, and some day it will probably happen, but it will be a while. Some people just can't accept that CW is not as important as it once was, and requiring it for tests is becoming very arcaic. (Please excuse the spelling...)

>I do plan to start learn CW, if I enjoy the hobby (and if there is alot on

Don't sweat it John. You could have it worse. My club has old farts that
want everything done for them. I was first nominated for president at the
age of 18. I declined because I was going to college. I have been the
Field Day Chairman for umpteen years, and an officer of some sort since I
graduated from college and returned to the area.

To put it mildly the elections are a railroad that nobody votes in. As soon
as someone gets nominated he is voted in by acclamation as everyone breathes
sigh of relief that they don't have to be in a position of reponsibility.

There are 100 members in this club. You would think people were fighting to lead, but not so. So I would say go find another club, or start your own repeater. A repeater will definitely take up your time. I work with 2 other guys that homebrewed a 2m/440 set of repeaters and it eats up all my time.

Good luck to ya. If you keep looking someplace you'll find a group that will welcome your talents and enthusiasm. Woe to the old "phartes" that are losing your expertises.

BTW, I was still the youngest in the club when I was 28. (almost 31 now).

5607. RAEM,UPOL etc Special Event from RUSSIA

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-22 17:01:07 UTC
From: uv3dcx@mosbos.msk.SU
Message-ID: <AAJr76juN5@mosbos.msk.su>
Source record: 273017

To: All whom it may concern

Since 1934 until early seventies hams had a chance
to contact amateur station with unique call sign - RAEM.
This one was used by Ernst Krenkel - well known polar
explorer. His contribution to the development of amateur
radio in the Soviet Union was a great one and he was the
President of the Radio Sports Federation of the USSR
since its foundation in 1959 until he suddenly passed
away in 1971.
The SRR (the Union of Radioamateurs of Russia) on
December 23, 1993 (0-24 UT) holds the Ernst Krenkel
commemorative QSO Party (he was born this day 90 years
ago). The object of this QSO Party is to contact on HF
bands (other than WARC) as much as possible stations
located above the Arctic Circle (4K2-4K4, UA, OH, SM, LA,
OX, VE, KL), in Antarctic (any - KC4U, 4K1 etc) and
special commemorative stations (RAEM, UPOL, R1SRR-R0SRR -
they will on the air during the QSO Party). No contest-
type exchange is required in this QSO Party - just send
usual "RS(T), QTH, NAME". Stations located above the
Arctic Circle are kindly requested to add to call signs
or to RS(T) letters AAC (Above Arctic Circle). Only one
CW and one SSB QSO per band are valid for this QSO Party.
Each QSO gives 1 point for final score. Logs should
include time, call, RS(T) - transmitted, RS(T) -
received. Send them to the SRR (Box 59, Moscow 105122,
Russia) not later than January 22, 1994. Entries (only
all band category): multi OP - single TX, single OP, SWL.
Winners in each DXCC country will recieve the SRR
diplomas. Stations with world highest results will
receive commemorative plaques.

5608. Re: Designations for microwave bands?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-22 17:11:10 UTC
From: tomb@lsid.hp.com
Message-ID: <CIG52n.Hzp@hpcvsnz.cv.hp.com>
Source record: 272984

Steven Davies (davies@mobira.nmp.nokia.com) wrote:
: Tom Bruhns (tomb@lsid.hp.com) wrote:
: > Sams' "Reference Data for Engineers" has such a list in the seventh edition
: > on pg 1-4. For example, X band is 5.20GHz to 10.90GHz, K band is
: > 10.9 to 36 (with Ku at 17.25). A footnote says C band includes Sz through
: > Xy, or 3.90 to 6.20GHz.

: I'm a bit suprised at some of these you mention from Sams. I know there are
: differences (see table I've just posted), but, for example, X-band, I've never
: seen it referred to as 5.2 to 10.9GHz - the usual is 8 to 12GHz, or 8.2 to 12.4
: GHz - always something centred on approx 10GHz - a band with a long history
: of radar use. Similarly, K band 10.9 to 36, this is far to wide for a designation
: of this type - it is no coincidence that many designations cover the operating
: range of a standard (rectangular) waveguide size.

Well, though I don't work much at these frequencies, I was a bit surprised,
too--but I should perhaps point out that each of these bands is divided in
the table into many subbands. The bands give complete coverage from 225MHz
to 100GHz, as listed. Common useage may take "X" to mean Xx at 9.6-10, or
Xf at 10-10.25, or Xk at 10.25-10.9. There is a note in the text, "Letter
designations commonly used ro microwave bands (particularly in references
to radar equipment) are shown in Table 2. These designations have no
official international standing, ant various engineers have used limits for
the bands and subbands other than those listed in the table."

I should correct a mistake in my original posting on this: Ku is listed
as 15.35-17.25.

Here is more of the table, but still without any of the subbands:

Band GHz limits
.225
P
.390
L
1.55
S
5.20
X
10.90
K
36.0
Q

Just a thought about CW requirements and licences. The last I new, and quite possibly not so now, The novice and tech licences included some wonderful CW only bandspace (Pick your favorite band). Do new hams get access to these freqs without demonstrating rudimentary CW skills?

How about the opposite side of this argument. I.E. why should one need to know EE theory to upgrade from general to advanced and advanced to extra? While homebrewing is a vibrant part of the service, in these days of mass marketed radios, it is not essential. How about rewarding operating practice and amature service as an alternative method of upgrade. (Impracticality arguments welcome).

I mailed this list to the original poster, but since there seems to be
additional interest, I will post it here...
This shows the shore TX frequencies for the duplex channels, as well as
indicating which channels are affected by the US/International switch.

Marine VHF channel frequencies and usage

Weather Channels: (as in Icom IC-M55)
Wx1 162.550
Wx2 162.400
Wx3 162.475
Wx4 161.650 Marine 21B - CCG West Coast Weather Broadcasts
Wx5 162.425
Wx6 162.500
Wx7 162.525
Wx8 162.450
Wx9 161.775 Marine 83B - CCG Great Lakes & East Wx Broadcasts
Wx10 163.275
(Wx5 - Wx10 are not listed in the manual, but are in the radio)

The channel usage marked with an asterisk (*) are from tables in Icom IC-M2 and IC-M55 marine radio manuals, and are probably fairly "generic", and subject to change in different jurisdictions. Other channel usage is from my station licence for the Canadian West Coast, and from things overheard on the air. "Your usage may vary."

Channels marked (CCG) or (USCG) are for Canadian or US Coast guard authorized stations only.

Channel 70 is supposed to be reserved for a future selective calling distress and safety system, but is (illegally) being used for intership communications (even by the RCMP!)

The letters under "area" mean:
I: International only (non-US) according to Icom
C: Canadian usage
A: American usage

Channels with an "A" suffix are simplex operation on the ship transmit frequency of an international duplex channel.

Canada uses a "B" suffix to denote broadcast (one-way) use of the shore transmit side of an international duplex channel.

There are no repeaters (as hams know them) in the marine service . If you are willing to pay for a phone call, the telco might let you place a call to another vessel on the same (or different) channel, and so get the effect of a repeater.

>
>I'll try and dig out a table, I think I even have an ASCII tabular version
>with all the waveguide sizes etc.

It would be nice to see such an ascii tabular version posted. I have seen many
seemingly conflicting notations for the microwave bands, but have never run
into a definative table. I have one old Microwave Eng. Handbook that
has the following:

BAND FREQ RANGE (GHz)
J .3 - .5
L 1.0 - 1.88
S 2.3 - 4.1
C 3.6 - 6.4
XB 6 - 10.7
KU 11 - 19
K 26 - 28
Q 33 - 50

I have other books, however, that place certain frequencies in different bands than these. For example, one book put 1.7 MHz in the S band, another has the L band going from 0.5 - 1.7 GHz. Also many of the bands overlap, (particularly several that I left out). In other words, the definitions of these bands seems a bit random. It would be nice to see a more definative definition, if one exists.

5616. ?Phonetic alphabet for numbers?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-22 18:57:32 UTC
From: wejones@cbdcom.apgea.ARmy.MIL
Message-ID: <9312221357.aa00505@cbdcom.apgea.army.mil>
Source record: 272995

I suspect that what I'm looking for doesn't exist, but is there some
way to represent numbers phonetically? I have never thought of myself as
having a strange accent of speech problem, but I have a hard time getting
other stations to understand the number in my call, in particular when
I say "3" about 50 % of the time it is interpreted as "2", which is
strange since the two numbers don't sound similar to me. I can give the
letters phonetically, but the only way I have been able to represent
the number is to count it off, ie I say "3 like 1...2.....3... . It
is not too bad during normal qso's, but during contests or in a pileup,
when the other station, I will say "negative...correction on the call, it
is *.."3"..***" the other station will come back and say "qsl *.."2"..***",
and then say goodby and qrz for another station, leaving me with an incomplete
contact. It is very frustrating. I know some would say that this is a good
reason to use CW, but I'm not that desperate (or good at code) yet, although
I guess I could just say "number is dit dit dit da da".
Any suggestions?

Source record: 272997

One of the reasons for confusion is that different services define their own ranges based on their use. Since I primarily work with radar systems, I use the radar band definitions (such as X-band = 8.0 to 12.4 GHz) which is also how my equipment is specified (TWT's, SSA's and couplers, etc.). However, communications engineers define their bands based on the allocated service which is where the ~10 GHz range for X-band comes from. There was also a proposal to go to a new lettering system which went in order (A, B, C etc.) but no one around here seems to use that standard(?). Does anybody out there use it?

For what it's worth, these are the designations that I use:

L-band 1 - 2 GHz [Though really, anything below 2 GHz is ~DC :-)]
S-band 2 - 4 GHz
C-band 4 - 8 GHz
X-band 8 - 12.4 GHz
Ku-band 12.4 - 18.0 GHz
K-band 18 - 26.5 GHz

Pretty much anything above that we lump together as millimeter wave.

Yah, I don't get on HF much, due to lack of equipment, but I got in one CW QSO a couple of weeks ago at a friend's station. During the ten minute QSO, we had some guy tune up on our freq, two other guys jump in at about 30 WPM right on top of us, and ultimately had to sign with each other over two or three guys holding the key down on our freq. Nice, real nice.

I have two GE Mastr Exec. II units that I need documentation. The units
do not have control heads, and I have only one duplexer. I am wanting to
turn (hopefully both, guess I need another duplexer) these into 440 repeater(s).

I noticed that the internals of the units are quite different, one appears to
have much better design.

I have ftp capabilities if there is info on an anonymous BBS out there.

-Also, is the MFJ J Pocket Rollup antenna any good ($15)?

Sounds pricey. It is a twinlead J-pole; make your own from some 300 ohm twinlead and a length of 50 ohm coax with a BNC on the end. I think MFJ puts a ferrite bead on the coax at the connection to the twinlead.

>how about telescopic antennas for HT (MFJ-1714, $17) ? how does this
>compare to the AEA hot rod ($25) ?

I have never compared the two, but I use the MFJ half-wave telescoping as my base antenna (indoors). I made a bracket from some scrap aluminum and a BNC buklhead adapter and bolted it to the back of a bookcase. Good SWR and even works up to 50 Watts. Just be careful using it on an HT - it is 1 meter long!

-are the MFJ speaker mikes for HTs good ?

The little ones are junk (poor quality audio). The larger size works nicely.

Use a recording to give the call or even the complete exchange or at least the part that does not change. Sort of like a memory keyer for cw contesting. This could be set up using a digital recording so you would only need to push a button. I am sure the hardware is available.

Perhaps do your call phoenetically, then when you come to a number,
rhyme it with something, like:

"nancy three-as-in-tree john larry queen"

(your call being N3JLQ)

Hope it helps.

I found numbers easiest at 5WPM cuz you can count the dits/dahs, but
nastier like you say at 13wpm because they have more dits/dahs than
most of the other common characters, and at a higher speed tougher
to get, I would say 1, 2, 8, and 9 are tough because of the
high dot-to-dash ratio (is there such psychology??).

I guess the best thing is to get to the point you recognize
a sound rather than a series of dots/dashes. I know at
13WPM, 1 sounds a lot like a J, a 6 sounds a lot like a B, and
even 5 can be mistaken for an H.

Good luck.

Mike

Your question answers one I've had for years. Long ago I came
across a list of standard pronunciations for numbers. I don't
remember the source of the list, but it was something like the U.S.
Army Signal Corp or the ICAO.

The two digits which stand out in my memory are 3 and 9. The
recommended pronunciation for 3 was "THU-REE" and for 9 either
"NIE-YEN" or "NIE-NER".

I wondered why the regular, English pronunciation for 3 was
considered inadequate. I guess I now know!

Is a database of (US) repeaters available (for free or licensable)?
Something like what's used to generate the ARRL repeater directory
is what I'm interested in - presumably it's in some electronic form
already. Any leads greatly appreciated.

: Mike Blackwell -- ke3ig -- mkb@cs.cmu.edu

The Database of US repeaters is kept by individual coordinators in each state or region. There must be at least fifty of them. Once a year the repeater coordinators send in their part of the data to the ARRL. The ARRL compiles the data into a vary fine book known as the ARRL REPEATER DIRECTORY. Many of the individual coordinating groups copyright the material that is published.

Like your local phone book the info is only good as of the date of publication. It would be fair to say that twenty percent of the repeaters listed make a change each year. New ones going on line each week. Old ones fading away... Callsigns change, and they finally added ctcss tone to the two meter box on the mountain so we don't have to hear the one-ways from the guys in the next state.

Good luck if you think you can do the work of fifty groups....

>His apt. qualifies as the proverbial "geek"'s residence.

Ahhh. But Purdue itself has *always* been geek heaven!

When I was there (mid- to late-60s), my dorm, Cary Quadrangle,
had its own Ham station, W9CLY. Even though I had no license
('furriner in days when you need citizenship to get a license),
they gave me a key to the shack anyway, so I could do SWL'ing on
the trusty old Drake 2B. Spent many a cold Indiana night in
that shack, I did.

Cary Quad also boasted of the nation's first carrier current
radio station, WCCR.

Go Boilermakers.

I wish I could find my ICAO pronunciation guide, but I'm pretty sure 3,
4, 5, and 9 are the only numbers that are to be pronounced differently
than normal. I'm 95% confident in the following info:

3 "TREE"
4 "FOW-er"
5 "FIFE"
9 "NIN-er"

Of course, a lot of us in "FOW-er" land think "FOW-er" is a perfectly
normal pronunciation anyway!

SEV-en TREE!

5633. This Week in Amateur Radio returns on Omega Net...

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-23 05:29:25 UTC
From: KXKVI@delphi.com
Message-ID: <931223.01765.KXKVI@delphi.com>
Source record: 272898
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

FOR IMMEDIATE RELEASE

Community Video Associates, Inc., has announced that the weekly amateur radio newsmagazine/audio bulletin service "This Week in Amateur Radio" will return to the air on Saturday, January 1st, 1994, at 7:30 PM (EST). Negotiations with the new Omega Radio Network were completed December 22nd. Omega will carry "This Week in Amateur Radio" as part of their regular programing on the Galaxy III commercial communications satellite, transponder 17 (9H), 5.8 MHz wideband audio (4.040 GHz). Galaxy III is a Hughes HS 376 satellite located in geosynchronous orbit at 93.5 degrees west longitude. "This Week in Amateur Radio" is retransmitted "live" or by tape delay on HF amateur radio nets and VHF/UHF repeaters throughout North America. Community Video Associates, Inc., a non-profit, charitable, tax-exempt, foundation based in Albany, New York, produces the program. The service was curtailed November 27th due to loss of satellite facilities. CVA began producing the program last March.

CVA President George Bowen, N2LQS, announced that, after airing 39 weekly programs, the program will pick up right where it left off, with edition #40. "This Week in Amateur Radio" is hosted by Stephan Anderman, WA3RKB, who is also "TWIAR" Executive Producer. Some of the features carried each week are "The RAIN Dial-up", "DX Window" with John Yodis, K2VV, "The Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR, "YL Spotlight" with Carli Drake, WB1BTJ, "EZSATS" with Dave Mullenix, N9LTD, and "Amateur Radio Newsline". Adrian Sebborn, N1JWO, presents summaries of DXpeditions, DX activities, and special event stations. N2LQS provides the weekly propagation forecast and serves as the program's Technical Director. "This Week in Amateur Radio" also carries the latest ARRL, RAC, and AMSAT news bulletins with special emphasis on operating news, technological advancement, and national and international regulatory activites.

"TWIAR" is amateur radio's most comprehensive and up-to-date bulletin service; the only satellite-delivered bulletin service suitable for retransmission on amateur frequencies and serving as the activity's weekly "Evening News" or "60 Minutes". As in the past, satellite facilities on the Omega Radio Network will continue to be donated, at no cost, as a service to the amateur radio community. Expenses incurred by CVA in the production of the show continue to be offset by donations from individual amateurs, clubs, and repeater groups.

Weekly program summaries will continue to be circulated on amateur packet bulletin boards, FidoNet, GEnie, USenet, and Internet. If you have further questions, please contact Adrian Sebborn, N1JWO, George Bowen, N2LQS, or Stephan Anderman, WA3RKB via packet @ WA2UMX.#ENY.NY.USA, George Bowen via FidoNet node 1:267/103 or on the "ham" echo, or the "This Week in Amateur Radio" area in the Radio and Electronics Hobby area on GEnie (category 8,

topic 11). By landline, contact WA3RKB at 518/877-7374, N2LQS at 518/283-3665, or Adrian Sebborn, N1JWO, at 413/458-8219.

A friend of mine has an Icom IC-449H mobile 440Mhz rig, and is looking
for a mod to expand transmit down to 430 Mhz. (It only wants to work
between 440 - 450 Mhz).

If anyone knows how to do this, or has any other mod info for this
rig, please e-mail me.

Thanks much!

Hi everyone,
I'm ready to get a HT after getting my ticket and enough cash.
I've been looking some 2m HTs and kind of like Kenwood TH-28 and
Icom P2AT. I don't know how they perform though.
So, I would like to know which one is better or any good or bad
experience with them. How about the extended receive mod on P2AT?
How sensitive is it? Oh, I'm planning to use around San Francisco
bay area.
I would really appreciate any responses (post or e-mail).

Merry Christmas to all,
thanks,

winston.

Still, the ARRL seemingly must have the consolidated data in machine readable form prior to creating the printed version. If they were able to obtain whatever copyright is required to publish the printed version, might they not also obtain permission to create and sell a machine readable (MR) version? Production costs for a MR version ought to be less than those for the printed version, I would think. If they could sell an MR version for anything near the very reasonable cost of the printed version, it should be very popular. --Bill, NG3K

Indeed they are, and on a continuing basis. There's a strong ham contingent in
the astronaut corps, and they think SAREX is good stuff - which is the best
insurance we can get.

The next SAREX mission is the next shuttle mission, STS-60. Charlie Bolden,
the commander, has passed his Tech test, and is expected to get his ticket in
before the launch, and Sergei Krikalyev, U5MIR, will also be on this one. The
launch is currently scheduled for late January, but may slip some more.

So sorry to quote all of that.....this editor still gives me the willies!

I've gotten some email from a few folks that advise me to do the same thing...go find myself another club....chances are that's what I'll do... I'd like to start my own repeater, but the funding is a major setback...

One of these days I'll do it...and pee on the old club... we'll see how the new president does....he's supposed to be somewhat on my side...but if he passes me up for committee appointments like every other year, then screw them!!! I'm going down the road a few miles!

John

Oddly enough, there are only two band segments in all of amateur spectrum that are A1 only, and both are open to code test free amateur licensees. (50.0-50.1 and 144.0-144.1) But then the EME boys only need to know how to send 'O' and 'M' real slow.

>How about the opposite side of this argument. I.E. why should one need
>to know EE theory to upgrade from general to advanced and advanced to
>extra? While homebrewing is a vibrant part of the service, in these
>days of mass marketed radios, it is not essential. How about rewarding
>operating practice and amature service as an alternative method of
>upgrade. (Impracticality arguments welcome).

Well the amateur service requires that operators know enough regulations and radio theory to adjust their transmitters so that they operate legally. Amateurs are unique in being given blanket authority to make internal adjustments to their transmitters. The FCC wants assurance that they have an inkling of what they are doing. Thus the written exams on theory and regulations. In point of fact, there's no reason whatsoever for the Advanced or Extra class to exist. They serve no useful purpose since Generals and Techs need the same knowledge. Manual Morse exams are totally redundant since those who do Morse, by definition, have to know Morse, and it doesn't matter if those who don't do Morse know it or not. It's just one of many amateur operating modes. For those who must have an external validation of their self worth, W1AW has Morse runs that can get you a piece of wallpaper.

Returning to the origins of this thread, I think one of the problems faced by youngsters entering the service is that too many of the older amateurs are so insecure that they need this external validation of their self worth, and that they try to force their forms and rituals on the young people who just want to explore and expand their knowledge of radio to satisfy their own internal curiosity. This often kills the interest and excitment with which the youngster approached the service.

Indeed they are, and on a continuing basis. There's a strong ham contingent in
the astronaut corps, and they think SAREX is good stuff - which is the best
insurance we can get.

The next SAREX mission is the next shuttle mission, STS-60. Charlie Bolden,
the commander, has passed his Tech test, and is expected to get his ticket in
before the launch, and Sergei Krikalyev, U5MIR, will also be on this one. The
launch is currently scheduled for late January, but may slip some more.

I heard a guy promoting the use of the Q signal QHH some time ago. He
came up with it and has been using it as a shorthand for "Happy Holidays".
It's a lot shorter on CW, especially for us slow-pokes! I kinda like it
so I'm helping him promote it.

After seeing the ads and calling to get the fax, the ACE Communications AR-2500 wide range receiver is looking pretty good, with computer operation software and an RS-232 port, not to mention the $450 pricetag.
Has anyone out there bought or seen one? I have the tech specs, but how does it really do? I'm interested in any opinions on the BFO for SSB and how well that performs, how well it's put together and, of course, any mods.

Better yet, they could give it away, as they do with the net directory.

The net directory isn't in the best of formats (pretty much a copy of the printed version, rather than a database), but it can be read. I've found it useful. One of these days I'll get around to putting it into a dBase or tab-delimited format and uploading it somewhere. Has someone done that already?

Source record: 272880

Thanks for your reply Gary. It seems that we agree on the major points. To clarify, I hold a general class ticket, and have not upgraded simply because I have not been active since entering Grad school, and quite simply have not needed the extra [sic] bandspace of the upper two license classes.

My last comments on this thread. Gary is absolutely correct that one should ensure that his/her signal is clean, and that operation is lawful. No argument there at all. My point, is that the difference in privledges from general to extra is small in relation to the effort to upgrade. That is why I suggested some measure of Amateur service, which is theoretically why we have Amateur radio in the first place. (Well that sounds too much like griping, which is not it's intent)

As for youth joining the Amateur ranks, I think that exposure is the only way. Consider being a true elmer, i.e. open your shack and help put people on the air. At the very least, help your local club with CW classes or whatever. BTW, in relation to another ongoing thread, it wouldn't hurt if older hams would occaisionaly pass through the novice CW/HF freqs. I recall calling on 10 and 15M for some time without answer, and I had 7 and 6 element yagis at ~160 ft. Radio gets pretty boring if there is no one to talk with.

Best Holidays all,

> Galen, KF0YJ

I had one for a while (from ACE) and sent it back and got a
refund.

It came with a dead AC adaptor. They had to send me another.

To tilt the front up you put a little wire doohicky on the
front rubber feet. It kept falling off.

The display was poorly back-lit (actually side lit) and hard
to read: you had to be just about 90 degrees to the surface to
see it.

Some of the buttons had painted legends, others had what
looked like decals which might wear off.

I didn't try the computer interface. It was poorly documented
(some information was missing which ACE had to send separately).
It uses a VERY weird format, with a mixture of ASCII and binary.
You have to encode the frequency, mode, step width, etc, into a
binary format to program the unit. Possible, but not easy.

Performance on lower frequencies was very poor. It could pick
up the strongest AM and Short Wave stations, but not much else.
It picked up a LOT of noise from the internal microprocessor. You
could hear the background buzz change frequency each time you
pressed one of the keyboard buttons. An outside antenna didn't
help any.

Performance on higher frequencies was not much better. It
still picked up a lot of internal interference, and had very poor
image rejection. A lot of the 800 MHz band could not be received
because I got UHF TV station images.

I compared it with two Bearcat scanners (both hand-helds,
different models) in the middle of the parking lot where I work.
Both Bearcats clearly picked up signals I couldn't even find on

the AOR, even when I entered the frequency directly.

I have since bought an RS-2006 which has none of the above problems.

SB NEWS @ AMSAT $SPC1227
* SpaceNews 27-Dec-93 *

BID: $SPC1227

=========
SpaceNews
=========

MONDAY DECEMBER 27, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* AO-21 GOES MULTIMEDIA *
==========
As reported last week in SpaceNews, the RUDAK group of AMSAT-DL achieved another milestone with the development of more sophisticated software for the OSCAR-21/RUDAK satellite.

Although some key members are already very busy with P3D activities, much time has been invested to implement new attractive modes on AO21.

Besides the Voice Broadcast which was successfully used throughout the last year with several greeting messages in different languages, RUDAK is now capable of transmitting picture files in WEFAX compatible format. Unfortunately there is no camera onboard AO-21, so the pictures have to be uploaded first by the AO-21 command station.

Not only is RUDAK now capable of transmitting FAX pictures, the pictures themselves are uploaded and stored in JPEG format! They are also converted from JPEG to WEFAX format online by the RTX-2000 RISC processor during transmission, so not much memory is needed to hold the images.

JPEG compression gives an enormous reduction in file size compared to GIF picture format, without much loss in quality. This saves a lot of space in the 1MB RAMDISK and will also speed-up the upload time drastically.

RUDAK is also capable of holding several picture and voice broadcast files in the RAMDISK at the same time. They can be transmitted on a schedule mixed with FM-Mode and 1200 baud AX.25 Telemetry.

The "Multimedia" satellite premiere will be activated for the first time on December 24 and some special season greeting in voice and picture will be transmitted.

Stay tuned on AMSAT OSCAR-21 and be prepared for some surprises!

The RUDAK downlink center frequency is 145.987 MHz. The uplink for FM-Mode is 435.014 MHz. The WEFAX format is like METEOSAT WEFAX Specification (MGCS): FM, 2400 Hz Subcarrier frequency with double sideband AM modulation, 300 Hz start signal for 3 seconds, 450 Hz stop signal for 5 seconds, 800 x 800 Pixel Image format with 256 grey levels, 4 Lines/sec.

* MERRY CHRISTMAS and a HAPPY NEW YEAR *
AMSAT-DL, Germany and AMSAT-U, Russia

[Info via Peter Guelzow]

* SANTA GETS CLEARANCE *
==========
To all our friends who have participated in SAREX operations this past year:

The Kennedy Space Center has given clearance for Santa to land on the Shuttle landing strip. The folks in Mission Control have given their go ahead for deorbit burn and landing operations. Engineering has declared all systems operating properly and the range safety officer has cleared the landing area of all interfering craft. We are ready for final Christmas operations.

We trust that our friends in the north have taken good care of Santa's Reindeer during this past year and all systems are go.

We here at the Johnson Space Center and the SAREX team send our Seasons Greetings and Wishes for a Happy New Year.

[Info via Lou McFadin, W5DID at the NASA Johnson Space Center]

* 2 METER AMSAT NET *
==========
All interested are invited to check in to the WA2SNQ repeater satellite net, on the 147.075 MHz repeater in Dix Hills, Long Island. Beginners are welcome, as are old hands. We are especially looking for PACSAT users. There will soon be a Oscar 13 gateway in operation during good AO13 passes during net time. Please stop in and say hello Tuesday nites at 7 PM.

[Info via Scott, WB2UZR @ WA2NDV.#NLI.NY.USA.NA]

* CELESTIAL BBS NUMBER CHANGE *
==========
The telephone number of the Celestial land-line BBS system will change effective 6 January 1994 from 513/427-0674 to 513/253-9767.

[Info via WX8X]

* NEW AMSAT LAND-LINE BBS *
==========
Dave, KB9BNR has added a land line port to his packet radio BBS (QCBBS), a F6FBB packet BBS with three RF ports supporting RF data rates from 1200 to 9600 baud.

The BBS has a very nice satellite section containing realtime satellite tracking facilities as well as text files on each Amateur satellite. There

are also back issues of SpaceNews and ANS bulletins available, and Dave hopes to add a bigger hard disk soon and include much more information. There are also lots of other Ham Radio files on the system, such as radio mods, SWL frequency lists, and much more.

On your first connect to the system you will have read only status. You can send Dave a message if you would like full access to the system. Simply provide your name and callsign and select a password for your login and pass it along to Dave. The next time you connect, you will have full access to the system.

The telephone number is 309-797-3827. The BBS supports baud rates from 300 to 9600 baud, with 8N1 data format and is available 24 hours a day.

[Info via Dave, KB9BNR]

* FO-20 OPERATION SCHEDULE *
==========
The following is the FO-20 operation schedule for December 1993 through February 1994. During this period, the analog and digital transponder modes will on alternately for a week as they were in December.

ANALOG MODE:

15-Dec-93 7:41 -to- 22-Dec-93 8:05 UTC
29-Dec-93 8:30 -to- 05-Jan-94 8:50 UTC
12-Jan-94 7:30 -to- 19-Jan-94 7:50 UTC
26-Jan-94 8:20 -to- 02-Feb-94 6:50 UTC
09-Feb-94 7:15 -to- 16-Feb-94 7:40 UTC

The digital (Mode JD) transponder is available at all other times.

[Info via Kazu Sakamoto, JJ1WTK]

>would send slower.

I've never heard of putting QRS in with a CQ...strange. :-)

Anyways, the correct thing for the person responding to your CQ to do is to respond at the speed you're sending at. If you're sending faster than you can copy (which is *VERY* easy to do!), they're naturally going to respond sending faster than you can copy.... I'll never forget one of my earlier QSOs---I sent CQ too fast, had to tell the other guy to slow down, and was (politely) reminded not to send CQ faster than I could copy.

Now, if you were sending your CQ at speeds less than around 10 wpm (which I'm assuming, based on your comments that you need to hear the dits/dahs and then figure out what the letter is---that implies that you haven't passed the first ``barrier'', where you start hearing the letters instead), and someone responded at 18 wpm, they were out of line, and as someone else has suggested in this thread, you shouldn't have even bothered to respond.

> I thought the Novice code bands were so people could build up their code
> skills by actually using it. How are we supposed to do that if no one
> will drop their code down to our level?

Assuming you're not sending faster than you can copy (which, again, is very easy to do, even without realizing it), nobody should be responding faster than your CQ. If anything, you might hear people answer your CQ at a lower speed (I often did, and would slow down and answer them).

But remember this: some folks who are still only licensed to use the novice bands may well be considerably faster than 13 wpm. For example, when I started out on the novice bands, on 26 December 85, I could barely copy 5 wpm (I hadn't used cw since the test---I'd just used 2m). I got hooked on cw almost instantly, and by the time I upgraded to general on 1 March 86, I was running at around 18 wpm in the novice bands...and I didn't even realize it! I'd expected to have trouble passing 13 wpm, and I almost passed 20 wpm (1 more question and/or a few more correct characters would have done it). I almost fell asleep during the 13 wpm test....

So don't be upset when you hear people going fast in the novice bands.
But if they don't answer your CQ at the speed you're sending at (more
or less---a few wpm in either direction could be an honest mistake),
well, don't get upset even then---just don't bother with them.

Later,

It's highly unlikely that the FCC has suspended operations. More likely,
though, is that your application is in process and will be acted upon
when its turn comes.

As for your wait, some folks have waited 16-18 weeks for their license;
too, some have arrived in just four weeks. As I recall seeing here, 8-9
weeks comes closer to being the norm.

One of these days it'll arrive .... and when it does, it will be good for
ten years.

73 & Welcome to Ham Radio

>punctuation, I am in decent shape.

One suggestion: crank the speed way up, to say, around 22 wpm. The idea is
to make it such that the bits are flying so fast, that you can't possibly
count them, and you hear the "melody" of the entire character. Make up a
tape with five character number blocks, and have at it.

>qualified to serve as an officer in my club because "I'm too little!"

Not that bad -- rumor has it that you lost VP last year by <5 votes.
Perry's only 32, and he's prez. But to tell the truth, I think that

threatening the establishment is exactly what LARC (and most clubs, to tell the truth) need. Ham radio is in a rut. And from what I've heard from others, LARC is actually one of the better clubs around. Makes me wonder what the bad ones are like.

OK, how about you & me & Richard (and anyone else you can think of) get together at a BBQ joint and talk about what can be done. I've been hinting for a long time that LARC needs come competition -- I'm done with just dropping hints. You're not the only one disenchanted -- how many times have I been to a meeting this year? There are others.

>73 de John "pissed off at Lanierland Amatuer Radio Club" Reed, N4tii

In my case, more like "bored with" ... enough to air some dirty laundry in public, anyway. I'll type at you tonight or tomorrow, if I can connect to you (leave an alternate route on guess which .09 mailbox just in case).

Hoping to threaten the establishment real soon, I am --

ASA MEMBERSHIP INFORMATION

The Electronic Journal of the Astronomical Society of the Atlantic (EJASA) is published monthly by the Astronomical Society of the Atlantic, Incorporated. The ASA is a non-profit organization dedicated to the advancement of amateur and professional astronomy and space exploration, as well as the social and educational needs of its members.

ASA membership application is open to all with an interest in astronomy and space exploration. Members receive the Journal of the ASA (the JASA is a hardcopy sent through United States Mail and is not a duplicate of this Electronic Journal) and the Astronomical League's REFLECTOR magazine. Members may also purchase discount subscriptions to ASTRONOMY and SKY & TELESCOPE magazines.

For information on membership, you may contact the Society at any of the following addresses:

Astronomical Society of the Atlantic (ASA)
P. O. Box 15038
Atlanta, Georgia 30333-9998
U.S.A.

Introduction

If we want to find evidence for the existence of extraterrestrial civilizations (ETC), we must work out an observational strategy for detecting this evidence in order to establish the various physical quantities in which it involves. This information must be carefully analyzed so that it is neither over-interpreted nor overlooked and can be checked by independent researchers.

The physical laws that govern the Universe are the same everywhere, so we can use our knowledge of these laws to search for evidence that would finally lead us to an ETC. In general, the experimentalist studies a system by imposing constraints and observing the system's response to a controlled stimulus. The variety of these constraints and stimuli may be extended at will, and experiments can become arbitrarily complex. In the problem of the Search for Extraterrestrial Intelligence (SETI), as well as in conventional astronomy, the mean distances are so huge that the "researcher" can only observe what is received. He or she is entirely dependent on the carriers of information that transmit to him or her all he or she may learn about the Universe.

Information carriers, however, are not infinite in variety. All information we currently have about the Universe beyond our solar system has been transmitted to us by means of electromagnetic radiation (radio, infrared, optical, ultraviolet, X-rays, and gamma rays), cosmic ray particles (electrons and atomic nuclei), and more recently by neutrinos. There is another possible physical carrier, gravitational waves, but they are extremely difficult to detect.

For the long future of humanity, there have also been specula-tions about interstellar automatic probes that could be sent for the detection of extrasolar life forms around the nearby stars. Another set of possibilities could be the detection of extraterrestrial

artifacts in our solar system, left here by alien intelligences that want to reveal their visits to us.

Table 1 summarizes the possible "information carriers" that may let us find the evidence of an extraterrestrial civilization, according to our knowledge of the laws of physics. The classification of techniques in Table 1 is not intended to be complete in all respects. Thus, only a few fundamental particles have been listed. No attempt has been made to include any antiparticles. This classification, like any such scheme, is also quite arbitrary. Groupings could be made into different "astronomies".

The methods of collecting this information as it arrives at the planet Earth make it immediately obvious that it is impossible to gather all of it and measure all its components. Each observation technique acts as an information filter. Only a fraction (usually small) of the complete information can be gathered. The diversity of these filters is considerable. They strongly depend on the available technology at the time.

In this paper a review of the advantages and disadvantages of each "physical carrier" is examined, including the case that the possible ETCs are using them for interstellar communication purposes, as well as the possibility of detection activities of extraterrestrial

technologies.

Classification of Extraterrestrial Civilizations

The analysis of the use of each information carrier are deeply connected with the assumption of the level of technology of the other civilization.

Kardashev (1964) established a general criteria regarding the types of activities of extraterrestrial civilizations which can be detected at the present level of development. The most general parameters of these activities are apparently ultra-powerful energy sources, harnessing of enormous solid masses, and the transmission of large quantities of information of different kinds through space. According to Kardashev, the first two parameters are a prerequisite for any activity of a supercivilization. In this way, he suggested the following classification of energetically extravagant civilizations:

TYPE I: A level "near" contemporary terrestrial civilization with an energy capability equivalent to the solar insolation on Earth, between 10exp16 and 10exp17 Watts.

TYPE II: A civilization capable of utilizing and channeling the entire radiation output of its star. The energy utilization would then be comparable to the luminosity of our Sun, about 4x1026 Watts.

TYPE III: A civilization with access to the power comparable to the luminosity of the entire Milky Way galaxy, about 4x10exp37 Watts.

Kardashev also examined the possibilities in cosmic communication which attend the investment of most of the available power into communication. A Type II civilization could transmit the contents of one hundred thousand average-sized books across the galaxy, a distance of one hundred thousand light years, in a total transmitting time of one hundred seconds. The transmission of the same information intended for a target ten million light years distant, a typical intergalactic distance, would take a transmission time of a few weeks. A Type III civilization could transmit the same information over a distance of ten billion light years, approximately the radius of the observable Universe, with a transmission time of just three seconds.

Kardashev and Zhuravlev (1992) considered that the highest level of development corresponds to the highest level of utilization of solid space structures and the highest level of energy consumption. For this assumption, they considered the temperature of solid space structures in the range 3 Kelvin s T s 300 K, the consumption of energy in the range 1 Luminosity (Sun) s L s 10exp12 L(Sun), structures with sizes up to 100 kiloparsecs (kpc), and distances up to Dw 1000 megaparsecs (mpc). One parsec equals 3.26 light years.

Searching for these structures is the domain of millimeter wave astronomy. For the 300 Kelvin technology, the maximum emission occurs in the infrared region (15-20 micrometers) and searching is accomplished with infrared observations from Earth and space. The existing radio surveys of the sky (lambda = 6 centimeters (cm) on the ground and lambda = 3 millimeters (mm) for the Cosmic Background Explorer (COBE) satellite) place an essential limit on the abundance of ETC 3 Kelvin technology. The analyzes of the Infrared Astronomical Satellite (IRAS) catalog of infrared sources sets limitations on the abundance of 300 Kelvin technology.

Information Carriers and the Manifestations of Advanced Technological Civilizations

Boson and Photon Astronomy

Electromagnetic radiation carries virtually all the information on which modern astrophysics is built. The production of electromagnetic radiation is directly related to the physical conditions prevailing in the emitter. The propagation of the information carried by electromagnetic waves (photons) is affected by the conditions along its path. The trajectories it follows depend on the local curvature of the Universe, and thus on the local distribution of matter (gravitational lenses), extinction affecting different wavelengths unequally, neutral hydrogen absorbing all radiation below the Lyman limit (91.3 mm), and absorption and scattering by interstellar dust, which is more severe at short wavelengths.

Interstellar plasma absorbs radio wavelengths of kilometers and above, while the scintillations caused by them become a very important effect for the case of ETC radio messages (Cordes and Lazio, 1991). The inverse Compton effect lifts low-energy photons to high energies in collisions with relativistic electrons, while gamma and X-ray photons lose energy by the direct Compton effect. The radiation reaching the observer thus bears the imprint of both the source and the accidents of its passage though space.

The Universe observable with electromagnetic radiation is five-dimensional. Within this phase, four dimensions - frequency coverage plus spatial, spectral, and temporal resolutions - should properly be measured logarithmically with each unit corresponding to one decade (Tarter, 1984). The fifth dimension is polarization, which has four possible states: Circular, linear, elliptical, and unpolarized. This increases the volume of logarithmic phase space fourfold.

It is useful to attempt to estimate the volume of the search space which may need to be explored to detect an ETC signal. For the case of electromagnetic waves, we have a "Cosmic Haystack" with an eight-dimensional phase space. Three spatial dimensions (coordinates of the source), one dimension for the frequency of emission, two dimensions for the polarization, one temporal dimension to synchronize trans-missions with receptions, and one dimension for the sensitivity of the receiver or the transmission power.

If we consider only the microwave region of the spectrum (300 megahertz (MHz) to 300 gigahertz (GHz)), it is easy to show that this Cosmic Haystack has roughly 10exp29 cells, each of 0.1 Hz bandwidth, per the number of directions in the sky in which an Arecibo (305-meter) radio telescope would need to be pointed to conduct an all-sky survey, per a sensitivity between 10exp(-20) and 10exp(-30) [W m-2], per two polarizations. The temporal dimension (synchronization between transmission and reception) was not considered in the calculation. The number of cells increase dramatically if we expand our search to other regions of the electromagnetic spectrum. Until now, only a small fraction of the whole Haystack has been explored (w 10exp(-15) - 10exp(-16)).

TABLE 2: Characteristics of the Electromagnetic Spectrum

(All the numbers that follows each 10 are exponents.)

Spectrum Region	Frequency Region [Hz]	Wavelength Region [m]	Minimum Energy per photon [eV]
Radio	3x106-3x1010	100-0.01	10-8 - 10-6
Millimeter	3x1010-3x1012	0.01-10-4	10-6 - 10-4
Infrared	3x1012-3x1014	10-4-10-6	10-4 - 10-2
Optical	3x1014-1015	10-6-3x10-7	10-2 - 5
Ultraviolet	1015-3x1016	3x10-7-10-8	5 - 102
X-rays	3x1016-3x1019	10-8-10-11	102 - 105
Gamma-rays	r3x1019	s10-11	r105

Radio Waves

In the last thirty years, most of the SETI projects have been developed in the radio region of the electromagnetic spectrum. A complete description of the techniques that all the present and near-future SETI programs are using for detecting extraterrestrial intelligence radio beacons can be found elsewhere (e.g., Horowitz and Sagan, 1993). The general hypothesis for this kind of search is that there are several civilizations in the galaxy that are transmitting omnidirectional radio signals (civilization Type II), or that these civilizations are beaming these kind of messages to Earth. In this section we will discuss only the detectability of extraterrestrial technological manifestations in the radio spectrum.

Domestic Radio Signals

Sullivan et al (1978) and Sullivan (1981) considered the possibility of eavesdropping on radio emissions inadvertently "leaking" from other technical civilizations. To better understand the information which might be derived from radio leakage, the case of our planet Earth was analyzed. As an example, they showed that the United States Naval Space Surveillance System (Breetz, 1968) has an effective radiated power of 1.4x10exp (10) watts into a bandwidth of only 0.1 Hz. Its beam is such that any eavesdropper in the declination

range of zero to 33 degrees (28 percent of the sky) will be illuminated daily for a period of roughly seven seconds. This radar has a detectability range of leaking terrestrial signals to sixty light years for an Arecibo-type (305-meter) antenna at the receiving end, or six hundred light years for a Cyclops array (one thousand dishes of 100-meter size each).

Recently Billingham and Tarter (1992) estimated the maximum range at which radar signals from Earth could be detected by a search similar to the NASA High Resolution Microwave Survey (HRMS) assumed to be operating somewhere in the Milky Way galaxy. They examined the transmission of the planetary radar of Arecibo and the ballistic missile early warning systems (BMEWS). For the calculation of maximum range R, the standard range equation is:

R=(EIRP/(4PI PHImin))exp(1/2)

Where PHImin is the sensitivity of the search system in [W m-2]. For the NASA HRMS Target Search PHImin = 10exp (-27) and for the NASA HRMS Sky Survey PHImin w 10exp(-23) (f)exp(1/2), where f is the frequency in GHz. Table 3 shows the distances where the Arecibo and BMEWS transmissions could be detected by a similar NASA HRMS spectrometer.

TABLE 3: HRMS Sensitivity for Earth's Most Powerful Transmissions:

++

All these calculations assumed that the transmitting civilization is at the same level of technological evolution as ours on Earth.

Von Hoerner (1961) classified the possible nature of the ETC signals into three general possibilities: Local communication on the other planet, interstellar communication with certain distinct partners, and a desire to attract the attention of unknown future partners. Thus he named them as local broadcast, long-distance calls, and contacting signals (beacons). In most of the past fifty SETI radio projects, the strategy was with the hypothesis that there are several civilizations transmitting omnidirectional beacon signals. Unfortunately, no one has been able to show any positive evidence of this kind of beacon signal.

Another possibility is the radio detection of interstellar communi-cations between an ETC planet and possible space vehicles. Vallee and Simard-Normandin (1985) carried out a search for these kind of signals near the galactic center. Because one of the characteristics of arti-ficial transmitters (television, radar, etc.) is the highly polarized signal (Sullivan et al, 1978), these researchers made seven observing runs of roughly three days each in a program to scan for strongly polarized radio signals at the wavelength of lambda=2.82 cm.

Radar Warning Signals

Assuming that there is a certain number N of civilizations in the galaxy at or beyond our own level of technical facility, and considering that each civilization is on or near a planet of a Main Sequence star where the planetoid and comet impact hazards are considered as serious as here, Lemarchand and Sagan (1993) considered the possibility for detecting some of these "intelligent activities" developed to warn of these potentially dangerous impacts.

Because line-of-sight radar astrometric measurements have much finer intrinsic fractional precision than their optical plane-of-sight counterparts, they are potentially valuable for refining the knowledge of planetoid and comet orbits. Radar is an essential astrometric tool, yielding both a direct range to a nearby object and the radial velocity (with respect to the observer) from the Doppler shifted echo (Yeomans et al, 1987, Ostro et al, 1991, and Yeomans et al, 1992).

Since in our solar system, most of Earth's nearby planetoids are discovered as a result of their rapid motion across the sky, radar observations are therefore often immediately possible and appropriate. A single radar detection yields astronomy with a fractional precision that is several hundred times better than that of optical astrometry. The inclusion of radar with the optical data in the orbit solution can quickly and dramatically reduce future ephemeris uncertainty. It provides both impact parameter and impact ellipse estimates. This kind of radar research gives a clearer picture of the object to be intercepted and the orientation of asymmetric bodies prior to

interception. This is particularly important for eccentric or multiple objects.

Radar is also the unique tool capable for making a survey of such small objects at all angles with respect to the central star. It can also measure reflectivity and polarization to obtain physical characteristics and composition.

For this case, we can assume that each of the extraterrestrial civilizations in the galaxy maintains as good a radar planetoid and/or comet detection and analysis facility as is needed, either on the surface of their planet, in orbit, or on one of their possible moons.

The threshold for the Equivalent Isotropic Radiated Power (EIRP) of the radar signal could be roughly estimated by the size of the object (D) that they want to detect (according to the impact hazard) and the distance to the inhabited planet (R), in order to have enough time to avoid the collision.

One of the most important issues for the success of SETI observations on Earth is the ability of an observer to detect an ETC signal. This factor is proportional to the received spectral flux density of the radiation. That is, the power per unit area per unit frequency interval. The flux density will be proportional to the EIRP divided by the spectral bandwidth of the transmitting radar signals B.

The EIRP is defined as the product of the transmitted power and directive antenna gain in the direction of the receiver as EIRP = PT.G, where PT is the transmitting power and G the antenna gain. This quantity has units of [W/Hz].

According to the kind of object that the ETC wants to detect (nearby planetoids, comets, spacecraft, etc.), the distance from the radar system and the selected wavelength, a galactic civilization that wants to finish a full-sky survey in only one year, will arise from a modest "Type 0" (w10exp13 W/Hz, Rw0.4 A.U., Dw5000 m, and lambdaw1 m) to the transition from "Type I" to "Type II" (w2x10exp24 W/Hz, Rw0.4 A.U., Dw10 m, lambdaw1 mm).

Lemarchand and Sagan (1993) also presented a detailed description of the expected signal characteristics, as well as the most favorable positions in the sky to find one of these signals. They also have compared the capability of detection of these transmissions by each present and near future SETI projects.

Infrared Waves

There have been some proposals to search in the infrared region for beacon signals beamed at us (Lawton, 1971, and Townes, 1983). Basically, the higher gain available from antennas at shorter wavelengths (up to 10exp14 Hz) compensates for the higher quantum noise in the receiver and wider noise bandwidth at higher frequencies. One concludes that for the same transmitter powers and directed

transmission which takes advantage of the high gain, the detectable signal-to-noise ratio is comparable at 10 micro-m and 21 cm. Since non-thermal carbon dioxide (CO2) emissions have been detected in the atmospheres of both Venus and Mars (Demming and Mumma, 1983), Rather (1991) suggested the possibility that an advanced society could construct transmitters of enormous power by orbiting large mirrors to create a high-gain maser from the natural amplification provided by the inverted atmospheric lines.

An observation program around three hundred nearby solar-type stars has just begun (Tarter, 1992) by Albert Betz (University of Colorado) and Charles Townes (University of California at Berkeley). These observations are currently being made on one of the two 1.7-meter elements of an IR interferometer at Mount Wilson observatory. On average, 21 hours of observing time per month is available for searching for evidence of technological signals.

Dyson (1959, 1966) proposed the search for huge artificial biospheres created around a star by an intelligent species as part of its technological growth and expansion within a planetary system. This giant structure would most likely be formed by a swarm of artificial habitats and mini-planets capable of intercepting essentially all the radiant energy from the parent star.

According to Dyson (1966), the mass of a planet like Jupiter could be used to construct an immense shell which could surround the central star, having a radius of one Astronomical Unit (A.U.). The volume of such a sphere would be 4cr2S, where r is the radius of the sphere (1 A.U.) and S the thickness. He imagined a shell or layer of rigidly built objects Dw10exp6 kilometers in diameter arranged to move in orbits around the star. The minimum number of objects required to form a complete spherical shell [2] is about N=4 PIrexp2/Dexp2w2x10exp5 objects.

This kind of object, known as a "Dyson Sphere", would be a very powerful source of infrared radiation. Dyson predicted the peak of the radiation at ten micrometers.

The Dyson Sphere is certainly a grand, far-reaching concept. There have been some investigations to find them in the IRAS database (V. I. Slysh, 1984; Jugaku and Nishimura, 1991; and Kardashev and Zhuravlev, 1992).

==========
2 - The concept of this extraterrestrial construct was first described in the science fiction novel STAR MAKER by Olaf Stapledon in 1937.
==========

Optical Waves

In the radio domain, there have been several proposals to use the visible region of the spectrum for interstellar communications. Since

the first proposal by Schwartz and Townes (1961), intensive research has been performed on the possible use of lasers for interstellar communication.

Ross (1979) examined the great advantages of using short pulses in the nanosecond regime at high energy per pulse at very low duty cycle. This proposal was experimentally explored by Shvartsman (1987) and Beskin (1993), using a Multichannel Analyzer of Nanosecond Intensity Alterations (MANIA), from the six-meter telescope in Russia. This equipment allows photon arrival times to be determined with an accuracy of 5x10exp(-8) seconds, the dead time being 3x10exp(-7) seconds and the maximum intensity of the incoming photon flux is 2x10exp4 counts/seconds.

In 1993, MANIA was used from the 2.15-meter telescope of the Complejo Astronomico El Leoncito in Argentina, to examine fifty nearby solar-type stars for the presence of laser pulses (Lemarchand et al, 1993).

Other interesting proposals and analysis of the advantages of lasers for interstellar communications have been performed by Betz (1986), Kingsley (1992), Ross (1980), and Rather (1991).

The first international SETI in the Optical Spectrum (OSETI) Conference was organized by Stuart Kingsley, under the sponsorship of The International Society for Optical Engineering, at Los Angeles, California, in January of 1993.

There have also been independent suggestions by Drake and Shklovskii (Sagan and Shklovskii, 1966) that the presence of a technical civilization could be announced by the dumping of a short-lived isotope, one which would not ordinarily be expected in the local stellar spectrum, into the atmosphere of a star. Drake suggested an atom with a strong, resonant absorption line, which may scatter about 10exp8 photons sec -1 in the stellar radiation field. A photon at optical frequencies has an energy of about 10exp(-12) erg or 0.6 eV, so each atom will scatter about 10exp(-4) erg sec-1 in the resonance line. If we consider that the typical spectral line width might be about 1 , and if we assume that a ten percent absorption will be detectable, then this "artificial smog" will scatter about (1A/5000A)x10exp(-1) = 2x10exp(-5) of the total stellar flux.

Sagan and Shklovskii (1966) considered that if the central star has a typical solar flux of 4x10exp33 erg sec-1, it must scatter about 8x10exp28 erg sec-1 for the line to be detected. Thus, the ETC would need (8x10exp28)/10exp(-4) = 8x10exp32 atoms. The weight of the hydrogen atom (mH) is 1.66x10exp(-24) g, so the weight of an atom of atomic weight n is nxmH grams.

Drake proposed the used of Technetium (Tc) for this purpose. This element is not found on Earth and its presence is observed very weakly in the Sun, in part because it is short-lived. Tc's most stable form

decays radioactively within an average of twenty thousand years. Thus, for the case of Tc, we need to distribute some 1.3x10exp11 grams, or 1.3x10exp5 tons, of this element into the stellar spectrum. However, technetium lines have not been found in stars of solar spectral type, but rather only in peculiar ones known as S stars. We must know more than we do about both normal and peculiar stellar spectra before we can reasonably conclude that the presence of an unusual atom in an stellar spectrum is a sign of extraterrestrial intelligence.

Whitmire and Wright (1980) considered the possible observational consequences of galactic civilizations which utilize their local star as a repository for radioactive fissile waste material. If a relatively small fraction of the nuclear sources present in the crust of a terrestrial-type planet were processed via breeder reactors, the resulting stellar spectrum would be selectively modified over geological time periods, provided that the star has a sufficiently shallow outer convective zone. They have estimated that the abundance anomalies resulting from the slow neutron fission of plutonium-239 and uranium-233 could be duplicated (compared with the natural nucleosynthesis processes), if this process takes place.

Since there are no known natural nucleosynthesis mechanisms that can qualitatively duplicate the asymptotic fission abundances, the predicted observational characteristics (if observed) could not easily be interpreted as a natural phenomenon. They have suggested making a survey of A5-F2 stars for (1) an anomalous overabundance of the elements of praseodymium and neodymium, (2) the presence, at any level, of technetium or plutonium, and (3) an anomalously high ratio of barium to zirconium. Of course, if a candidate star is identified, a more detailed spectral analysis could be performed and compared with the predicted ratios.

Following the same kind of ideas, Philip Morrison discussed (Sullivan, 1964) converting one's sun into a signaling light by placing a cloud of particles in orbit around it. The cloud would cut enough light to make the sun appear to be flashing when seen from a distance, so long as the viewer was close to the plane of the cloud orbit. Particles about one micron in size, he thought, would be comparatively resistant to disruption. The mass of the cloud would be comparable to that of a comet covering an area of the sky five degrees wide, as seen from the sun. Every few months, the cloud would be shifted to constitute a slow form of signaling, the changes perhaps designed to represent algebraic equations.

Reeves (1985) speculated on the origin of mysterious stars called blue stragglers. This class of star was first identified by Sandage (1952). Since that time, no clear consensus upon their origins has emerged. This is not, however, due to a paucity of theoretical models being devised. Indeed, a wealth of explanations have been presented to explain the origins of this star class. The essential characteristic of the blue stragglers is that they lie on, or near, the Main

Sequence, but at surface temperatures and luminosities higher than those stars which define the cluster turnoff.

Reeves (1985) suggested the intervention of the inhabitants that depend on these stars for light and heat. According to Reeves, these inhabitants could have found a way of keeping the stellar cores well-mixed with hydrogen, thus delaying the Main Sequence turn-off and the ultimately destructive, red giant phase.

Beech (1990) made a more detailed analysis of Reeves' hypothesis and suggested an interesting list of mechanisms for mixing envelope material into the core of the star. Some of them are as follows:

o Creating a "hot spot" between the stellar core and surface through the detonation of a series of hydrogen bombs. This process may alternately be achieved by aiming "a powerful, extremely concentrated laser beam" at the stellar surface.

o Enhanced stellar rotation and/or enhanced magnetic fields. Abt (1985) suggested from his studies of blue stragglers that meridional mixing in rapidly rotating stars may enhance their Main Sequence lifetime.

If some of these processes can be achieved, the Main Sequence lifetime may be greatly extended by factors of ten or more. It is far too early to establish, however, whether all the blue stragglers are the result of astroengineering activities.

Editor's Note: References to this paper will be published in Part 2 in the January 1994 issue of the EJASA.

5666. Re: heathkit support?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-24 00:09:45 UTC
From: carpentc@andrews.edu
Message-ID: <2fdc09$egf@orion.cc.andrews.edu>
Source record: 272896

In article <CIBHMv.8uB@fc.hp.com> keith@fc.hp.com (John Keith) writes:
>
>Is there any source available for finding parts replacements for Heathkip
>products? Has anyone picked up customer support for old heathkits?
>
>John Keith
>keith@fc.hp.com

I think I might be able to help you...Heathkit's plant and headquarters
is about 5 miles from where I live, and the phone books lists the
following:
* Heath Company
- Parts (616) 925-5899
- Service Repair (616) 925-3273
- Technical Assistance (616) 925-4914
- Order Department 1-800-253-0570
- Catalog Requests 1-800-444-3284

If you don't see what you are looking for, I'm sure the operators at any
one of the numbers will be able to direct you to the proper place.
Hope this helps!

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

Chart Start: Day #297

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

I have never heard of such a thing. You will need a terminal node
controller and radio for packet. Any modem should work for connections
to other computers through the phone line.

SB DX ARL ARLD070
ARLD070 DX news

Thanks to Tedd, KB8NW; Joe, NJ1Q; and the Ohio/Penn and Yankee Clipper Contest Club PacketCluster Networks for the items in this week's bulletin.

NEPAL. Kiyoko, NH6RT, is operating as 9N1KY from Kathmandu and will be there for another year or two. She is one of three new stations licensed in Nepal, 9N1HA and 9N1HP being the other two.

The only news on the UT4UZ and UB4LRQ DXpedition is that 9N1UZ was heard calling QRZ USA on 7009 kHz at 0130z.

RWANDA. Paul, F6EXV, and a friend are signing 9X5DX and 9X5CW. They are in the telecommunications field and operate only as their work schedule permits. Commercial equipment is all they have right now and cannot operate split. Check for them around 18135 kHz at 1530z.

QATAR. Chris, A71CW, has been worked on 160 meters between 1831 and 1834 from 2200 to 2300z. One Cluster spot was as late as 0125z. Also try 80 meter CW on 3511 kHz at 0310z, and SSB on 3800 kHz at 2240z. QSL to Chris Dabrowski, PO Box 22101, Doha, State of Qatar, Asia.

EGYPT. Mohamed, SU2MT, is active on the low bands. Try 3799 kHz between 1400 and 1500z; and either 1840 or 1845 kHz around 1930z. QSL via Mohamed Tartousleh, 496 Horeya Street, Bulkely, Alexandria, Egypt.

ISRAEL. Riki, 4X4NJ, is on 160 meter CW almost daily working North Americans. Check between 1830 and 1835 kHz, QSX up, around his Sunrise. A 160 meter maven, Riki needs only Zone 2 on this band for his WAZ.

WEST MALAYSIA. Neville, G3NUG, is planning a DXpedition as 9M2/G3NUG in January and February of 1994. His tentative schedule is to be on Pangkor, AS-072, from January 14 to 21; Langkawi, AS-058, from January 22 to 28; and Penang, AS-016, from January 29 to February 10. Listen for his SSB on either 14260 or 18140 kHz. QSL via G3NUG.

THAILAND. Reiner, DL2VK, will be signing HS0/DL2VK until January 31, 1994. Though active on all modes including PacTOR, he favors operating CW.

VANUATU. Listen for Rudi, DK7PE, to be operating from YJ soon. He was active last weekend from the Solomon Islands as H44/DK7PE.

NORTHERN CYPRUS. We preface this item with the necessary caveat that there is currently no DXCC credit for QSOs with 1B stations. Igor, KU0J, is operating mostly CW as 1B/KU0J. Listen for him on 80 meters between 0230z and 0330z; 40 meters between 1930 and 0330z; 20 meters between 1700 and 1800z; 17 meters between 1300 and 1430z; and 15 meters at 1400z. QSL via home call.

ERR IRE IN IRELAND. There is some erroneous information floating about regarding QSLing EI7M. The correct QSL Manager is EI5FT. NNNN

>Where are all the young enthusiasts?

N> They are waiting for the obsolete code requirements to be eliminated.

Nonsense. No real "enthusiast" would let 5 WPM or even 13 WPM stand in their way. Geez, I learned morse at 5 WPM in three evenings of casual practice; no reason why others can't.

5674. Re: ?Phonetic alphabet for numbers?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-24 13:27:38 UTC
From: root@jackatak.raider.net
Message-ID: <RwD3ec2w165w@jackatak.raider.net>
Source record: 272910

various people have chimed in:

Maybe I am totally off base, but I run almost exclusively 75-M mobile.
That means noise levels, atmospheric static crashes, and odd
propogation that require one to be alert and careful.

Knowing NONE of the circumstances, nor operating habits of the
original poster, I can, however, impute some behaviors from what I
hear on the bands...

During an attempted contact, with conditions below Q-5 copy, I
consistently hear a station give her/his callsign once phonetically
and once just plain letters and "over."

How in the hell, in marginal conditions, is it reasonable to expect
the other operator to put your call out from amongst the crud?

It is not.

Try instead, giving your call SEVERAL times, using standard and common
phonetics -- avoid the cutsey stuff *IF* you want the other station to
hear your callsign and copy it correctly.

In the case of the original poster, whose callsign was N3JLG (I think)
try:
NOVEMBER(pause)THREE(pause)JULIET LIMA GOLF(pause)
NOVEMBER(pause)THREE(pause)JAPAN LONDON GERMANY(pause)
NOVEMBER(pause)THREE(pause)JULIET LIMA GOLF(pause)OVER

Also, try other clues...like "from Pennsylvania, this is..."
and let your location, assuming you are still near your "home" call
district, help you out.

Rather than make the other station reach for you, assess the
conditions (by listening a lot more than you xmit) and try to gauge
how much phonetics and repeating the other chap will need.

When I worked Hawaii and Alaska on 75M mobile (100 watts into a tuned
vertical on the car) I got 5x5 signal reports...NOT because I was
loud, but because the conditions were rough and I made sure even a
hearing impaired person could copy my call through all the clutter on
the band.

Then again, I probably don't have a clue about what I am saying and
I've been doing it all wrong all these years! ;^)
73,
Jack, W4PPT/Mobile
(1 card shy of 75M SSB WAS from the Mobile -- Sure hope Santa goes

through Vermont on his way to Tennessee! ;^)

5680. Need info on building IF-232 for Knwd TS-850S

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-24 16:24:25 UTC
From: dihi@bsdihi.atr.bso.nl
Message-ID: <756750265snx@bsdihi.atr.bso.nl>
Source record: 272922

Hi there,

I have a TS450 S and connected my pc direct to the rig
without any problems..it is a little risky however.
The best solution is to buy an ic called MAX232 that converts
the TTL to RS232 level signals and back. I bought this IC for
just about two dollar or so, but still have to include it in the
cable between the set and computer. It requires NO external power
source what soever.

5681. Good Stores/Mail Order/Emergency Use in Car

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-24 16:44:18 UTC
From: dkk@cbnewsl.cb.att.com
Message-ID: <CIJt5v.5KG@cbnewsl.cb.att.com>
Source record: 272909

Folks,

I'm just getting started, so please excuse these elementary questions.

A bit of background; I have MS, just started using a wheelchair, so people have advised me that I should have emergency communications in my car just in case there is any excitement. I first explored cellular and CB. Cellular is expensive where I live (NJ) - $20/month for dialtone is the least expensive I've found so far. Dialtone basically is what I'm looking for since I want to listen to the radio or books in the car, not do business. But $20/month just for insurance seemed high. Also people didn't seem to hot on CB, particularly security.

Then I got a few suggestions to check out ham radio. The ham radio crowd seems far more genteel than the CB crowd. And the whole world of amateur radio from what I'm found out so far seems incredibly diverve and exciting. Also my 12 year old seems to be getting the bug, and he's the one who knows how to do all the "some assembly required" projects.

Two quick questions:

1. Are there any good stores in the New Jersey/New York area for ham radio equipment? Also good mail order? The people on the MS group got me hooked up to two incredible stores, one that has the patent on the particular type of hand control that I just put on my car, and one that attends all the trade shows and got me hooked up to this brand new breakthrough type of wheelchair. So I'm looking for "the best" like this on amateur radio equipment too.

2. The major question: would ham radio do what I need for application number 1: summon emergency help if I had a problem with my car? Note I'm not looking for 100% reliability. Mostly I travel on the Garden State Parkway, which is very well patroled, so I'm looking for 80-95% reliability (I'm also still ambulatory enough that I can get a ways, albeit slowly with a pair of crutches). I am willing to tradeoff something not quite as easy as cellular for something with a lot more potential, which it seems like ham radio would offer.

Please let me know your thoughts.

Thanks.

Dave

!!END-DATA!!

NOTE: The Effective Sunspot Number for 22 DEC 93 was 38.4.
The Full Kp Indices for 22 DEC 93 are: 2- 1o 2- 4o 3+ 2- 2o 2-

SYNOPSIS OF ACTIVITY

Solar activity was low with Region 7640 (N10E34)
producing most of the activity in the form of numerous C-class
flares. Rgn 7635 (N02W44) and rgn 7641 (N05E33) appear stable.

Solar activity forecast: solar activity is expected to
be low. The interaction of rgns 7640 and 7641 could produce
M-class acivity as they transit the disk.

The geomagnetic field has been at quiet to unsettled levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled.

Event probabilities 24 dec-26 dec

Class M 25/30/30
Class X 01/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 24 dec-26 dec

A. Middle Latitudes
Active 10/05/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 01/01/01

HF propagation conditions continued to be mildly
degraded over the high and polar latitude paths. Some weak
strengthening of the ionosphere may take place over the next
several days due to gradually increasing solar flux levels.
Middle latitudes have experienced and should continue to
experience near-normal propagation. No changes are forseen
over the next 72 hours, through 26 December inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce

associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Ken,

Just TELNET the address given in my earlier message. It should not matter what computer you are using as long as you have Internet access.

Dennis

>
>Nonsense. No real "enthusiast" would let 5 WPM or even 13 WPM stand in
>their way. Geez, I learned morse at 5 WPM in three evenings of casual
>practice; no reason why others can't.

5 wpm is as arbitrary a speed as 20 wpm. What if the rules say that you have to pass 20 wpm to get access to HF? And, really, some of us only had to practice a couple of weeks to attain that speed and no real "enthusiast" would let a wimpy thing like that getting in their way. Do you then still think that a Morse requirement is a good idea? What if I think it is a good idea, and that you should live by that rule too?

There has been arguments made that 1 wpm is not a useful speed. Hey, people, for a person who will never use Morse, 100 wpm is not a useful speed.

I am really tired of the "I can do it, so can you" or the "a six year old could do it, so should you." Show me a six year old who is mature enough to distinguish between a useful skill and a skill that is not.

I have asked for this info before without a response. I am also interested in this information. I still buy the repeater directory but would like to also have an electronic eddition to make a custom sheet of repeaters for a trip.

NOTE: The Effective Sunspot Number for 23 DEC 93 is not available.
The Full Kp Indices for 23 DEC 93 are: 2- 3- 1+ 3- 3- 2+ 2- 3+

SYNOPSIS OF ACTIVITY

Solar activity was moderate. Region 7640 (N08E21)
produced two M1/1N flares maxing at 1507Z and 1815Z. No radio
activity was reported with these two flares. Numerous C-class
flaring has also occurred in this region over the past 24
hours. White light observations indicate 7640 has nearly
doubled in spot number and has grown significantly in area with
rapid penumbra development throughout the region. Two new
Regions were numbered overnight -- Rgn 7642 (N10W20) and Rgn

7643 (S16E69). All other regions were stable. One other item of note to pass on: just minutes ago, Santa Claus was positively identified on radar leaving the polar cap and passing through the auroral oval. Any minor disturbances in ionospheric signatures should be attributed to this seasonal phenomenon.

Solar activity forecast: solar activity is expected to be moderate. Continued development in Region 7640 should produce more M-class activity with a slight chance of X-class activity.

STD: Big Bear reported new positive polarity flux emerging just slightly southwest of the main negative polarity leader flux. If this feature persists, it could result in additional C and M class flare activity and may even possibly provide a mechanism for a stronger event. This region now encompasses an impressive 73 spots and is bright in x-rays, as illistrated in the appended full-disk Yohkoh x-ray image. A small and potentially mildly geoeffective southern hemisphere coronal hole crossed the central meridian over the last 24 to 36 hours. Although it is still difficult to discern, there appears to be a moderately large coronal hole to the east and north of Region 7640, just now rotating into view.

The geomagnetic field has been at quiet to unsettled levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet.

Event probabilities 25 dec-27 dec

Class M 60/65/70
Class X 05/10/10
Proton 01/05/05
PCAF Green

Geomagnetic activity probabilities 25 dec-27 dec

A. Middle Latitudes
Active 10/10/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/15
Minor Storm 05/05/10
Major-Severe Storm 01/01/01

STD: HF propagation conditions have not changed over the last 24 hours. High and polar latitude regions continued to observe occasional periods of minor signal degradation (poor propagation). Middle and low latitudes experienced near-normal

propagation. There was a confirmed minor SWF on frequencies as high as approximately 10 to 12 MHz at about 18:15 UTC. No changes are expected over the next 72 hours. SWF activity will remain quite possible over daylit paths throughout the next several days.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,

EPL = Eruptive Prominence on the Limb.

N> It took me 6 weeks of intensive work to get to 5 WPM, and 2 more years
N> to reach 13 WPM, but I agree that I was extraordinarily motivated to
N> get the amateur license and I wasn't going to let the code stop me.

Hello Gary. The point I was trying to make was that it has NEVER been easier to obtain an amateur license than it is now. When I see people say that they'd LIKE to enter amateur radio, but won't/can't because of the code requirement, I do a double-take! I really expected to see an end to this kind of whining with the advent of the no-code ticket, and am amazed to see it thriving almost three years later. Considering that most future amateur contributions to radio arts will take place above VHF, the Tech privileges are very broad, and are only 45 easy questions away from everyone.

N> However, not everyone has an easy time with Morse, and some have
N> learning quirks that make the sounds run together or even reverse,
N> a sort of aural dyslexia. To them it's more than hard, it's often

Anyone with a learning disorder and a doctor can get a code waiver by just making an appointment. I know a few people who have gotten one by simply picking up the phone and telling their doctor they need it! How much easier does it have to be before all these "enthusiasts" get their long denied licenses?

N> are born to be guitar players, others are forever doomed to be a
N> beat behind. Manual rhythm skills aren't something that people

Code at 5WPM is hardly rhythmic. Count the damn dits and dahs, pass the silly test and move on. If someone can't even do that, surely they are a good candidate for a code waiver. Again....move on, and start enjoying the hobby!

N> code, even at 5 WPM. He's a ham now though, at least in a limited
N> fashion, thanks to the code test free Tech license. So there are
N> people who can't easily learn Morse, or even learn it at all, but
N> who still have a burning desire to be hams.

See above mention of code waivers....the means to accomodate such people is already in place, and there is no reason for anyone with a legitimate need to not take advantage of it. I applaud your friend for jumping in and getting his Tech, and I don't feel his license is as limited as you think.

I'm no code enthusiast...I seldom use it (have only about 50 or so CW QSO's under my belt) and am not very good at it. Furthermore I recognize it as a nearly obsolete mode that is primarily still alive for sentimental reasons. I just feel that an amateur license is a privilege to be earned,

not a right we are entitled to. Eventually the code requirements will be relaxed (if not dropped) and until that time people certainly have the right to protest and try to bring about change. But in the meantime, those who simply stay on the sidelines and refuse to take advantage of the alternatives (no-code tech and waivers) are only cheating themselves.

73 and Merry Xmas de Larry, KC6WOG

It took me 6 weeks of intensive work to get to 5 WPM, and 2 more years
to reach 13 WPM, but I agree that I was extraordinarily motivated to
get the amateur license and I wasn't going to let the code stop me.
However, not everyone has an easy time with Morse, and some have
learning quirks that make the sounds run together or even reverse,
a sort of aural dyslexia. To them it's more than hard, it's often
impossible, no matter how much they want the license. Some people
are born to be guitar players, others are forever doomed to be a
beat behind. Manual rhythm skills aren't something that people
universally have a natural ability to acquire. I have a friend,
an engineer, whose father is a long time ham, and who wanted to join
in on the fun he saw his father and I having, but he just couldn't.
No matter how hard the three of us worked at it, he couldn't get the
code, even at 5 WPM. He's a ham now though, at least in a limited
fashion, thanks to the code test free Tech license. So there are
people who can't easily learn Morse, or even learn it at all, but
who still have a burning desire to be hams.

>5 wpm is as arbitrary a speed as 20 wpm. What if the rules say that

>enough to distinguish between a useful skill and a skill that is not.

These are good points. I too am tired of that attitude. I know it isn't easy for many, and we've rarely heard from them until recently because *they weren't hams* due to the code barrier. That's changing a bit now thanks to the recent changes, but the attitude that "real hams do Morse", and it's "just laziness" that others don't, still persists.

Of course *some* people don't learn code for that reason, but others don't learn it because they find it very difficult, or because they don't see a need for it. The former is easy to understand. The latter is just as real a barrier, however. It's not laziness to not want to perform some mindless hazing ritual that you see no useful reason to perform. If more Morse addicts tried to sell Morse for the useful features it has, and there are a few, rather than merely erecting it as a barrier to entry into the wide variety of other modes available to amateur operators, perhaps some of those people who see it as hazing would change their minds. But they'll never change their minds if faced with the attitude expessed above. It's nothing less than raw ignorant bigotry.

Gary

Depending on the facilities in your area, ham radio would give you phone patch capabilities as well as possible contact with other hams. So it could satisfy your emergency needs as well as being a lot of fun -- which you seem to have discovered anyway. If you have both a phone with no service -- which you should be able to pick up for under $100 -- and ham radio, you will have almost guaranteed emergency communications.

5695. "Renewal" batteries -- a note

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-25 17:56:56 UTC
From: btoback@netcom.com
Message-ID: <btobackCILr6x.EEn@netcom.com>
Source record: 272828

I bought a set of "Renewal" batteries for my Standard C58 -- a portable all-mode 2m transceiver -- because it goes through them very rapidly. I wanted something that would last longer than NiCd batteries (and besides, my charger is in storage).

The C58 takes 9 AA cells: six in a nine-volt holder, and three in a 4.5v holder. When the radio is turned on, it runs on the full 13.5v; when it's off, the 4.5v is used to maintain the microprocessor memory. The problem with this arrangement is that the batteries in the three-cell holder discharge faster than the rest, so they can be subject to "reverse-charging" if the radio is operated after a period of disuse. (The three-cell battery will discharge completely after about two months with the radio off.)

When I tried to charge the three Renewal cells that were in the 4.5-v holder, the charger refused to operate. Even leaving the cells in the holder overnight, which is the solution recommended by the manual by for this problem, didn't work.

It turned out that the obvious thing worked in this case: I applied 9v from a handy 9v battery (I don't have much equipment here) to the recalcitrant cells for about a minute. The charger then accepted the cells, and they have come back to full charge. I don't know whether the total life of the cells have been affected by this treatment, but the solution should prolong the life of Renewal cells that have been accidentally subjected to reverse charging.

Meanwhile, I need to find something to do to prevent this from happening again...

>Meanwhile, I need to find something to do to prevent this from happening
>again...

Thanks for the inof. I am in the process of converting my nicad "arsenal"
to renewal batteries and any info would be helpful.

As for the reverse charging, try placing a diode in series with the 4.5 volt
pack. As no diode has infinite reverse resistance (0 reverse current) there
may be some reverse charging, but it might be low enough (also depends on
the interal resistance of the batteries) to fix your problem. Just about
any rectifer diode would do.

Ray-O-Vac aslo has a toll free info number and if you call when the enginers
are there, they will transfer you to one.

73,

Geoff.

SB SAT @ AMSAT $ANS-359.01
PHASE-3D FREQUENCIES

HR AMSAT NEWS SERVICE BULLETIN 359.01 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.01

The Phase-3D Transponder Frequencies Are Solidified

During the 3rd Payload Engineering meeting in Garching (near Munchen) the
following frequencies are determined for the P-3D International Satellite:

1. 21.210 MHz - 21.250 MHz uplink only (HF band)
Mode K

2. 29.330 MHz CAM (Compatible Amplitude Modulation)
Downlink only. (no transponder)
Spare Frequencies: 29.310, 29.320, 29.340, and 29.350 MHz
Mode A

3. 145.805 MHz - 145.995 MHz Uplink and Downlink: Mode V

4. 435.200 - 435.700 MHz Uplink 1
436.000 - 436.500 MHz Uplink 2
435.300 - 435.700 MHz Downlink
Mode U

5. 1268.5 - 1269.0 MHz Uplink 1
1269.0 - 1269.5 MHz Uplink 2
Mode L

6. 2400.5 - 2400.9 MHz Downlink
2400.1 - 2400.5 MHz Uplink
Mode S

7. 5840 MHz center frequency channel 25 kHz wide
Downlink only
Mode C

8. 10451.0 - 10451.5 MHz Downlink
Mode X

9. 24048 MHz downlink channel 25 kHz wide
Mode Ka

Each frequency passband is 500 KHz wide on the uplink and 400 kHz wide on
the downlink except the Mode V is divided in an analog segment and a

digital segment. The digital segment is in the lower frequency part of the band, the analog segment is in the upper frequency part of the band. The uplink segments are of equal width for both analog and digital modes. The down-link segment for digital modes is 150 kHz wide analog modes downlink is 250 KHz wide. The exact position of the beacons will be determined as soon as all relevant information is available.

These frequencies are FINAL and can only be changed for VERY good reasons.

Note that with the P-3D, the mode designations are changed according to Dick Janson WD4FAB designations:

Old Mode B = Mode UV
Old Mode J = Mode VU

To avoid confusion especially for newcomers, it is recommended that the new tranponder mode designations be used for all satellites.

[The AMSAT News Service (ANS) would like to thank Freddy de Guchteneire (ON6UG), IARU Satellite Coordinator, for this bulletin item.]

AO-21 GOES MULTIMEDIA!

HR AMSAT NEWS SERVICE BULLETIN 359.02 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.02

RUDAK/AO-21 Goes Multimedia!

The RUDAK group of AMSAT-DL achieved another milestone with the development of more sophisticated software for the OSCAR-21/RUDAK satellite.

Although some key members are already very busy with P-3D activities, much time has been invested to implement new and attractive modes on AO-21.

Beside the Voice Broadcast which was successfully used throughout the last year with several greeting messages in different languages, RUDAK is now capable to transmit picture files in WEFAX compatible format. Unfortunately there is no CCD camera onboard AO-21, so the pictures have to be uploaded first by the AO-21 command station. But not only is RUDAK now capable of transmiting FAX pictures, the pictures themselves are uploaded and stored in JPEG format! They are also converted online by the RTX-2000 RISC processor from JPEG into WEFAX during transmission, so not alot of memory is needed.

JPEG compression gives an enormous reduction in file size compared to GIF picture format, without to much quality losses. This saves a lot of space in the 1MB ramdisk and will also speed-up the upload time drastically.

RUDAK is also capable to hold several picture and voice broadcast files in the ramdisk at the same time. They can be transmitted on a schedule mixed

with FM-Mode and 1200 baud AX.25 Telemetry.

The "Multimedia" satellite premiere will be activated for the first time on December 24 and some special season greeting in voice and picture will be transmitted.

Stay tuned to AMSAT OSCAR-21 for some more surprises!

The RUDAK downlink mid-frequency is 145.987 MHz, Uplink for FM-Mode is 435.014 MHz. The WEFAX format is like METEOSAT WEFAX Specification (MGCS): FM, 2400 Hz Subcarrier frequency with double sideband AM modulation, 300 Hz start signal for 3 seconds, 450 Hz stop signal for 5 seconds, 800 x 800 Pixel Image format with 256 grey levels, 4 Lines/sec.

MERRY CHRISTMAS and a HAPPY NEW YEAR
AMSAT-DL, Germany and AMSAT-U, Russia

SKN IS COMING!

HR AMSAT NEWS SERVICE BULLETIN 359.02 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.03

YOU'RE INVITED TO THE 22ND ANNUAL "STRAIGHT KEY NIGHT ON OSCAR"

As you know, ARRL has for many years sponsored Straight Key Night (SKN) on New Year's Eve and New Year's Day; it is expected to do so again in 1994.

On New Year's Eve, 1972 (January 1, 1973 UTC), a few of us from the AMSAT 75-meter Net decided that we would try to combine the best of the old and the new in Amateur Radio by operating in Straight Key Night on what was then the brand-new communications satellite, AMSAT-OSCAR 6. Since then, proud "brasspounders" have kept the tradition going by operating CW on OSCAR using straight keys for at least a little while on every New Year's Day (UTC) when there's been an OSCAR to work.

You're most cordially invited to join in the 22nd annual celebration. It's entirely informal and unofficial; there are no rules, no scoring and no need to send in a log. Just call CQ SKN in the CW passband segment of any OSCAR satellite between 00:00 and 23:59 UTC on January 1, 1994, or answer a CQ SKN call from another station. This year, we're changing things a little: we'll also count QSOs made via the oldest, largest and most reliable communications satellite, OSCAR Zero, otherwise known as the moon. AMSAT didn't build it, but we can adopt it! Of course, all SKN operating must be done with a straight hand key.

Just as in the ARRL HF version of this event, we're conducting a search for the OSCAR SKN operator with the "best fist." Please send in a nomination of someone you worked; we'll announce the winner or winners via packet bulletin. Last year's winners were KB6A, W6HDO and W8JAQ. Nominations may be sent to Ray Soifer via packet to W2RS @ WA2SNA.NJ. USA.

NA, from Europe to W2RS @ GB7HSN.#32.GBR.EU, via Internet to w2rs@amsat.org, or by mail via his Callbook address.

[The AMSAT News Service (ANS) wold like to thank Ray Soifer (W2RS) for this bulletin item.]

AO-21 Sends Chrismas Greetings To All Radio Amateurs!

"Surprise is hardly the word for it", says AMSAT-NA President Bill Tynan (W3XO). Bill caught an AO-21 pass Thursday evening immediately after reading DB2OS's message about the Holiday activity on this versatile satellite. He was pleased, of course, to hear the Christmas carol, "Silent Night", coming from his speaker while tuned to AO-21's 145.983 FM downlink.

His first thought, probably like that of many others, on hearing any form of music on amateur frequencies was; "They can't do that!" Upon further reflection, he realized that, the prohibition against the transmission of music on Amateur Radio is a U.S. rule, not necessarily reflected by every other country. Since AO-21 was licensed by the Soviet Union and now by Russia, sending this form of Holiday greeting is subject to their rules.

So, Bill advises, just listen and enjoy. Please do not complain, about music on the ham bands to the FCC, the ARRL or AMSAT. But also, just because you heard it on an amateur frequency, don't relay it to you your friends via Amateur Radio.

On behalf of the organization, AMSAT-NA President Bill Tynan (W3XO) wishes satellite enthusiasts and all hams everywhere, season's greetings and the best of DX and good fortune in 1994.

SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.05

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955

MHz.

Date UTC Mode Phs NCS Alt NCS

3-Jan-94 0200 B 160 WA5ZIB N7NQM

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate NCS do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.06

First FO-20 Color Fax

With the Japanese FO-20 satellite placed into analog mode for the week 1st to 8th of December 1993, Ted G6HMS and Ian G0NKA employed daily 16:00-24:00 UTC passes experimenting at passing FAX pictures through the JA Mode transponder. Once the fine technique of holding the picture by following the Doppler movement on the downlink was overcome, the methodology worked well. Unlike voice transmissions where the ear can compensate for tonal frequency shift, computers decoding Fax signals are far more critical.

By Monday 6th December Ian and Ted had the best yet black and white picture throughput. They then followed this with a full color transmission that produced a 50% success rate. On Tuesday 7th December between 19:59 and 20:03 UTC, transmitting using JV-Fax 6.0 and receiving on the shareware version of Microfax, they succeeded in producing full colour throughput with better than 90% resolution.

On all experiments the LSB uplink used is 145.980 MHz. The downlink USB frequency produced is 435.820 MHz +/- Doppler. The uplink frequency is maintained throughout the pass and the downlink is tuned to compensate for the change of doppler shift.

Ian and Ted will be trying again between December 15th to Feb '94 whenever FO-20 is scheduled to be in analog mode. Please join them if you can. They look forward to seeing your pictures. Reports would be very welcome.

For schedules, Ian may be contacted via PACKET as G0NKA @ GB7DTX.GBR.EU.

[The AMSAT News Service (ANS) would like to thank G3IOR for this bulletin item. G3IOR can be reached at G3IOR @GB7VLS]

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 359.07 FROM AMSAT HQ
SILVER SPRING, MD DECEMBER 26, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-359.07

Weekly OSCAR Status Reports: 26-DEC-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Nov 15-Jan 31
Mode-B : MA 0 to MA 95 !
Mode-B : MA 95 to MA 180 !
Mode-B : MA 180 to MA 218 !
Mode-S : MA 218 to MA 220 !<- S Beacon only
Mode-S : MA 220 to MA 230 !<- S Transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 256 ! Blon/Blat 240/-5
Omnis : MA 250 to MA 150 ! Move to attitude 180/0, Jan 31
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current FO-20 operating schedule:
From December '93 thru February '94, the analog mode and the
digital mode will be on alternately for a week at a time.
ANALOG MODE:
29-DEC-93 8:30 -TO- 05-JAN-94 8:50 UTC
12-JAN-94 7:30 -TO- 19-JAN-94 7:50 UTC
26-JAN-94 8:20 -TO- 02-FEB-94 6:50 UTC
09-FEB-94 7:15 -TO- 16-FEB-94 7:40 UTC
DIGITAL MODE: Unless otherwise noted above. [JJ1WTK]

DOVE: At 05:30 UTC, 24-DEC-93, WD0E put DOVE back into the state where it is sending telemetry every 20 seconds. The RF output transmitter power is back up to about 3 watts. Also, in response to several inquries, the S-band transmitter is back on. There is also a season's greetings message in the text broadcast. [WD0E]

MIR: MIR has indeed been on voice recently! KB9BNR read that MIR has been QRT on voice for a long time. KB9BNR states it this has not been case. N9OUU worked Alexander Serebrov (R0MIR) two weeks ago as it passed over Davenport, IA. KB9BNR know this because everytime N9OUU works MIR, N9OUU calls him! Checkout KB9BNR's new landline BBS at (309) 797-3827. He has lots of AMSAT information.
[KB9BNR AMSAT Area Coordinator]

RS-12: The major solar event and Kp7 prediction produced some remarkable long distance sub-horizon paths for the RS-12 Mode 'K' satellite on

December 1st. GM4IHJ alerted G3IOR that he had been copying the 29.407 MHz beacon long before his calculated horizon AOS. G3IOR took the pass that showed a AOS of 13:15 UTC, but had excellent copy of the downlink and beacon from 1300 when the satellite was passing over Mexico right up the central United States, in line of sight range of all US and VE call areas. The extension continued until the satellite was over UA9, within range of UA0 and JA. Sadly (apart from G3IOR) there were no stations active on RS-12 over the period of study. It would appear that such conditions are produced just before solar storms, and as GM4IHJ and NM7M forecast, when the interplanetary field is reversed. In a follow-up status report on this event, G3IOR says the extended northerly polar subhorizon paths for RS-12 seem to have disappeared this past week, to be replaced by extensions to the normal LOS by up to eight minutes on passes going out between 180 and 240 degrees azimuth. G3IOR worked K1FX (SSB) and N4ZC (CW) plus several Europeans mutual sub-horizon. Heard but got away included KN4UI and VE3CRG. Within mutual horizon QSO's inluded GW3NXR, EI7AF, UA9WE, UA1AP, UB5OA, EA7CEZ, LA1IC, UA1ADY, DJ6EA, G3FBN, SP4DCA, ER1RR and OZ4ZO. [G3IOR]

PoSAT: G3AAJ reports that PoSAT will place it's amateur radio section on (38.4 KBauds?) on January 6, 1994. No OSCAR enumeration has yet been given (or sought?) for PoSAT. [G3IOR]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

NOTE: The Effective Sunspot Number for 24 DEC 93 was 52.3.
The Full Kp Indices for 24 DEC 93 are: 2o 1o 2+ 3- 3- 3- 2- 2-

SYNOPSIS OF ACTIVITY

Solar activity was moderate the past 24 hours. Region
7640 (N09E08) produced an M1/SN flare at 1756Z as well as
numerous C-class flares during this period. The region
continues to grow in white light while exhibiting increasing
inversion line complexity. All other regions are stable.

Solar activity forecast: solar activity is expected to be
moderate. With Rgn 7640 now showing a possible delta config-
uration in the main leader group, M-class flaring potential
remains high.

STD: An additional full-disk Yohkoh x-ray image has been
appended to this report, showing the large size and brightness
of the x-ray loop structures composing Region 7640. This
recent image casts doubt on the existence of an eastern
hemisphere coronal hole. More will be known over the next
several days as the suspected area rotates into a better
position for analysis. Region 7640 is capable of spawning a
major flare and bears watching closely.

The geomagnetic field has been at mostly quiet levels in
the mid latitudes with some active periods experienced at
higher latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be at mostly quiet levels for the next 24 hrs.

Event probabilities 26 dec-28 dec

Class M 65/70/70
Class X 10/10/10
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 26 dec-28 dec

A. Middle Latitudes
Active 10/15/15
Minor Storm 05/05/10
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/15/25
Minor Storm 05/10/15
Major-Severe Storm 01/01/05

HF propagation conditions were near-normal over the low
and middle latitude paths, and slightly below normal to
near-normal for night-sector high and polar latitude paths.
Conditions over the high latitudes are beginning to improve due
to elevated solar flux levels from Region 7640. The potential
for stronger or more frequent SWF activity is increasing as
this solar region shows greater overall complexity.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

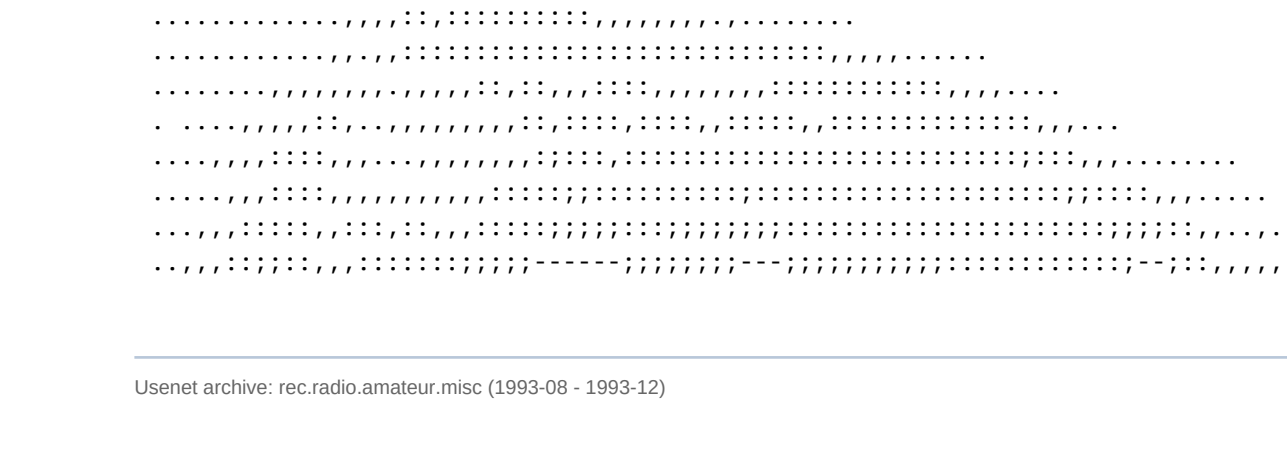
Acronyms used to identify sweeps and optical phenomena include:

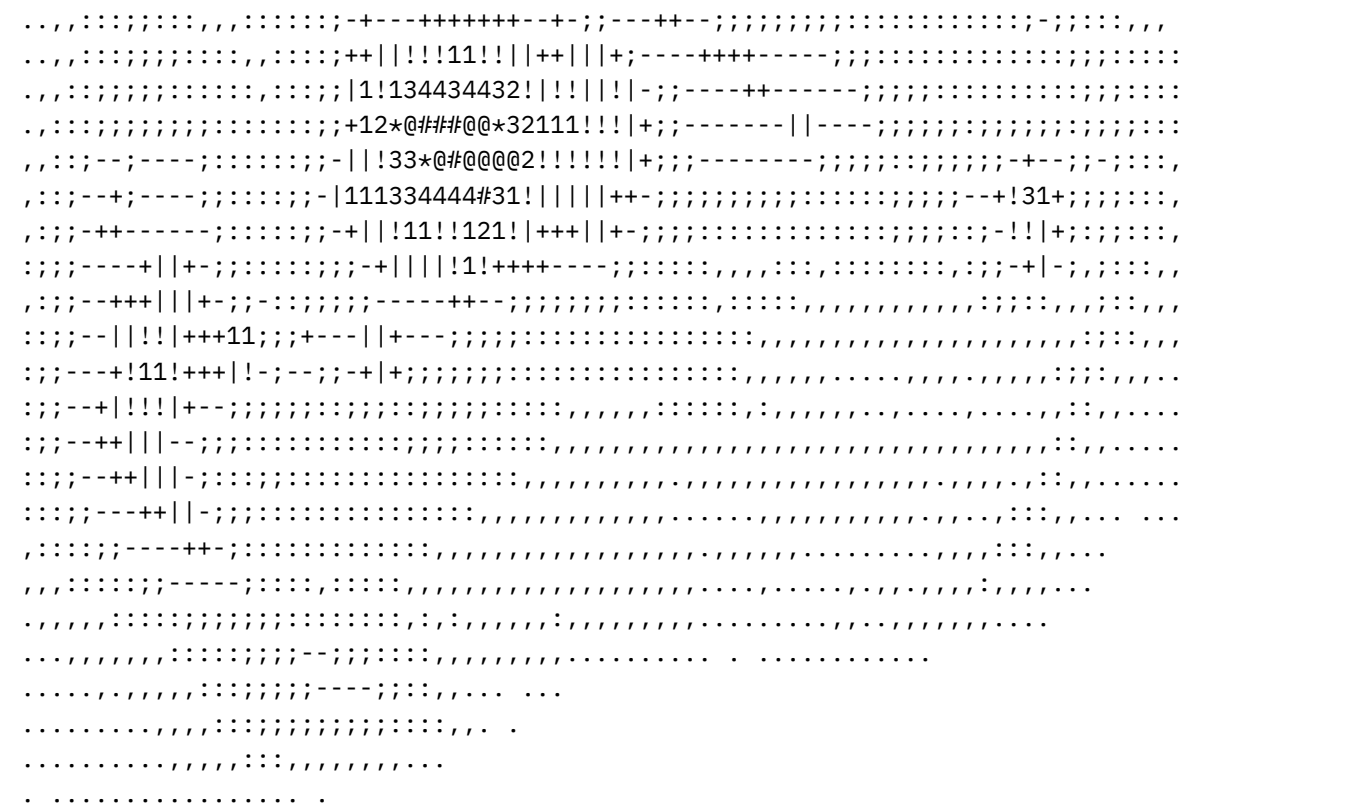
II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: CURRENT X-RAY EMISSIONS FROM THE JAPANESE YOHKOH SPACECRAFT
==========

25 December 1993, 04:40 UTC

North





South

KEY: East and west limbs are to the left and right respectively. Emission strength, from minimum to maximum are coded in the following way:

[space] . , : ; - + | ! 1 2 3 4 * # @

Units used are arbitrary, for illustrative purposes. Get "showasc.zip" from "pub/solar/Software" at the anonymous FTP site: ftp.uleth.ca (IP # 142.66.3.29) to view these images on VGA screens.

I think the code requirements should be relaxed. You're right in saying that the code speed is arbitrary. The emphasis should be placed on the theory, not how fast you can send and receive code. Some people have said that code is an old mode of communication. I don't agree with that reasoning but we need to look at what the ITU requirements say. As I recall, they only require a knowledge of the code but it doesn't say you have to send and copy at a certain speed. In other countries, the code requirements are not as strict as they are in the USA.

Here is some information on the code waver. You can't get it unless you have passed the 5WPM code test. There are some people who can't even do that because of learning disabilities. If these people are allowed to get a Novice, General, Advanced, or xtra they won't be able to use their privileges. The ITU requires *ALL* HF operators to know code.
I hope I have shed some light on the subject.

I don't know about stores in your area, but a good mail order place would be Amateur Electronic Supply (AES) at 1-800-558-0411.

I think amateur radio would be what you need. I hope you don't plan to use it just when you have an emergency, but if you're just going to do that, you will be cutting yourself from the friendly people that are on the air.

Good luck with getting the license.

Folks,

I am impressed!! From a post on Christmas Eve to now late Christmas day, I've received 6 followup mailings and one followup posting answering my question: from Sandy Lynch (WA6BXH), Mark Filteau (KD4GGP), Andy Funk (KB7UV), Sharon (KC1YR), Skip Sanders, Gary Coffman (KE4ZV), Bruce Toback (KN6MN). (Hope I didn't miss anyone, my apologies if I did). This is in addition to several people, Bob Witte (KB0CY), Richard Masoner, Mark Monninger, and Jim Jaworksi (VE4JAF) who scanned traffic on the telephony newsgroups where I started this conversation (as CB vs. cellular) and got me hooked up with amateur radio. (I've listed the call signs for the people who listed them in their mail - I'm sure almost all the others have them too, but I didn't see them in their mail). Thank you immensely to all who responded!

Basically, I'm totally sold on going with amateur radio for my needs (this is a highly personal decision - I must, must be very clear about this). The support and detailed answers from the dedicated people out there, the FAQ files on the ARRL server, the knowledge that the whole world is behind you in a very supportive way, some of the unique applications available on amateur radio, plus being a tinkerer by nature make amateur radio a win for me.

The absolutely least expensive way for me to go may be to get a cellular phone, don't activate it to any service, and it should work with 911. I didn't know this; none of the cellular services I talked to went out of their way to tell me about this. I just asked them for lifeline service, which is where the $20/month came in. (Note since 911 should work with an inactivated phone I might just have the $20/month for one year or so). I can afford the $20/month, but I had I difficulty in my own mind justifying $240/year even for one year (and originally I thought it was forever) for something that I might use once a year, especially where I do most of my driving on the Garden State Parkway, where the calvary is at most 10-15 minutes away. Plus trying to save up to put 3 kids through college. (As a contrast, I got several mailings from the cellular side asking how to get a $20/month service, which people thought was very inexpensive.)

Getting involved with ham/amateur (by the way is there a sensitivity of one vs. the other? - I'll use them interchangeably below and I apologize if this is a gaff) radio wasn't even close to the original question I was asking, which was CB vs. cellular. It never occurred to me all that was involved with amateur radio. But definitely for me amateur has skyrocketed to the number one choice. Basically it's the people, unbelievable!! And the technical aspects sound cool too. And I have 3 kids ages 6, 9, and 12 who have been involved with all kinds of home computers since birth. My wife is the only unenthusiastic person. Her brother was big into amateur radio, while they were kids together, and my wife had a license herself many years ago. I guess this is just old hat to her, but I'll find that application that will get her involved too.

Based on a first set of answers in comp.dcom.telecom.tech earlier in the week and the FAQ files (this is before the 7 new postings/mailings above), I went out and got just about all the books that Radio Shack had - an unplanned Christmas present for the family yesterday. My second post on rec.radio.amateur.misc was just being cautious; it sounded too good to be true.

Note I'm speaking strictly for myself here, and don't represent the views of my employeer. For people who need to make a receive a lot of calls from their cars or while on the move, cellular is a great service, and I am totally supportive of that, and so too is the American public. My profile/needs are different (I want to make/receive calls from the car only very infrequently) and based on the wildfire public acceptance of cellular now distinctly in the minority. That's cool, there's room for diversity.

So now it's time to hit the books! My biggest challenge over the next month is going to keep my 12 year old away from the ham radio books. He's a bigger electronic junkie than I am, but he has a big school project over the next month that he has to stay really focused on. Once that's over I think it's going to be a very healthy change for him to go from spending his spare time playing computer games on the PC and being hooked up to all the computer BBSs to being an amateur radio person! And we'll see how long it takes my 6 and 9 year olds to get licenses too.

Cheers, thanks for all your help, and Happy New Year all!!

Dave Kallman

P.S.: Thanks also for individual offers of help. I will get back to you separately on them.

P.P.S.: Excuse the rambling nature of the post above. It was already late tonight when I got on the computer and was overwhelmed by seeing the 7 new responses. I wanted to respond right away before going to bed, and I'm only semi-coherent now. It's much later now ;-).

I note from your sig file that you work for AT&T. Most
AT&T locations also have an active Ham club and sometimes
a permanent club station in the building. There's a very
active club in the Whippany AT&T location.

>So now it's time to hit the books! My biggest challenge

Why note study together, say 1/2 hour a day as a break from
that school project...all three of you...your son, your
wife and you. Then you can all go take the test as a family
event. Many, many 12 year olds have passed the Novice AND
Technician tests. If your son is into science, computers, etc.
he'll be able to study and understand the theory and regulations
without any real problems.

lawrence.goodwin@support.com claims:

>Anyone with a learning disorder and a doctor can get a code waiver by
>just making an appointment. I know a few people who have gotten one
>by simply picking up the phone and telling their doctor they need it!

I believe the original posting was another complaint about the
5 wpm code requirement, and unless the rules have changed very
recently you cannot get a medical waiver for that, only for the
13 and 20 wpm tests.

>I recognize it as a nearly obsolete mode that is primarily still alive
>for sentimental reasons.

This is pure baloney. CW has never been obsolete. You may not like
contesting, but for every phone contest there is a CW contest. The
best contesters are not interested in using obsolete modes, so why
do these contests still exist and generate so much activity? You may
not like DXing, but all major expeditions operate mainly SSB phone and
CW. Why would people spend thousands of dollars to activate a rare
country, aim to make as many QSOs as possible and then use an obsolete
mode to do it? Sure, there are a few phone-only expeditions, but there
are also CW-only ones. G3SXW spend 3 weeks on Tristan da Cunha and maded
23,000+ QSOs on CW and about 3 on phone. You think he did this just for
sentimental reasons?

Now I would say that AM is an obsolete mode, it has a few adherents but
it is spectrally inefficient and if all the people who use CW did so for
purely sentimental reasons you ought to find that a lot of those use CW
use AM in preference to SSB. They don't. There are no major contests
where anyone uses AM, there are no expeditions that use AM.

By your own admission, you have made about 50 CW QSOs in your life, yet
you want us to take your word for it that it is an obsolete mode. Did
someone tell you this or did you conclude this by yourself after 50 CW
QSOs at 5 wpm? I would agree that 5 wpm CW is quasi-obsolete, and I
would rarely use it if I were limited to that speed. 5 wpm is an entry
level speed only. Even 20 wpm is slow for contests and serious DXing.
There is nothing obsolete about CW, but it takes some time and effort
to get to the speed where you can use it efficiently.

And the FCC is supposedly getting more stringent about the 13/20 waiver as
well.

Perhaps he meant "obsolete outside ham radio". It's not likely that you
will find a use for Morse code that's (a) not just a licensing requirement,
like the code requirement for some commercial licenses, or (b) incapable
of being replaced by a newer mode which is easier, faster, or both.

> The
> best contesters are not interested in using obsolete modes, so why

Isn't this a circular argument? Couldn't you just as well say that Morse
is obsolete and the best contesters use Morse, and therefore the best
contesters use obsolete modes? And isn't your definition of "best"
presupposing the use of Morse?

Congratulations! You are nicely demonstrating why I so seldom jump into these discussions; the world is so full of extremists who see things in black in white that I forever find myself defending both sides of an issue. So once again, I'm sandwiched between the people who want to abolish code and the "Code Forever" fanatics. I guess I should have seen it coming when I offered the "nearly obsolete" as an olive branch to the "code is holding me back" crowd. Live and learn.

My original and ONLY point was that it has never been easier to get a license, and it seemed odd to me that no matter how easy it gets, more and more people scream that it needs to be easier still. My intention is to encourage people to channel their energy into overcoming obstacles instead of complaining about them, and ultimately allowing themselves to be defeated by them. I won't be dragged into an entirely different subject.

I don't think all clubs are like that.. Ours is pretty good to "young"
hams.. Although I just got my first radio yesterday, and made my first
contact today, so I will see if they start blaming me for things :) ..
There is only one other person (I think) in town here that is a ham and
under the age of 20, and he does't have a radio yet, so hopefully he'll
get one too and get blamed for things also :)... The people in out club
are pretty helpful to new hams.. One in particular helped me out more
than was nessecary, and because of him, I am on the air today.. I think
you should look for a new club to hang out with, the sound like they are
pretty stuck up..

I have a No-code Tech license, and the only bands that techs can
transmit on are above 50MHz.. There are portions of those bands that have
quite a bit of CW on (here anyway), and if I really wanted to make a fool
of myself, and a local ham mad, I could try to communicate.. I don't
think that this should be changed however, because I am planning on
practising with another no-code friend so we can upgrade..

> operating practice and amature service as an alternative method of

I think the basic understanding should be there.. One reason that pops
into my mind instantly, is because of power supplies. I got my first
radio for christmas (yesterday) (a mobile), and a power supply for it.
The radio wasn't already wired up to the power supply, so I had to do it.
I also got a KPC-3 TNC along with it, but no power supply.. So all day
christmas I didn't know if I could wire in the TNC and the radio to the
same power supply (I didn't pay much attention during the classes because
of my cockyness and erogance).. I was going to wire it up after I did
some calculations, but I thought I would hold off untill the day after,
and it was a good thing I did.
The fun part of ham radio is getting to build, or even "fix" (the proper
word is play :)) broken equipment.. If all the person really wanted to
do is talk to other people, there are cheaper ways to do it (CB comes to
mind).. I am not all that great in electronics (YET!), but I still like
knowing whats going on when I push that switch on the mic..
On the other hand, I know what it's like having to take the test three
times in a row before passing, and an easier way to start out would be
great for people that don't know anything at all about electronics.. And
rewarding for service and operating in ham radio is practised right now,
with all the certificates handed out by the ARRL, but I don't really
think that people should be able to upgrade by just winning contests..

Just my opinion.. Have a good day.

When there is a newer, faster, easier mode I expect to use it,
so long as it's a mode that I can use to communicate with the
majority of hams worldwide - I'm not aware of one at the moment.

No, not really. On the contest reflector where those interested in
contests gather, we don't have any of this "CW is good vs obsolete"
discussion. The best contesters win phone or CW contests, whichever
they choose to enter, and usually it's the very same people. Most
contesters would like to see more contests during the year (I realize
that non-contesters disagree...) but I have never heard anyone ask
seriously for an AM contest, or for a DXpedition to go on the air
using AM. Same with spark, I guess - and older hams can get quite
sentimental about that.

I have no problem with someone giving CW a serious try and then
deciding that they don't like it (others do the same with RTTY
or phone), but it annoys me (really, 'saddens' is the word) when
someone who has not given it a fair try says "of course, we know
that morse is obsolete and only used for sentimental reasons".
We don't "know" that at all. I'm not sure what is supposed to
have happened in the last quarter-century that has made CW so
"old-fashioned" in some people's minds - i.e. since SSB took
over from AM. There are some interesting modes and techniques
out there, but for the vast majority of active hams, they are
not yet in common use. I'll give them a fair trial when they
are.

You don't know how true this is. When I was 16, I was in an electronics class at school. The teacher was sick that day, and we had a substitute teacher, and he was a ham. He brought in his HT and I thought it was one of those hand held CBs.. I asked him why he would want to be on CB and he looked at me real strange! He told me all about ham radio and about the HT, and demonstrated it for me, and I was hooked... I passed the test about three months after my 17 birthday, and I finally got on the air today! I think there should be more things out there to try and hook young people into this.. Instead of going out and causing trouble, I just spend money on ham radio! :)

That's not quite true: as someone else has pointed out, three of the five reasons given in the regulations
for the amateur service to exist involve technical expertise. In addition, amateur radio has from time to time advanced the state of the art in communications technology. It is certainly worthwhile to reward technical knowledge, even if the reward is only a few kHz of spectrum. I'll abstain on the question of whether 20wpm code speed is worth any reward, at least until I pass the test :-).

The Advanced and Extra tests do include questions on some modes that aren't covered by the Tech/General tests. Hopefully, this means that Advanced and Extra class amateurs will actually understand the equipment they're using. It also provides more people to help the less technically-inclined amateurs, so they don't all have to rely on Gary :-).

5715. Mobile HF woes.

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-27 01:05:17 UTC
From: Ian.Cassell@launchpad.unc.edu
Message-ID: <2flccd$ap7@samba.oit.unc.edu>
Source record: 272845

I'm trying to get back on HF mobile. Has anyone mounted an HF rig in a Saturn SL-2? I can't find a good passage through the firewall to lead the power cable from my IC735 directly to the battery and I DO NOT WANT to drill new holes. There must be a way ... (also, has anyone figured out how to get the dash cover off? Is there a trick beside taking out the two covered screws?)
. I did come up with a nifty no-drill HF antenna mount if anyone is interested. I just took two pieces of steel angle stock and bolted them to the tow-hole under the rear bumper with a 1/2 inch bolt. Works great!

GROWTH IN HAM RADIO MAY NOT BE AS GREAT AS EXPECTED

Growth in Amateur Radio may not be anywhere near as great as the numbers currently show. This is because there have been few names purged from the FCC's database in over a decade, and there is really no way right now to know the total number of hams who are alive and taking an active part in the hobby.
But come January of 1994 some real idea of just how many hams there are will begin to show up. This, as the first of the ten year ham licenses begin to expire and we see just how many hams renew.

By way of background, all licenses issued or renewed during the period of January 1984 to December 1988 were ten year term tickets. As a result there were relatively few renewals filed from January 1989 to the end of this year. There were also no renewals made to existing five year licenses after 1989. All licenses issued from January 1984 to December of 1988 were simply given a bonus of a five year extension. So, the big question for 1994 is what is the real number of living, licensed and active hams.

Some insight may come from figures compiled by Fred Maia of the W5YI VEC. Fred figures that at least 4,400 renewal applications should arrive at the FCC's Gettysburg, Pennsylvania post box in January. Most trend watchers expect the number to be around half of that and believe that a downward trend will continue as the inactive and deceased hams are weeded out of the FCC database.

The Commission says that it is planning to introduce a new and simple mail-back renewal card. In fact the commission had planned to introduce the card in January, but it now does not look it will be available until later in the year. The theory is that anyone who does not renew using such an easy system is either no longer among the living or has decided to drop out of ham radio, permanently.

Sometime in March the numbers for January and February should be announced. As soon as they are, we will bring them to you so that we can all know whether the trend is up or down.

*****

PIRATE RADIO COURT BATTLE AGAINST FCC

A pair of self proclaimed low-power pirate broadcasters are challenging Federal Communications Commission rules that prevent them from using the airwaves. This, by arguing in court that their rights and those of their audience are being oppressed.

The two would be micro-broadcasters are William Dougan of Phoenix, Arizona and Tom Reveille who is the former operator of "Radio Free Venice" in Los Angeles. Both are challenging the FCC rules that deny licenses to radio stations of less than 100 watts. They argue that the rule is unnecessary, violates freedom of expression, and allows only the wealthy to use the airwaves.

Dougan's attorney is William Piatt. He told the panel of judges in the 9th Circuit Court that there is no evidence his client interfered with anyone by broadcasting over a half-watt transmitter to the 600 residents of his mobile home park.

But David Silberman, a lawyer for the FCC, countered that micro-broadcasters have the potential to interfere with police radio, aviation frequencies and national defense broadcasts. He said that to keep the airwaves orderly, Congress gave the FCC the authority to be a radio traffic cop. That it is the FCC's job to administer the limited number of frequencies available so as to best serve all the public.

Dougan's station transmitted for about a month in early 1992 before the FCC fined him $17,500. Reveille operated for seven months, eventually expanding to 20 watts and reaching about two square miles of Venice and Santa Monica, before federal agents raided his home and seized his equipment in November 1991.
The case is the latest in a running battle between the FCC and small-scale unlicensed broadcasters, many of whom describe themselves as an underground movement challenging media conformity and government authority. Although the commission has won all cases against commercial pirate"stations, these are the first involving non-commercial community broadcasters to reach a federal appellate court.
The panel of Judges heard about an hour of arguments in the two cases. They say that they will issue a ruling at a later date.

*****
VE INVESTIGATION UPDATE

Still with regulatory issues, we have an update on the ongoing government probe of several Volunteer Examiners in the Los Angeles area. Word is that some of the VE's under investigation may still be giving ham radio tests even though they have been suspended by both the ARRL and W5YI VEC's. This is because the FCC apparently never bothered to inform the nations other VEC's of the names and call signs of the suspect examiners. The word on the street is that some of the suspended examiners are simply sliding over into another of their many accreditation and are continuing to administer examinations to prospective newcomers and upgrades.
But this may soon change with word that the Westlink Report ham radio newsletter is calling on the FCC to make public the names of those hams it suspects to be in violation of the Part 97 rules regarding the administration of amateur radio examinations. The newsletter also indicates that if the Commission fails to take such a step voluntarily, that it may find a way to publish the information. This, as it's of letting the ham radio community know who the suspected bad VE's really are. Stay tuned.

*****
EMISSION LEVEL STANDARDS IN PART 15

Manufacturers of digital devices operating below 1000 MHz applying to the FCC for equipment authorization now have two options, They can show compliance with either the current Part 15 emission standards or they can choose to adopt the newer International RF emission standards that have been developed by the International Special Committee on Radio Interference. Since there are no international emission standards yet established for frequencies above 1000 MHz, the current Part 15 rules will

continue to apply.

*****
NATHAN TAYLOR, WZ1W (MISSING CHILD) UPDATE

Even though two federal agencies are now involved in the hunt, there are still no leads to the whereabouts of Nathan Taylor, WZ1W. Nathan is the thirteen year old ham from Gardner Massachusetts who ran away from home last August 27th. According to the Gardner police, Nathan let on his own, but did so apparently under the influence of people that he had met on a computer bulletin board network. His mother says that the person who allegedly fostered her son's disappearance is a convicted felon with a criminal record.
Both the Taylor family and the Gardner police have asked hams from Tennessee to Texas to be on the look-out for Nathan. While he holds an Extra class amateur license, his most recent interest is in computers and computer bulletin boards. If you run into Nathan, you are urged to immediately call City of Gardner Police Detective Bill Grasmuck at area code (508) 632-5600. Even the tiniest thread of information would be welcome by the family, so if you have any information of even a suspicion as to where Nathan Taylor WZ1W might be hiding out, please help to bring him back to his parents this Christmas by calling the Gardner Police at area code (508) 632-5600 and asking for Detective Bill Grasmuck.

*****
FCC COMMISSIONER CHOSEN AS NEW PBS CHIEF

Some names making news this week include outgoing FCC Commissioner Ervin Duggan. The Public Broadcasting Service has chosen Duggan as its new president to succeed Bruce Christensen, who stepped down last summer to become a dean at Brigham Young University.
Although Duggan says he has no specific blueprint for the changes he expected to come at PBS, he said that he is amenable to joint ventures that could include cable television and computer services.
PBS is a private, nonprofit corporation that distributes programming and educational services that it buys from producers. It gets its funds through the Corporation for Public Broadcasting and private grants. Duggan will assume his new duties as PBS chief on February 1, 1994. By federal law his annual salary may not exceed $148,400.

*****
HAM RADIO HORIZONS NAMED AS FINALIST IN VIDEO COMPETITION

Emmy winning TV Producer Rich Moseson, NW2L, may be on his way to another major award. This, with word that his video titled "Ham Radio Horizons" produced for CQ Communications Inc,

has been named as a finalist in the New Fork Festivals International Non Broadcast Media Competition for 1993. Moseson's "Ham Radio Horizons" is designed to bring the world of ham radio to life for hams and non hams alike. It was chosen form a field of almost fourteen hundred entries in the competitions non-broadcast categories. Winners of the festival's Gold, Silver and Bronze medals will be announced in January 1994. If "Ham Radio Horizons" takes the gold, it will be the second time that a video presentation dealing with Amateur Radio will have attained this honor. In 1987 the ARRL produced "The New World of Amateur Radio" received this highly coveted award. The Gold Medal is been on display at ARRL Headquarters in Newington Connecticut. Ironically, Moseson served as one of the Field Producers on "The New World of Amateur Radio."

*****
JOE LYNCH, N6CL NAMED AS QCWA MAGAZINE EDITOR

Joe Lynch, N6CL has been named as the new editor of the Quarter Century Wireless Association's news magazine. Joe's tenure as editor of the QCWA Journal begins in January. He will also be continuing on as CQ Magazine's VHF editor and as the ARRL's Oklahoma Section Manager as well.

*****
TERRY ESTES, WB4ASZ QUITS SOUTHEASTERN REPEATER ASSOCIATION

Terry Estes, WB4ASZ, has tendered his resignation as the Kentucky District Director of the SouthEastern Repeater Association, Inc. Estes assumed the directors seat of the old CVRA, SERA East Kentucky District back in 1985. This, after many months of organizational work on his part to get repeater owners in the area to accept association with the region-wide umbrella coordinating group. WB4ASZ says that a combination of increased family and employment responsibilities is the reason for his decision to step aside. Jeffery Martin, N5KOL, has been named as Estes replacement effective January 1, 1994.

*****
SAREX TO FLY AGAIN IN JANUARY '94

The first SAREX flight of 1994 is currently slated for liftoff on January 27th. Several members of the six man crew are currently studying to take their license examinations. One of those scheduled to fly is Mission Specialist Sergi Kirkalev. Kirkalev is a veteran of the Russian Mir space station who has swapped his U5MIR call sign for a more traditional call of UZ3AK. Four schools in the United States and one in Russia have scheduled contacts with the ham radio crew that will be flying STS-60.

*****
BOSNIA-HERSZEGOVINA ADDED TO THIRD-PARTY TRAFFIC LIST

The FCC has added Bosnia-Herszegovina to its list of counties with which the United States now has a third-party traffic agreement. This means that United States radio amateurs are now free to handle messages to and from that war ravaged nation.

*****
RTTY DXCC HONOR ROLL TO BE CREATED

In DX, word that the ARRL Awards Committee has voted to accept a DX Advisory Committee recommendation aimed at creating an Honor Roll for RTTY DXCC. Qualification for this new Honor Roll is the same as for mixed mode operation. That being the 318 current countries. On January 1, 1994 Eritrea will be added to the DXCC Countries List, and the level will rise to 319. Contacts made using Baudot, ASCII, Amtor, and other non-CW digital protocols all count for this award. Hams that qualify for the new RTTY Honor Roll will be recognized based on their RTTY DXCC records. No other action is required.

*****
NEW YORK CITY MARATHON WRAP-UP

Belated but deserved congratulations to ARRL Hudson Division Director Steve Mendelsohn WA2DHF. Once again, Steve successfully assembled a massive communications network that was the backbone of the recent New York City Marathon. Hams were involved in just about every stage of the race's planning and they provided both logistical and emergency communications during the event. Each year there are several out-of-town hams who come to the Big Apple to be a part of the marathon communications effort and this year was no exception. The ARRL Letter reports that one of the out-of-towners who showed up as a volunteer was none other than FCC Private Radio Bureau Chief Ralph Haller, N4RH.

NOTE: The Effective Sunspot Number for 25 DEC 93 was 46.5.
The Full Kp Indices for 25 DEC 93 are: 1o 3- 1+ 3- 2- 1o 2- 2o

SYNOPSIS OF ACTIVITY

Solar activity was moderate. Region 7640 (N09W08) has
been a most prolific region, producing an M1/1N flare at
26/0412UT and no less than 15 C-class flares ranging from a
C1/SF to a C6/1F flare. A Type II radio burst was detected from
this region at 26/0728UT in association with a C4/1F flare.
Region 7640 continued, but slowed, its growth and remains
magnetically complex. Regions 7641 (N04W08) and 7643 (S18E41)
showed no significant development.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7640 has a fair chance for an
occasional M-class flare and a small chance for an isolated
X-class flare.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the first two days of the
forecast period then active as a coronal hole rotates into a
favorable position. High latitude stations could see minor to
major storming by the end of the forecast period.

Event probabilities 27 dec-29 dec

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 27 dec-29 dec

A. Middle Latitudes
Active 15/20/30
Minor Storm 05/10/25
Major-Severe Storm 01/05/05

B. High Latitudes
Active 15/25/25
Minor Storm 05/15/35
Major-Severe Storm 01/05/10

HF propagation conditions were normal over all regions.
Propagation over the high and polar latitude paths have
returned to normal due to the elevated levels of solar
activity. Near-normal conditions should dominate until about
29 December when signals could again become degraded over the
middle to polar latitude regions due to a recurrent coronal
hole.

------ ---- ---- ---- ---- -- ------ ------ ---
25 Dec: 0657 0716 0720 C5.8 SF 7640 N07E10 III
1521 1524 1530 SF 7640 N07E06 III
2021 2025 2030 C1.0 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

The HAM-server index has undergone some radical changes. I am in process of adding descriptors to most of the files, and have moved some files around.

If you have ordered an index prior to 12/26, I suggest you re-order.

Send your request to:

HAM-server@grafex.sbay.org

In the text place

get \hamradio\index.txt

There is an organisation which puts job ads in Radio Communication magazine
with the following as part of the desired experience:
"We would prefer you to be capable of reading morse at 20wpm...."

And it is a multi-million pound organisation as well. If they don't think
it is obsolete then it isn't!

> sentimental reasons?

CW is still alive among contesters because it's a *separate award category*.
The purpose of contesting is to accumulate as many awards as possible, and
to get the CW Honor Role status, you have to operate CW. That says nothing
about whether CW is obsolete or not. Some people restore antique cars to
win show trophies. Some people collect postal cards for no apparent reason.
They follow whatever rules are in force in order to pursue their mania for
status, regardless of whether the rules make sense to an outside party.
The ARRL has just created a RTTY Honor Role. I'm willing to bet that more
Dxpeditions will now include RTTY operations for that reason. If the ARRL
dropped the CW Honor Role, it's likely that few DXers would continue to
operate CW, just as few operate AM because there's no special status
attached to that mode in the awards process.

According to the Newsline article, RTTY, AMTOR, and *other non-CW
digital protocols* all count toward the award. That opens the possibility
for totally automated stations to achieve DXCC in a short time. No doubt
many of the CW ops will look down on those as "not real hams". But I
also bet they'll be scrambling to setup to win the award too. :-)

>addition, amateur radio has from time to time advanced the state of the
>art in communications technology. It is certainly worthwhile to reward
>technical knowledge, even if the reward is only a few kHz of spectrum.
>I'll abstain on the question of whether 20wpm code speed is worth
>any reward, at least until I pass the test :-).

People who have advanced the art have learned how to do so because
they wanted to advance the art, not because they needed to prove
their status by taking a test, nor because they wanted some scraps
of exclusive spectrum. People who take the time, and spend the energy,
to advance the art do so for their own internal satisfaction. The
work, and sometimes it's publication, are their own reward.

>The Advanced and Extra tests do include questions on some modes that aren't
>covered by the Tech/General tests. Hopefully, this means that Advanced and
>Extra class amateurs will actually understand the equipment they're using.
>It also provides more people to help the less technically-inclined
>amateurs, so they don't all have to rely on Gary :-).

But it would be better if amateurs actually understood their equipment
before operating it. I'm saying that Tech/General should cover the
relevant basics, though they don't now, and thus Advanced and Extra
would be superfluous.

[Article crossposted from rec.radio.swap]
[Author was Craig Ladane Lindsey]
[Posted on 20 Dec 1993 18:59:54 GMT]

I am looking for 4 crystals that make up the 10m portion in this rig. I don't have the freqs with me, but I believe they start at about 43.0 MHz. If you think you have something that would work, email me and I'll get the exact freqs needed. I have priced them from ICM for $11 or so apiece. Any help or pointers to more information will be greatly appreciated.

Thanks and 73s,
Craig

5726. UK scanner listeners arrested; called "hams"

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-27 16:35:37 UTC
From: slm@world.std.com
Message-ID: <CIpCrE.2xr@world.std.com>
Source record: 272852

I read the following "Guardian" report, via Reuters news service, and was rather irked. I would imagine that all the folks involved in this were NOT necessarily ham-radio operators :-(

And I'm no expert on British law, but it seems rather unfortunate to arrest someone because they wanted to drive someplace and see something, if they were looking from a distance and not interfering with police activities.

Sharon KC1YR

POLICE TURN TABLES ON POLICE RADIO EAVESDROPPERS

DONCASTER, England (Reuter) - Police in northern England turned the tables on ham radio operators who eavesdrop on police
^^^^^^^^^^^^^^^^^^^
radio by issuing a spoof broadcast of aliens landing nearby and then arresting those who turned up to see the ``spacemen.'' South Yorkshire Police launched ``Operation Marconi'' when they suspected criminals were cashing in on information gleaned from the airwaves, The Guardian daily newspaper reported Monday.
The eavesdroppers ``could hardly believe their ears -- aliens were invading planet Earth ... Doncaster to be exact,'' the report, citing the latest edition of a local police magazine, said.
It said several people were arrested and charged with acting illegally on information in police broadcasts.
Scanning equipment can be legally purchased for a few dollars and it is not illegal to eavesdrop on police broadcasts. But it is against the law to act on any information overhead when monitoring police frequencies.
Another spoof broadcast, according to The Guardian, said bags of money had been discovered in woods and large sums were blowing around. Within two minutes, a first car of eavesdroppers arrived in the hopes of picking up some of the booty.
``This is a problem throughout the country. We just took the necessary steps to crack down on it,'' one officer in South Yorkshire, a northern English county, was quoted as saying.

ZCZC AP13
QST de W1AW
Propagation Forecast Bulletin 51 ARLP051
From Tad Cook, KT7H
Seattle, WA December 23, 1993
To all radio amateurs

SB PROP @ ARL $ARLP051
ARLP051 Propagation de KT7H

Solar activity was low last week. Solar flux dropped to 83.8 on December 17, the lowest since September 14.

Geomagnetic conditions were mostly stable. The K index did go as high as four, but only on a few occasions on the 16th, and once each day on the 17th, 18th and 22nd.

Flux values should rise to 105 or higher in the first few days of the new year, and then fall back to around 85 after the middle of January. There is a possibility of some disturbed conditions around January 12.

Sunspot Numbers from December 16 through 22 were 29, 47, 51, 25, 53, 45 and 61, with a mean of 44.4. 10.7 cm flux was 84.5, 83.8, 85.1, 87, 91, 92.9 and 100, with a mean of 89.2.

The path projection for this week is for Christmas day, from Omaha, Nebraska to Soviet Georgia.

80 meters looks good from 2000z to 0800z, with a weaker opening from 1130z to 1500z. The best time is from 2330z to 0430z. 40 meters should be open around the clock, with the best time from 2300z to 0500z, and the weakest signals from 1130z to 1200z and 1530z to 1630z. 30 meters should be best from 1330z to 1730z, 0400z to 0530z and again around 0730z. 20 meters should be open around 1430z to 1600z, and there is a small chance of openings from 2130z to 2330z and 0500z to 0730z. The frequencies above 20 meters do not look good over this path at this time of year.

I agree with this!!! As a new advanced (and having worked *real* hard to get my 13wpm code. :-), I did not feel too comfortable operating at high CW speeds, so I spent a lot of time in the novice subbands--particularly on 40m. I still do, even though I now operate on the lower fringes of the advanced sections too. I find that most of the rag chewing happens in the novice bands. Hams there seem to not worry as much about WAS or WAC or other neat awards, and I've had some *long* QSOs at some very reasonable 10-15 wpm around 7.40MHz. Heazen knows they have helped my code speed!

You can't possibly be serious!

CW is still alive among contesters BECAUSE IT'S FUN!

Only a handful of the 2000+ operators who send in entries for the CQ Worldwide DX CW Contest every year get any awards. And that says nothing about the majority who didn't even send in their logs! The same is true for nearly every CW contest you can name. The fact is that most contesters have no hope of accumulating many awards. There are too many of us with too few awards to pursue for that to be our purpose. Clearly, for the overwhelming majority of contesters, the accumulation of awards is NOT the purpose of contesting.

We now return you to your regularly scheduled flamefest. 8-{)

[article deleted]

This one is also doing the rounds on the GB packet network, and everyone is complaining about the lack of distinction between licensed amateurs and scanner-only people. Most amateurs would have more sense than to turn up.

Under English law (and probably Scottish as well - the two are not always the same) the only things you can listen to radio-wise without a licence of some sort are broadcast stuff, amateur radio and transmissions from the standard frequency service.

In practice, you can listen to anything you like so long as you don't admit to doing so. By turning up at the UFO event all these people were implicitly admitting to listening to police frequencies. Serves them right for being stupid really.

Note that I don't agree with the law, but the British Goverment has always been a bit paranoid about what its citizens can listen to!

This is too silly for words! Very few of the 38% of active amateur
radio operators who use CW would drop the mode if the CW Honor Roll
were dropped. That would be a really stupid reason to stop doing
something that you're having so much fun with!

>>
>>>I recognize it as a nearly obsolete mode that is primarily still alive
>>>for sentimental reasons.
>>
>> This is pure baloney. CW has never been obsolete. You may not like
>> contesting, but for every phone contest there is a CW contest. The

This is not completely correct - there are some contests which are
mixed mode (CW and SSB). Some of these have separate entry categories,
and some do not. In Field Day (technically not a contest), anything
goes - FM, Packet, RTTY, VHF, CW, SSB, etc.

>> best contesters are not interested in using obsolete modes, so why
>> do these contests still exist and generate so much activity? You may

There are many reasons that people operate in contests. Sure, there
is the lure of winning an award, but truthfully, there are many of
us who do not win awards very often, so there must be some other
reasons - like just participating and learning and developing our
operating skills, or even making QSOs so that we can collect more
QSLs for DXCC or some other award like WAS.

>> not like DXing, but all major expeditions operate mainly SSB phone and
>> CW. Why would people spend thousands of dollars to activate a rare
>> country, aim to make as many QSOs as possible and then use an obsolete
>> mode to do it? Sure, there are a few phone-only expeditions, but there
>> are also CW-only ones. G3SXW spend 3 weeks on Tristan da Cunha and maded
>> 23,000+ QSOs on CW and about 3 on phone. You think he did this just for
>> sentimental reasons?
>
>CW is still alive among contesters because it's a *separate award category*.
>The purpose of contesting is to accumulate as many awards as possible, and

Not all of us contesters are that interested in awards despite what you
might believe. Some of us are interested in other aspects of operating
our stations (or someone else's for that matter). Some of us who enjoy
CW and enjoy contesting participate for many reasons, not just for the
awards. There are some of us who are very competitive and will use
every skill that we have to win, if not for the award, for the
"bragging rights" (witness Field Day, where there is no awards program
at all). I suspect that if contesting was not as popular as it appears

to be, the various sponsors would have lost interest in running them
many years ago.

>to get the CW Honor Role status, you have to operate CW. That says nothing

I, for one, am not the least bit interested in getting on the CW Honor
Roll (at least the DXCC Honor Roll). If there were a CW contesters
Honor Roll or a "Hall of Fame", I would be interested in that, however.
I have worked and confirmed nearly 300 DXCC countries, but you will
not find my callsign on the DXCC list.

>about whether CW is obsolete or not. Some people restore antique cars to
>win show trophies. Some people collect postal cards for no apparent reason.
>They follow whatever rules are in force in order to pursue their mania for
>status, regardless of whether the rules make sense to an outside party.
>The ARRL has just created a RTTY Honor Role. I'm willing to bet that more
>Dxpeditions will now include RTTY operations for that reason. If the ARRL
>dropped the CW Honor Role, it's likely that few DXers would continue to

There are some people who have the misconception that DXers are
contesters and vice-versa. That is not necessarily so. There are some
DXers who cannot stand contests, and there are some contesters who are
just not interested in DXing (to some extent, I am one of those). How
many times have you heard a DXer who is at the top of the Honor Roll
say, "Well, I have worked them all now. So now what do I do?" There is
no contester, no matter how serious or competitive, who has won every
contest. There are so many variables that even if you win a contest in
one year, you can enter again the following year and not win because of
any number of reasons such as propagation anomalies, new competition -
you get the idea. So for us contesters, there are always new challenges
ahead of us. You could say that, like most of us in real life, we
all have our own priorities and goals. Or, as one person once put it,
"Different strokes for different folks".

>operate CW, just as few operate AM because there's no special status

>But there are a few things I have been disappointed with. First and foremost
>is the cost of the hobby. I've been licensed for four months, and I have
>still not saved up enough money to get even my first radio. I have been
>active only

Cost? Go check out some ham mags from 20 years ago. You spent a kilobuck on equipment that did less that didn't perform as well overall. and you got to spend time "installing" it by making all the patch cords (well, at least running down to radio shack...). you needed a receiver, transmitter, a separate power supply and speaker -- around $1200 or so list from places like Drake. Collins is out of the question. And the TS-520 is an "unproven rice burner" at this time, and is priced around $600. don't forget you need a key, mike, etc.

USE that club station when you have time. But you say you aren't there. Have you investigated clubs in the area where you happen to be? it would be worth checking out. And you don't have to do it ALL right away. you can keep your CW fresh using a computer. (it took me 19 years to finally get the Extra..) and it sounds like you have something to use to keep in touch with the others in the area.

you are just starting out...relax and give it some time. when you get out of school and start working you'll have more time for an avocation and hopefully the funding to afford some nice new stuff.

(price other things to do like Photography, Scuba Diving, heck, even Bowling -- $100 for shoes (1 league's use will be cheaper than renting), $125 for something like a Brunswick Rhino Pro Teal ball (it seems everyone has a "tacky" ball these days...but maybe you want to hold up for the new "steel" RP ball (bowling alley is pushing it but they haven't gotten any in yet), $30 for a single ball bag (if you are serious you need at least a double so you can have your "tacky" and "slick" balls with you when you go to permit you to adapt to that evening's lane condx), and bowling at $3/game (or about $350-$400 per league per "season" in a non-money league [low prize fund contribution]) plus sanction fees and food and drinks and other supplies if desired (wrist braces, tacky ball cleaner, hand towels, rosin, locker rental, etc.) or about $600 to get "started" in bowling (assuming you buy everything new at a pro shop, and don't shop or consider "used" equipment, last year's "technology" (ye olde Used, Plugged, Black Beauty or AMF "3-dot" rubber ball for $20 incl fitting and drilling) or "free house balls", etc.)

(me, i have 1 $50, old Ebonite "red" gyro 1 ball that almost hooks on the new lane surfaces and a $20 bag..i'm killed on shoes with size 14-15 feet..i might consider getting a new ball in another year or two since the old red urethane ball is finally beginning to sustain some damage around the finger holes. and the G1 was a step up from a Custom LTD i had in college i bought with some

christmas gift money i got as a senior in high school - the synthetic alleys did me in on that one.).

FUN!!!! Bite your tongue....God forbid a Radio Amateur have
fun....That Sir isn't advancing the "Art of Radio"......

You must hate CW, and only operate your TCP/IP Pulse Position
Modulated Spread Spectrum signal in the 14.000-14.025Mhz range,
and frown while doing it. FUN.....no way. The Amateur Radio
Service is to make fun of and put down anyone using such
outmoded transmission as CW....rather you should be on some
mountain top using a 10Ghz signal pointed to the Remlaks
on the planet Zotar....no FUN is allowed.

No one in their right mind could have FUN using CW at 20WPM
shooting the breaze with a Extra Class Amateur....FUN is not
defined anywhere in Part 97....

(The above for the Anal Retentive Types is HUMOR 8-) not to be confused
with serious comments)

: in New Jersey 8-)

Agreed about the police methods, but who is going to take
seriously a report about aliens? I remember as a child
police talking about Santa Claus sitings over their
radios but I didn't buy it.

Imagine the double indignity of
1. being arrested
2. for rushing to the scene of a "UFO" siting

Mr. Fingers (and many others no doubt) once said
"Believe one-half of what you see, one-third of what you read,
and one-tenth of what you hear."

Sit tight. You should have your license in a few days. My dad took his test
around the same time (+/- a day or two) and got his ticket today.

Posted-By: auto-faq 3.1.1.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on the 7th of each month. This article is posted on the 14th, 21st, and 28th of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP and from e-mail servers. This article contains instructions for obtaining a copy of the FAQ. It also contains the table of contents from the FAQ so that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good signal-to-noise ratio in the newsgroup. However, they can't do it alone - you, the reader, have to use them. If you are a new user, please print and review the FAQ articles and look at the instructions in the news.newusers newsgroup before posting any articles. If you are an experienced user, please help by refraining from answering frequently-asked questions on the newsgroup if they are already answered by the FAQ articles. Instead, send e-mail to the user who asked the question. (It will be helpful if you include the part of the FAQ that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #1 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The Fullerton Amateur Radio Club is holding a First Night Special Event Station. First Night, as many of you should know, is a non-alcoholic celebration of the beginning of 1994.

The club will operate a special event station on the General Section of the 80, 40, 20 and 15 Meter Band from 3UTC to 8UTC with the club sign of W6ULI. VHF contacts will be made on 147.975, and on the `Big Bear' repeater on 147.330 on the hour. Certificates for contacts will be provided on receipt of QSL cards.

For more information, Contact KD6TAD, Rowland D Hill.

Ciao, 73 de VE6MGS/Mark -sk-

Jeez, Tom, you just don't understand!

If ya really wanna have fun, put a message on your local 2M repeater at
20 w.p.m. CW, and listen to see how many of the olde phartes can copy it
mobile.....

Not to be discriminatory, young phartes are OK too!

Now for *my* question about this information, does *anyone* know what specific
frequencies they might try to be on? As organizer for the radio communications
at First Night here in Edmonton I would like to ensure as `profitable' contact
as possible between the two respective celebrations in each community.

Ciao, 73 de VE6MGS/Mark -sk-
If any Radio Amateur in the Edmonton District is interested in
operating at this event, please contact either me, or Mike Taylor of
the Edmonton First Night Festival organization. If you do not hold
an Amateur Radio Certificate, do NOT let that hold you back from
volunteering in other roles within the festival.

5753. Re: Optimum call sign for CW/contests?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-28 04:06:06 UTC

In the last ARRL June VHF contest, I did a very little CW with our group's callsign, KD6BIS. What a _horrible_ call for CW! The B, D and 6 are just one "dit" different, as well as the I and the S.

My old Novice call (KC6DTM) sounded better on CW than my current call, KM6JE, but at least my new call is shorter to send...

In my humble opinion, the Australian VK prefix is almost musical in CW.

73 from Leigh/KM6JE in Santa Barbara.

All I've gotta say is: Thank god that the FCC is being more stringent with this code waiver thingy. There are very few cases I can think of where someone could not copy 13- or 20-wpm code. I can, and (as noted by my .sig) I am blind. Blindness has, I'm told, been used as an excuse for taking the code waiver. Well, what a cop-out. Anyhow, yeah, if it's needed, fine, but I think that there's a number of people who probably take the waiver when, through a little effort, they could pass the test. No solid proof of course, but it's this feeling I've got. Irrational, perhaps ... but if the FCC is getting more strict with it, then it won't affect people who genuinely need a waiver (the few who do).

NOTE: The Effective Sunspot Number for 26 DEC 93 was 48.6.
The Full Kp Indices for 26 DEC 93 are: 2- 0+ 1o 2- 3- 2+ 2o 3-

SYNOPSIS OF ACTIVITY

Solar activity was moderate. Region 7640 (N09W23)
continued as the flare producer. It was responsible for an
M1/SF flare at 27/1836UT and six small C-class flares through
the period. New Region 7644 (N11W11) was numbered after being
split off the trailer portion of 7640.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7640 has the best chance of producing
additional, occasional M-class activity and an outside chance
of an isolated X-class flare. Region 7644 also has a small
chance of an isolated M-class flare.

STD: The frequency of flaring within Region 7640 decreased today. However, the signatures of those flares which were observed changed from very impulsive bursts to longer decaying events. Also, the background x-ray flux appears to have increased to near C-class levels. There is some question whether the observed 10.7 cm flux of 140.4 was flare-enhanced. A second 10.7 cm flux measurement taken at 22:00 UTC measured 135.4 sfu. This, together with the fact that there apparently were no 10.7 cm emissions from the M1.9/SF flare at 18:53 UTC suggests that the increased emission likely was not directly flare enhanced, but was rather a natural increase in radiation perhaps related to the flare but not directly correlated with it. The region may be gradually stabilizing, or it may have entered a period of dormancy where magnetic energy is being stored instead of released in the form of smaller flares. If the latter is true, larger flares could ensue provided a suitable trigger mechanism appears.

The geomagnetic field has been at mostly quiet levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled for the next 24 hours, then unsettled to minor storm for the remainder of the forecast period as a coronal hole rotates into a favorable position.

Event probabilities 28 dec-30 dec

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 28 dec-30 dec

A. Middle Latitudes
Active 20/30/25
Minor Storm 10/25/25
Major-Severe Storm 05/05/10

B. High Latitudes
Active 25/25/25
Minor Storm 15/35/35
Major-Severe Storm 05/10/15

HF propagation conditions were normal over all regions. Similar conditions will persist until 29 December when the coronal-hole related disturbance noted above should begin degrading high and polar latitude paths. The activity should peak on 30 December where activity could surpass the minor storm threshold. Poor to very poor propagation can be expected over the high and polar latitude paths on 30 December if this disturbance is as geoeffective as expected. Middle latitude paths should see good to fair propagation on these active days.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.
```

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

5757. Need TS 440 and TU 8 information

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-28 07:14:40 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9312272314.aa02265@paris.ics.uci.edu>
Source record: 272784
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Hello All:

I have the Kenwood TS 440 and have picked up the TU 8 tone encoder
(I believe it is the TU 8, it is not marked, but I picked it up from
a former TS 440 owner who said he used it in his radio).

I have no instruction sheet for the TU 8. I need one. Someone kindly
sent me the sheet for the TSU 4, but it is either not the same as the
TU 8, doesn't give me enough info, or my TU 8 does not work. Can't tell.

So....I need the TU 8 instruction sheet. Fax / copy would be just fine.
Actually, info by e-mail would be fine. I need to know:

1. The switch settings to get 107 pl tone.

2. How to activate (where to place the unit). I had heard once (on the
air) that the PL is not activated unless the TS 440 was operating from the
split memories. Is this true?

Thanks for anything at all. I am anxious to use some local 10 meter
repeaters and cannot do it until I figure this all out.

CW is no officially obsolete. Even the marine systems have dropped it. Other digital (yes cw is digital) modes are far better. CW is only kept because of obsolete international rules. It is also fun to do and I do it but that does not make it better.

>

(IMHO) There is a need for waivers for those who 'medically' need it.
And, there is a no-code Amateur ticket for those who want to
go that way also. Many Amateurs who were against both had
valid reasons. They thought that the 'Waivered' ticket would
lead to fraudulent claims (which I have never seen one case
published.) However, nothing against the majority of the no-code
Techs, but they have their foot in the door now and a minority
of them want more now with HF access.

There will always be a group who will want to see the Amateur
Radio Service as we know it today disassembled. They won't
be happy until the Form 610 comes inside of the rig box like
it use to be with CB. Maybe they should just put them on the
backs of cereal boxes or get one with your junk mail. Then
maybe when there is no room left for a QSO on HF they'll be
happy. (They = any amateur who want to do away with all
code requirements for any HF band access.)

The way things are going in the US we are not too far behind. Taking in consideration the Scanner Laws and now the US DOT ban on RADAR detectors for commerical vehicles.

This ploy would sound like something for an agency to do that would provide good arrest stats. Sort of like the old speed trap ploy, a great money maker too.

Actually since W is not needed and it not any kind fo a reliable indicator of technical or operating comptetance I say hurray. CW as a requirement should be eliminated. It is an outmoded method of communication and is wrothwhile only as a

fun test of a particular skill. TI has no relavanve whatsoever to competance in any other phase of the hobby. I say that it is jsut taking up too much of the ham bands. MUCH more space should be allocated to the efficient digital modes such as pactor and more communication could be carried out. Even hf packet would be much better if all were not forced to operate on a very narrow range of frequencies. Come out of the dark ages and into the light.

I am interested in receiving both AM (NOAA 137MHz) and FM (WEFAX) FAX images.
I have a DSP-2232 and it seems to have the modems to decode these modes.

I have tried various software, AEA 900 FAX, AEA WEFAX (that $99 device), and
JVFAX (with all of its modes) to interface with the DSP-2232 with no luck.

Does anyone know of any software (PC or Mac) that works the DSP-2232 to receive
fax images?

Thanks,
Randy Hall

>of a repeater.

Are there no repeaters allowed, or are there just no repeaters? I can
think of a few islands that use VHF marine almost exclusively that
could use the increased coverage that would be made available by a
repeater on one of the duplex channels...

>Also, is the MFJ J Pocket Rollup antenna any good ($15)?

No. It was a pretty cheaply built twin-lead j-pole (a real garage shop operation IMHO) with heat-shrink tubing and such. The VSWR was all over the map when you got your hand near the feedline, so we sent it back.

>how about telescopic antennas for HT (MFJ-1714, $17) ? how does this
>compare to the AEA hot rod ($25) ?

I've been _really_ happy with the Hot Rod.

I'll never buy another piece of MFJ gear, but to their credit they took it back without batting an eye. From what I can gather, you can build all of the MFJ stuff in your basement at least as well as they can build it in thiers, but then that's true of a lot of commercially available ham equipment. Don't get me started, or I'll tell you about my Fun With Wyman... 8*{

The radio licence was abolished quite some time ago. You only need a licence to operate a TV receiver now.

Interestingly enough, this includes a video recorder and, because a video can receive/record colour, you have to pay for a colour licence even if your TV is only a black-and-white. I have even heard a rumour that someone without a TV but with a teletext adapter on his computer had to get a colour licence because he could display the teletext in colour. Still, I suppose it is all worth it to get two channels with no adverts!

Apparently, Englishmen will flock to unusual "sights". Reminds me of an experience told me by a good friend: he was a diplomat in Russia (Air Attache at the US Embassy) and would see people flocking to get at the end of a long line. He went to the end of one line as asked why everyone was lined up? The answer: "This is a long line, there must be something good at the front!" This is a true story.

I would guess that the English who were scanning the police frequencies were very much used to hearing very factual data and did not even think that false information, outlandish as it was, would ever be broadcast over an official police band by the official police. This might be a good test here in the US to see who might be attracted by such an announcement <HI>

5781. Paul Harvey corrects his story about HAMS.

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-28 22:32:02 UTC
From: tweek@netcom.com
Message-ID: <tweekCIrnxK.4wx@netcom.com>
Source record: 272814
Cross-posted to: alt.folklore.urban,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

Yesterday I wrote about Paul Harvey using the word "Hams" to refer to a group of people in England who responded to a police radio transmission of martians landing.

Today Paul Harvey did mention his little goof yesterday, and did correct his story. He metioned that the word "Hams" when used in reference to amateur radio is commonly believed to mean Licensed Shortwave Radio Operators (close) and that a license is NOT needed to listen to shortwave.

He mentioned the work Amateurs have done in the wake of floods, earthquakes and fires.

Oh, and he mentioned that the source for his story was Reuters (as on email respondent to me suggested.) Now the question... why did reuters just NOW pick up on this story... I read about it last month in Monitoring Times... and they have a three month lead time.

Thank you Paul Harvey, for correcting your story.

I'm somewhat unhappy with my MFJ 2m telescoping halfwave. While it works and is definitely an improvement over the radio's rubber duck, a friend's AEA hotrod looks better made. The SWR on the MFJ is 3:1 and worse, so I'm not too happy with that, either. I haven't had a chance to test the AEA's SWR.

> Clark
> .....

I just happen to have the basic TS-440 manual here at my desk. Had
borrowed it from the club ham shack. It doen't have the TU-8 settings but
does answer one question:

"An optional subaudible tone unit TU-8 is available for installation in the
TS-440S for accessing 10 meter FM repeaters. This tone is activated
whenever the TS-440S is in the SPLIT mode"

"SPLIT switch:
Allows the use of one VFO for transmit, and the other for receive (Split
Frequency operation). For example: VFO A is the active VFO, and VFO B is
the inactive VFO. Depressing the SPLIT switch will cause the TS-440S to
receive on VFO A and transmit on VFO B. The mode of reception and
transmission will follow the mode contained in the appropriate VFO memory.
It is possible to work cross band, cross mode if desired."

The NRDB is a service for frequency coordinators use, only. It is
designed to facillitate communication between coordination groups, and for
providing data for publication in the ARRL Repeater Directory.

Perhaps in the future there will be a national database made available in
non-printed form, but that will require formal agreement among the
coordination councils which provide the data.

Publication of repeater data is a sensitive issue for many repeater
trustees. Many wish their repeaters to be "secret" -- non-published.
Others feel it's OK to be listed in the ARRL Repeater Directory, but not
elsewhere.

I can't speak for other councils, but for TSARC there will have to be a
formal policy adopted -- perhaps even a constitutional amendment (I have
to double check).

Anyone in the TSARC region interested in this issue, either way, please!
Get involved!

73, Andy

Well, I guess the questions here are: would the appropriate regulatory authority issue a station licence for a marine repeater, and, who would want to install such a thing - where would funding come from, etc??? I expect that the Coast Guard and Telco would not be interested - perhaps a large yacht club might be interested.

Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 93/06/28 19 06$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1bq through wa0zvi
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kc4zwi
Part 4 contains kj5aa through kd6zwi
Part 5 contains aa7a through wa9zxm
Part 6 contains oa4hv through zs6tw

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.

email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
a `lookup string ...'. email response limited to 10K. if you want to specify
a return address, add `return user@host.domain'. For example:
Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update December 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 93/06/28 19 06$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update December 28 1993
```

```
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

5790. Radio Amateurs on USENET List Dec 1993 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 02:06:52 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Dec28.3@ve6mgs.ampr.org>
Source record: 272822
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 93/06/28 19 06$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update December 28 1993
```

#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).

5791. Radio Amateurs on USENET List Dec 1993 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 02:06:56 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Dec28.4@ve6mgs.ampr.org>
Source record: 272823
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 93/06/28 19 06$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update December 28 1993
```

#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

5792. Radio Amateurs on USENET List Dec 1993 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 02:06:59 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Dec28.5@ve6mgs.ampr.org>
Source record: 272824
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 93/06/28 19 06$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update December 28 1993
```

```
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GEnie Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list. For addresses like
# #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-MM[-DD] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987 or 1992 US). ? after means recheck may be
# required (eg. Call does not match name).
#

5793. Radio Amateurs on USENET List Dec 1993 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 02:07:02 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1993Dec28.6@ve6mgs.ampr.org>
Source record: 272825
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 93/07/28 19 07$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# After August 1993, unless pressured otherwise, I have decided to only
# post entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list
# will still be accessible at the ftp sites and via the email server. If
# you have any feelings about this policy (either way), I would be
# pleased to listen since at the moment it is a unilateral decision by
# me due to the continuing growth of the data base. I do hope this move
# does not devalue the resource this list presents to the users of the
# rec.radio.amateur.* hierarchy!
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC bowen@cs.buffalo.edu
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update December 28 1993
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. Some GEnie Hams are included
(Generated by Brian Murrey/KB9BVN) in this list. For addresses like
#:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org.
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-MM[-DD] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987 or 1992 US). ? after means recheck may be
required (eg. Call does not match name).
#

5794. ARRL Mailinf list

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 02:25:02 UTC
From: pineapp@netcom.com
Message-ID: <pineappCIrypu.8KK@netcom.com>
Source record: 272819

Did you know that if you don't notified ARRL , if you are a member, that
you want to be removed from thier mailing list. They will sell your name
to all the vendors?
I discovered this from a phone called to ARRL. I was presented a gift
from my in-laws that they had sent for a membership to ARRL , QST magazine.
But had forgotten to give ARRL my call letter. As I was speaking to the
membership person, I had requested that I NOT receive any mail from
vendors. On the phone I was able to hear the clerk typing in the computer
a long sentence. I have no idea on what he was typing, but it sure sounds
like he was typing something about that I be removed from the mass mailing list
. Why does ARRL even have this? If you look at the subscription form to join
ARRL there is no where to mark that one can be removed from selling your
name to other vendors.

This is only my phone opbersation to ARRL headquarters.

>gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>>According to the Newsline article, RTTY, AMTOR, and *other non-CW
>>digital protocols* all count toward the award. That opens the possibility
>>for totally automated stations to achieve DXCC in a short time.
>
>Oh boy. I've always looked forward to the day when machines could enjoy my
>hobbies for me, thus freeing me to ... uh ...

That's the sad thing isn't it? If competing for score by hand is superceded, you can't think of anything interesting to do with amateur radio, like maybe actually exchanging ideas with another person over the air, or playing with a new technology.

But rejoice Type A, they aren't abolishing the CW Honor Roll, just adding a new category. Unless you can't stand not having *every* award, you can ignore the machine scores and be content competing in your sub-category. Like an antique car racer, you can't compete with the real race cars, but you can still show off to your sub-culture.

Gary

5796. RFI into telephones

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 05:01:29 UTC
From: david@stat.com
Message-ID: <7sZaFc3w165w@stat.com>
Source record: 272630

I have a G5RV type antenna in my attic which is only a few feet in places from my telephone wiring. This causes RFI into my telephone system.

Any suggestions on minimizing this?

David wb7tpy

Editor, HICNet Medical Newsletter

5797. Re: Anyone here familiar with extended-play recorders?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 05:12:17 UTC
From: ARMOND@delphi.com
Message-ID: <931229.00737.ARMOND@delphi.com>
Source record: 272743

I saw an ad for Viking International, 150 Executive Park Blvd #4600,
SF CA 94134, PH 415-468-2066, FX 415 468 2067, they say, 10 Hr recorder $159.
Now, note that I know nothing more than what the ad sez, have not usedone
nor contacted them yet, so am not suitability for your exact purpose, but
thought I would be remiss by not mentioning it.

>The North Shore Radio Club needs YOU! How about moving to Chicago?

Sorry, Greg...I'm pretty much planted in georgia....

Luckily, there's a club 30 minutes south in Gwinnet Co...I don't know what their ideas are on "youngins"....acutally, there's a club about 30 minutes each way from me...but the one to the east, Sawnee CLub...has the same old farts as the Lanierland club...the club to the north is the same, as well as the cleveland, GA club... the only real reason I stay with the local club is so I can have a local autopatch...I hardly ever qso on the machine anymore.

John

NOTE: The Effective Sunspot Number for 27 DEC 93 was 55.0.
The Full Kp Indices for 27 DEC 93 are: 1o 1+ 2- 1+ 2- 2+ 1o 1-

SYNOPSIS OF ACTIVITY

Solar activity was moderate by virtue of a single
M1/1N flare in Region 7640 (N09W39) at 28/1659UT. This region
produced only three C-class flares and is beginning to decay.
Region 7644 (N12W26) produced a single small C-class flare and
is decaying as well.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7640 has a good chance of an occasional
M-class flare and an outside chance of an isolated X-class

flare.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next 12 to 18 hours
then unsettled to minor storm for the remainder of the forecast
period as a large coronal hole rotates into favorable position.
High latitude stations could see major to severe storm levels.

Event probabilities 29 dec-31 dec

Class M 50/50/50
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 29 dec-31 dec

A. Middle Latitudes
Active 30/30/30
Minor Storm 25/25/25
Major-Severe Storm 05/10/05

B. High Latitudes
Active 30/30/30
Minor Storm 30/30/30
Major-Severe Storm 10/15/10

HF propagation conditions were normal over all regions.
Conditions are expected to become degraded over the next 24 to
48 hours as a well placed coronal hole elevates levels of
geophysical activity. High and polar latitude paths should see
the heaviest degradation, although middle latitude paths will
also notice the effects of this activity on night-sector paths.
Conditions are expected to be the poorest on 30 December.
Recovery to near-normal is not expected until early January.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
27 Dec: 0313 0318 0322 C1.6 SF 7640 N04W18 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>--

The problem, Larry, is that you won't really attract a club unless you have
a local 2 meter repeater...that's the way the mentality is in this area. I
don't have the funds to start a new repeater, nor do I have the site for one.
If I could put one up locally, ie on the square, it'd be nice...but I don't
know anyone....furthermore, when LARC (lanierland, not the gay club) found
about it...they'd probably be calling my house...

Oh well...

John

5801. Ham Radio FTP area on World

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 07:39:08 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCIsD99.EEn@netcom.com>
Source record: 272644
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info,rec.radio.scanner

This is a period reminder that the Boston Amateur Radio Club maintains an FTP area on world.std.com in pub/hamradio.

This area is accessible via: anonymous ftp, gopher, and World Wide Web (and possibly other methods I'm not yet aware of). World is not *fsp*-able yet (I asked them).

Via Gopher, the easiest path to the area is by selecting the following from World's main menu:

18. Membership and Professional Associations

3. Boston Amateur Radio Club

And go from there...

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail me.

Also, an up-to-date copy of the files available on the ARRL's information server (info@arrl.org) is available in the directory pub/hamradio/ARRL/Server-files.

All text files are uncompressed, so they are both retrievable and viewable via Gopher and World Wide Web. (If you have any troubles with any text file, please e-mail me).

Source code for programs is always welcome. It can permit people to use those programs on other computers with other operating systems.

Scott

5803. Balloon with amateur radio to launch

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 10:31:24 UTC
From: 71234.557@CompuServe.COM
Message-ID: <931229103124_71234.557_DHQ23-1@CompuServe.COM>
Source record: 272645
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Superpressure Balloon Launch

A cooperative group from Utah State University, Logan, Utah, members of the amateur radio community, and Winzen International plan on launching SuperBall 1-94 at approximately 10:00 A.M. MST (17:00 UTC) on January 5, 1994 from the Logan Municipal Airport. The nylon superpressure balloon for this flight is 76 feet in diameter. It was manufactured and donated by Winzen International of San Antonio, Texas. The expected daytime float altitude of this helium filled balloon will be 120,000 ft (36,660 meters), some loss of altitude is expected at night. Theoretically the technology is capable of maintaining a payload at altitude for long periods of time, potentially years.

The initial track of SuperBall will depend on upper air conditions at the time of launch, but is expected to be in the semicircle east from Utah. Possible scenarios might then take it over the Atlantic Ocean or into the polar regions within a few days.

The payload will be limited to a gross weight of 4 kilograms, or 8.8 pounds. It will consist of the following subsystems:

1. An instrument package containing a five channel Magellan GPS receiver, an external air temperature sensor, an internal payload temperature sensor, a battery voltage sensor, and a differential pressure gauge.

2. A 1/2-watt VHF MCW beacon operating on 145.871 MHz with the callsign N7YTK. Every minute it will transmit data from instruments listed above. (This transmitter will also operate through the Russian RS-10 amateur satellite, which has a downlink frequency 29.371 MHz, plus or minus Doppler.)

3. A one-watt CW 15-meter beacon operating on 21.229 MHz with a call sign of WB8ELK. Every five minutes it will transmit data identical to that sent on the 145.871 MHz beacon. (This signal will also be relayed through the Russian RS-12 amateur satellite, which has a downlink frequency of 29.429 MHz, plus or minus Doppler.)

4. An ATV system consisting of a black-and-white CCD camera and associated one-watt transmitter operating on 434.00 MHz in continuous bursts on command.

5. A cutdown package containing a VHF command receiver, DTMF decoder and barometric switch, and

6. Several Lithium battery packs.

Depending on weight availability, two additional beacons are possible:

7. A one-watt VHF AFSK beacon transmitting ASCII data at 1200 baud on 145.968 MHz every two minutes in alteration with the beacon in (2) above, with the call sign of WB8ELK (also operating through the Japanese FO-20 satellite, which has a downlink frequency of 435.832 MHz), and

8. A 60-milliwatt 10-meter CW beacon operating on 28.322 MHz every minute, with a call sign of WB8ELK, transmitting pressure altitude, internal temperature, external temperature and battery voltage. Item (8) will contain either a 9-volt lithium pack that should last a month, or a 9-volt, 150 ma solar panel, lasting indefinitely.

The purpose of the SuperBall 1-94 mission is to certify this superpressure balloon technology for long-duration flight and to test our ability to control and receive data from a high-altitude research balloon for an extended period of time.

Our first plateau of success will be achieved if we operate through a complete sunset/sunrise cycle at a constant pressure altitude. Our second plateau will be a flight lasting a week. Our third plateau will be a complete circumnavigation of the globe. Anything after that is gravy.

The float path of the balloon is very difficult to predict since the polar breakout usually occurs is this time of year frequently resulting in strong north-south currents.

Observers from the Jet Propulsion Laboratory, Martin Marietta and Utah State University's Space Dynamics Laboratory will be present at the launch. These people are potential users of the superpressure balloon for a Martian mission.

An HF net will be conducted by John Luker, WB7QBC, (Internet WB7QBC@uugate.aim.utah.edu) on the day of the launch and subsequent days on 7230 KHz +-QRM. This net will alert interested hams downrange of the balloon's path, and coordinate the collection of telemetry. The Utah Balloon Team would appreciate the forwarding of any telemetry copied to John's address along with pertinent information, including the receiving station's location, UTC date and time, signal report, and receiving equipment. Video tapes of any received ATV transmissions from the balloon would also be appreciated. At this point we only anticipate turning the camera on during the first two days.

Questions can be directed to Bruce Bergen, KI7OM, through Internet at KI7OM@uugate.aim.utah.edu

5804. Help with Scanner

Hello, world!

I have this NETSET PRO-2029 scanner that I got for Xmas... And was wondering
if I could hack into it...

I opened the box and found the main chip to be labeled: GRE-0811, followed by:
342 2947XX. No manufacturer, nothing more.

Does anyone know who makes this chip? Where I could get some info on it?

This scaner is manufactured by InterTAN (Texas?). Anyone know their phone
number?

Thanks for any help!

Gilles.

>to double check).

I'd be real interested in how you guys handle this issue. The Texas VHF-FM Society has debated it in several meetings lately. Their main objection to releasing the data is that it might be used to create a publication which would be sold. This not so much the problem as the source of the data wouldn't get anything for it, even the credit for the data. I'm not sure I agree with this policy, but that seems to be thier position at present.

Hi. This is HS1ZEB from Bangkok Thailand.

I'd like to ask some question on connecting PK-232MBX to a YAESU FT-767GX since I had been trying to wire the connector according to the manuals of both device for many times. But what I got is the overload of the, I don't know how to call this, speaker to burn out.

Anyone using the above equipment please post your informations on how to wire these thing together as well.

Also, I've seen some files name WNOS or something, but I can't find a copy of KA9Q programs, so, I'd like to ask which one do you guys prefer? And if possible, brief explanation of both too.

5808. Re: RFI into telephones

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 14:11:44 UTC
From: julian@bongo.tele.com
Message-ID: <1993Dec29.141144.4358@bongo.tele.com>
Source record: 272653

In article <7sZaFc3w165w@stat.com> david@stat.com (David Dodell) writes:
>I have a G5RV type antenna in my attic which is only a few feet in
>places from my telephone wiring. This causes RFI into my telephone
>system.
>
>Any suggestions on minimizing this?

There are many ways to handle this problem. Not all will work.
It depends on several factors. You say "Telephone System". Do you mean
you have a large PBX that is getting rfi? Or do you have a couple of
cheap phones sent to you for renewing your subscription to Time
magazine?

Often the RFI can be whipped by treating the phone sets. The
standard Bell type 500 (rotary) and 2500 (touchtone) phones are
relatively immune to RFI. Should they be picking up RFI, they can
often be cured by placing 250 Volt 100nF or 10nF capacitors between
Tip and Ring. Tip and Ring is the name for the two wires that carry
the phone signal.

In most residential installations, the wire carrying the
signal around the house is prone to interference if it is not twisted.
If the wire is Red & Green with Black & Yellow, it is not twisted.
This wire is called "quad". It should be replaced with "twisted pair".
Twisted pair is more immune to QRM.

There are special filters sold for telephones. The guy that
makes them advertises in QST. But most WRM problems can be fixed with.
1. decent phones - throw out the nasty junk. 2. decent wire - put
twisted pair in everywhere.

There are some documents that may help in fixing telephone
RFI. They are Bulletin FO-10 from the FCC and Bell System Practice
(BSP) Section 500-150-100 (JAn 1974). There may be later documents,
but this si what I have. I have ascii copies of these docs and will
mail them to anyone who wants them, along with a dreary artice I wrote
for Popular Communications magazine on the subject.

Now, if you do have problems with a large PBX, it may require
more work, but can usually be beaten.

There seems to be a lot of resistance to having a US repeater database, and I'm having trouble understanding why. The two arguments seem to be that the information should only be made available to the "right" people, and that people shouldn't be allowed to make money from the data.

Anybody with $7 can buy a copy of the ARRL repeater directory. Presumably groups that don't want their repeater publically known don't list it in the directory. ARRL makes a couple of bucks on each sale (okay, they aren't an individual, so lets say the money goes back to the good of hamdom).

Suppose I write a geographical database with a really whizzy graphical front end, searching and planning capabilities, made to run on a laptop or PDA. It includes the ARRL repeater directory database. Just what I want while travelling, and maybe others as well... For every copy of this program I sell, I license one copy of the repeater database by sending ARRL four bucks or whatever they think is fair. I could sell yearly updates in sync with the ARRL directory (always licensing each copy with the ARRL).

Of course, someone could pirate a copy of the program, or steal the database for their own program without licensing it from the ARRL. But those would be criminal acts. Maybe my program could encrypt the data to prevent casual lifting of the database.

The only money I'd be making would be from the program itself - the ARRL would make the same amount as if it had sold a paper copy of the directory.

Would any groups object to this? Would it require constitutional amendments and not happen in my lifetime? It sounds good to me, but I don't understand the arguments in the first place.

Feedback is appreciated, before I waste too much time...

Lead time for checking out sources, taking risk one cell ordered no good and having to reorder, not particularly great prices through sources like digi-key. I have heard by e-mail that ww assoc. will sell battery inserts for a modest sum. Now, if you have a good source for batteries with solder tags available in small quantities, please post.

Ferrite...where you put depends on if the guts are in the handset or a base unit. Generally, wrap the cord going into the unit around a type 43 core. Also you can get info from ARRL via info@arrl.org, with the one line message info.

Oh, I'll concede that some people have outre senses of whats fun. Why there are people who consider it fun to lie on a bed of nails, or flagellate themselves with birch wands, or stick hot needles in their flesh, or operate manual Morse. I don't fall into that group of masochists who find Chinese water torture a pleasant passtime.

Someone using manual Morse is like someone who prefers 300 baud modems when 9600 baud units are cheap and available. I frankly don't understand the affinity for slow torture. Why not use drums and smoke signals if you're trying to recreate the past?

5814. Re: Where are all the young enthusiasts?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 17:16:13 UTC
From: dreeves@ese.ogi.edu
Message-ID: <63482@ogicse.ogi.edu>
Source record: 272640

Recentally, John Reed <N4TII@kd4nc.uucp> spoke about being a young
ham in a club of mostly older hams...

>>The problem I am having with my club is my age... I am the first young ham
>>they've had in a while that is highly active....always on the radio...operating
>>at field day, raising hell at club meetings, etc....

[Deleted]

>>MMy club as yet to give me the respect that I deserve as a member and as a
>>person..everytime I open my mouth at a meeting, I'm met with a "That's nice
>>son" attitude and a motion to shut up... I'm cut off in mid sentence, etc...

This is almost universally the experience I've had in California.
I got my ticket there while a student, so the culture clash could
have been a bit much, but I was a fairly conservative (meaning tame)
SoCal student then. Still, only a few of the people in the club
would even touch me with a 40m dipole. The attutude was something
like "You don't look familiar, you don't dress like I do, you don't
act like I do; Therefore, you can not be a good ham".

So what did I do? I joined a club which was serious about radio!
Being part-time at Caltech, I could join W6UE, the Caltech ARC
(I strongly recommend this for any students in the Pasadena/
San Gabriel Valley). There I met UHF ers and learned about the
world above 440, got into HF contesting and ATV. We even set
up an internet-packet gateway (which isn't working right now...).
Alas, but graduation moved me away from W6UE and to Portland,
OR, where the scene almost repeated itself, but since the
folks are a bit younger (and more open minded, IMHO) here,
I feel more accepted.

>>I don't if other clubs are like that with their new young hams, but mine is
>>bad...

THE SOLUTION (IMHO):
Older hams need to be more open minded and "eared" to the younger
crowd. No new hams = death of ham radio. Simple. Don't dismiss
someone because they are (1) younger or (2) less experienced than
you.

Young hams need to be aware that they are going to meet resistance
and be prepared and patient. Let your skill and competence speak
for you. You *will* be recognized!

I do not think there is a really big problem with repeater frequency data
being given out by most of the coordination councils. Repeater frequencies

are pretty easy to come by. My biggest concern is the other frequencies which are coordinated, including links, packet backbones, and so forth. It is not necessarily desirable to give all of these out.

The repeater directory does NOT list evrey frequency in use. Many frequencies are used for other purposes than repeaters, yet are sensitive to interference. When you pick a simplex frequency, please keep this in mind!

The ARRL doesn't own the database, you can't copyright tabular data,
only it's presentation format. That was settled years ago in a case
regarding phone books. If anyone owns the data, it's the coordinating
bodies, and they protect it by keeping it confidential. Most release
parts of their database to the ARRL, though there have been recent
fights about that.

>The only money I'd be making would be from the program itself - the
>ARRL would make the same amount as if it had sold a paper copy of the
>directory.
>
>Would any groups object to this? Would it require constitutional
>amendments and not happen in my lifetime? It sounds good to me, but I
>don't understand the arguments in the first place.

The problem is with the coordinating bodies. Their database is their
bread and butter. It's what allows them to do their jobs. They don't
want to see others profit from their work. Secondarily, the database
contains more than frequency pair assignments. It also contains link
and control frequencies and codes. Many repeater owners want to keep
that information confidential to help prevent their machines being
hacked. Others want to keep the exact geographic location of their

machines confidential in order to reduce vandalism of the site.

Me, I'll tell you exactly where my machine is, and wish you luck
at getting to it. I'll tell you it's input and output frequencies,
it's CTCSS access tone, it's HAAT, and it's ERP, but I won't release
the control codes, or the control link frequency voluntarily. I expect
the coordinating body to keep that information confidential.

From: PEITZER@delphi.com
Message-ID: <931229.46210.PEITZER@delphi.com>
Source record: 272742

Harry, welcome to "the gentlemen's part of 2 meters"! No repeaters to time out or clubs to join. "Just you, me, and the FCC".

Back to the yaesu...the price seems about right. The construction seemed solid one one that I helped a friend work on. Typically, that vintage was fine for stand alone, but weak with regard to special FM type scannine and PL features. I know that for the price difference, I can live without them.

For practical means, the receivers are quite usable. Today's rigs have higher dynamic range, and a lower noise figure, but a good GaAs FET preamp will give you a sensitive reciever, and unless you are near a big gun, then dynamic range might be acceptable.

Bottom line.....I think it would be good for starters. I personally use an HF rig with transverters, but I started with an Icom IC-260A in the same vintage and it had it's shortcomings too.

Best 73, and will look for you "on the bottom of the band"...Woody AK2F

5819. Alarm System RFI

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 17:52:46 UTC
From: mike@garfield.csuohio.edu
Message-ID: <1993Dec29.175246.23710@news.csuohio.edu>
Source record: 272642

I have found that our house burglar/fire alarm system to be a real
annoying source of RFI when listening to SW usually between 2 and
10 Mhz. To cure it, I went to the system box in our basement and
found the digital signal lines that go to the first floor and
master bedroom keypads (where you activate/deactivate your system).
I found two lines (for me it was yellow and green) that seemed to
be the offending radiators. I could have done the ferrite core trick
to trap the RFI, but since all wiring was fastened in place, I simply
used a DPST switch fastened to the control cabinet. When switched OFF,
the two conductors running to the keypads are electically disconnected from the
terminal block inside the control box. Now, I get nice quiet
listening instead of a noise level that sounds like a distorted
electric guitar. Hope this info helps other hams/SWL'rs.

Mike

The University of Central Florida will hold a free Tailgate Party
at the main campus of UCF near Orlando, FL on January 8, 1994 from
7:00 AM until NOON. This event is sponsored by the UCF-ARC and has free
admission as well as free tailgating. There will be no food or drinks
available so you will have to bring your own.
We usually have about 70 - 100 tailgaters and several hundred hams
show up for this event, so it is a good palce to get together and swap
ham stories and ham gear. Everyone is welcome.

I hope to see many hams there.

Sincerely,
John - kr4ah.

5823. Re: who sells good HT battery replacements?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-29 18:40:24 UTC
From: brian@nothing.ucsd.edu
Message-ID: <2fsiuoINNbff@network.ucsd.edu>
Source record: 272643

I have found that my local Panasonic NiCd distributor (Tauber Electronics in San Diego) will take small cash orders at their will-call window. In the past I have wandered in with a dead Motorola HT battery that I'd already cracked open, and they've made up a replacement insert on the spot from fresh cells in stock, including welding the connecting tabs and all that, at no extra charge. It seems to me that contacting the local battery distributors might well find one that is similarly obliging!

However, if you're located in a part of the world where there aren't such local distributors, there are several people who advertise re-celled and third-party batteries in the various ham magazines. I've bought from their booths at the ham conventions, and been pleased with the product.
- Brian

I have a question concerning the newest type of license "scam." Our VE group just had a guy come through with a disability waiver which was signed by his doctor indicating that his blindness prevented him from copying CW.

After reviewing the VE rules concerning this, I had to accept the waiver and pass it along to the National VEC and the FCC. I trust they review these carefully.

What makes this incident so interesting is the fact that at the same VE session, another blind man came in without a waiver and passed a 13 WPM code test with flying colors.

The question to the net is how can blindness prevent a person from copying CW? Is blindness a handicap which should be on the list of acceptable disabilities for a CW waiver? Currently, the acceptable list is those severe handicaps defined by congress (I don't recall the detailed reference, but remember reading it in my VE rules manual).

Are we as amateurs leaving ourselves open for scams where anyone with a doctors signature can weasel out of a code test? Let's re-think this!

I've heard several stories about younger hams not being recognized as piers by older hams. I must say that my experience was quite different. As a young ham (13 yrs old) back in '73 in Pittsburgh, I was quite readily accepted into the two clubs that I joined in the Pittsburgh area, the Pittsburgh ATA - amateur transmitter association, and the South Hills Brass Pounders and Modulators. Not once did someone brush me aside because of my age.

The ATA wasn't a very active club but we had some interesting speakers at the monthly meeting at the Buhl Planetarium. I was active enough in this club that at the age of 14 I became one of the club directors! The SHBP&M was a great club to work field day with at South Park (I'll never forget my experiences there), something that no young ham should be without!

Bcc:

The answer to both questions is a very loud and emphatic NO!!!!

I am a blind ham and have been for the past 6 (count 'em) years. I've enjoyed cw the whole time, and can copy it in my head at upwards of 25 wpm (30-35 on a really good day). I passed my 20 wpm when I was 14, 3 months after I passed my novice class license. If you ever run into this loser again, tell him he is full of shit for me, will ya? I just absolutely cannot _stand_ people who will do anything for a free ride--including selling themselves short. He needs a clue. If he gets the waiver, I will be mightily displeased (like that has anything to do with it). At any rate, blindness has absolutely *no* bearing on one's cw copying ability. If he's not skilled enough to either copy cw on a laptop computer, typewriter, braille writer, slate and stylus, or, for that matter, orally, sham on him--but it's his blindness skills, and likely his attitude about blindness, that's keeping him from that 13- or 20 wpm test, *not* his blindness.

Nor do I. Nor anyone else I know who operates CW.

I fail to understand how anybody could equate operating CW with lying in a bed of nails. Unless they've been smoking the Christmas wreath. Some day you must explain this to me, Gary. Do you really think that people torture themselves just to get awards?

Incredible.

Wise up, Gary. Hundreds of thousands of amateurs throughout the world think CW is fun. They are not being tortured.

Sheesh.

Gary, we all really appreciate you sharing your technical expertise with us. However, you really do need to understand that, when it comes to operational matters, your perceptions are way out there.

Oh yes, you do understand that DXing and contesting are two very different things, right? Your original post seemed somewhat confused about that.

>while I was asleep?

Yes! See, Newton says that everything continues in a straight
line unless acted on by a force. This explains why radio waves
travel in a straight line, see? - it's only when you apply a
force to them with the transmitter that they change direction and
curve around the earth's surface. This curving motion is called
the "curl" in Maxwell's equations.

And if you hear a slight "thump" whenever you key your transmitter,
that's Newton's Third Law - action and reaction. When you push the
radio waves out of the transmitter, the transmitter actually gets
pushed back a little bit. This is why the most powerful transmitters
are actually bolted to the floor, to prevent their migrating across
the room after repeated transmissions.

I'm surprised you didn't know all this, what with your being an

It does seem a bit silly, in 1993, to give a CW test the same level of
importance as the written test, doesn't it? I wonder if we couldn't
include CW questions on an overall test for a given license class,
instead of making it a separate test element. Or wouldn't that be in
conformance with international treaty?

[explaination of curl, that is divergent from norm, omitted ...]

Actually, Sir Isaac omitted to take into account jerks (third derivative of position w.r.t. time), which results in the emissions you hear on 14.313.

> And if you hear a slight "thump" whenever you key your transmitter,
> that's Newton's Third Law - action and reaction.

The "thump" I usually hear is from my downstairs neighbour complaining of TVI each time I key down. Wait, I guess that *is* Newton's third law :-).

Errr, Derek, what is a key? :-) It is only half a word. The other half, obviously, is "board."

> I'm surprised you didn't know all this, what with your being an
> Extra class ham and all that,

Mea culpa, I will return my license to the FCC pronto.

I gauss I did poorly with my Maxwell studies because they hertz my brain, faraday and everynight. Even thinking about it gives me a headache, I need to walk all the away around the pillbox to get an aspirin. The reason I really don't believe Maxwell is because he claims that Adm. Perry never visited the magnetic monopole.

>Derek "Isaac" Wills (AA5BT, G3NMX)

Shucks, I was expecting you to sign Isaac Wills, F.R.S., K.B.E. :-)

That is because you did not Huffman encode your drum beats, like
them Pactor boys. In fact, if you use spread spectrum drums, you
won't even have to worry about the artillery shells.

Beware the tone deaf! You will never pass the 20 wpm drum test
that is designed to keep off the riff-raff.

Sure, Type As will go to extreme lengths to be competitive. They'll
go for 48 hours without sleep with an infernal beeping device clamped
to their heads. They'll risk drowning in killer surf, climb rockfaces,
get shot at by Vietnamese patrol boats, anything, for that last point.
They'll ignore their families, shutting themselves up in small stuffy
rooms for days on end, just for one more contentless 599 exchange.

>Incredible.

Isn't it?

>Wise up, Gary. Hundreds of thousands of amateurs throughout the
>world think CW is fun. They are not being tortured.

Oh, masochists by definition love their pain. They don't recognize
their behavior as an illness. They do have to have a streak of
sadism too, though, to want to impose their hell on others.

>Oh yes, you do understand that DXing and contesting are two very
>different things, right? Your original post seemed somewhat confused
>about that.

They're both compulsive activities done for score. Contests are usually
shorter and with different ways of counting points. DXing is postal card
collecting with a masochistic twist, and a maximum score of 319. It's an
obsessive compulsive behavior.

I'd prefer options, take a code test or take a digital operation test (or
whatever).

>I wonder if we couldn't
>include CW questions on an overall test for a given license class,
>instead of making it a separate test element. Or wouldn't that be in
>conformance with international treaty?

My understanding is that the international treaty specifies neither the
speed nor the method of testing. If the FCC wants to give us a printed
copy of a code sample to translate at our leisure, that's probably within
the letter of the law.

I wish to comment that as a 15 year old (in 1948) I received my call W2ZKK
and joined a ham club in Jamaica NY called The Amateur UHF Club and was
treated very kindly, taken under the wing of several older hams who gave
me pieces of equipment, helped me get set up on 144mh, 220 mh and 420 mh
bands. I am no longer active but still recall the days when i was really
treated wonderful by older hams. I also held office later on.

5848. Ramsey kits not too good?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-30 02:51:05 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseCItuL6.Iv7@netcom.com>
Source record: 272671

Went out and got the Ramsey packet TNC kit (P-IBM), the one that connects to an IBM PC. Coms with Baycom packet program. Built it, and I can get the PC to communicate with this kit, I can even do a CONNECT to myself. But I CANNOT get the damn thing to decode any packets from a radio reciever. I tried 3 different radios (an HTX202, ICu2AT, and IC02AT). Tried many levels of volume. nothing. I can see the LEDs blink and flicker, but no decodes. Tried with the squelch open (so it wouldn't damage the leading part of the recieved packets). nothing. Manual made mention that the modulation control in a Ramsey 2 meter kit has an effect on recieve. So; I tried adjusting the modulation trimmer in the P-IBM kit, to make the transmit audio sound the same level as ones I hear from the outside world. nothing. Been using an external antenna about 50 feet from my kit and PC all this time. Recieved packets sound clean. Only thing I might suspect is the kit's crystal may be at the wrong freq?
Next week, after I fly back to my apartment in Silicon Valley, I can do some tests using my KPC2 tnc.

Anyone get this thing to actually work?

Past experence with Ramsey kits: FM10, didn't work untill I reduced the vo;tage on the IC used to generate the stereo signal. Even then, not all that great performance.

Also had a shortwave converter (converts a 1 MHz block of a SW band to MW) worked, but no image rejection

I don't think I will get anymore Ramsey kits, performance and quality to me isn't good enough. The TNC kit should be designed to work under a wide variation of audio quality, not be excessively fussy.

Hi Corey,
I saw your message about the 732. And i was just wondering
if you had any trouble with it. Ex the power output, its receving
sensibility or anything like that.
Cause my father had alot of trouble with his, while my 732
works fine.
Anyways if you do get an answer on how to make a packet cable
or buying on can you let me know. My father wants to do packet.

Do we really need the data from the cordinaters? If each of us would send in
the repeaters in his own area in a standard format using grid squares for
location should be close enough for this project, it would make a data base
in short order. We could also include other freqauencies of interest and it
would be a pretty neat deal. Just submit a list of grid square you intend to
pass through and it will give you back a list of frequencies in the order
of the grid squares you sent.

Just a thought

mkb@cs.cmu.edu (Mike Blackwell) after my editing writes:
:
: Suppose I write a geographical database with a really whizzy graphical
: front end, searching and planning capabilities, made to run on a
: laptop or PDA. It includes the ARRL repeater directory database. Just
: what I want while travelling,
:
: Feedback is appreciated, before I waste too much time...
:
: Mike Blackwell -- ke3ig -- mkb@cs.cmu.edu

You don't propose any thing different than already exists...in the paper edition. Lets make this a new and real product.

I really don't care where the repeater is located...I want to know the geographic areas that I can reliably communicate either on my handy-scratchy or my 30 watt mobile. Sinse you are offering a graphic interface you could show coverage maps of repeaters overlaid on a good highway map. An interface to gps could enhance your product. How about a descripter file of the type of use , times of local nets and news broadcasts.

Your listing of the 250 repeaters in the San Francisco Bay Area is meaningless if it just reflects what is in the ARRL Directory. Many of the local repeaters are listed as closed but are in fact quite open to the travelling amateur. Some repeaters are low level 25 mile coverage machines that can be quite popular. Other repeaters are high level 150 mile repeaters that have no usage at all. I have seen repeaters go from vary active to next to nothing in a matter of months. In essence we do not have the user base to support 250 repeaters in this area.

When ever I travel I scan the bands for activity and key words so I know that I can add something to the discussion. Maybe you could add the voice recognician feature as well as the active scan feature to your interface.

With out the added features I think your product would only appeal to statistitions and wanabe repeater coordinators...certainly not to any of us that want to find a good QSO on the bands or make an emergency call.

Bid: $RACESBUL.306

TO: ALL ES, CD, AND PUBLIC SAFETY DIRECTORS VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CALIFORNIA
INFO: ALL AMATEUR RADIO OPERATORS
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6SIG@WA6NWE.CA)
2800 MEADOWVIEW RD., SACRAMENTO, CA 95832 916-262-1600
LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.306 RELEASE DATE: December 27th, 1993
SUBJECT: MGT - Observations - Part 2/3
I don't wish to imply that our RACES and other volunteer
government communications programs were not free of this in California
before the State Legislature undertook to turn this around. Following
authorizing legislation the State Office of Emergency Services
initiated a fulltime volunteer communications coordination effort in
1985 that has paid dividends ever since.
Our State cannot tell the counties what do any more than counties
can dictate to cities. Therefore it is important for state government
to maintain a fulltime leadership role to maximize the positive and
productive use of unpaid communications professionals in government
service. It is such commitment to a program that makes ACS, RACES or
similar communications reserve a success --- not disasters.
On the same multi-state RACES program trip I had the opportunity
to talk with and meet several county radio officers. Almost all of
them receive the RACES Bulletins by packet radio, by mail, and/or by
computer disk. They had established successful programs under their
emergency management officials. Some called it RACES. Others called it
the Auxiliary Communications Service, the Sheriff's Communications
Reserve and by other names. All agreed that their programs either
always or finally succeeded for several reasons, as given in the next
Bulletin.

HAPPY NEW YEAR TO ALL!

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races
and can be retrieved using FTP.

gary@ke4zv.atl.ga.us (Gary Coffman) drones on and on and on:

(someone else said)
>>Oh yes, you do understand that DXing and contesting are two very
>>different things, right? Your original post seemed somewhat confused
>>about that.

Gary says:
>They're both compulsive activities done for score. Contests are usually
>shorter and with different ways of counting points. DXing is postal card
>collecting with a masochistic twist, and a maximum score of 319. It's an
>obsessive compulsive behavior.

Gary, old chap - please make a 1994 resolution to grow up. You have made your points that (a) you don't like CW, and (b) you don't like the ARRL. Not once but several hundred times. I'm sure I don't like some of the things that you like doing, but I don't keep posting stuff here saying that they are worthless pursuits. In areas where you seem to know what you are talking about, I will respect your knowledge and advice. But as another poster said, please stick to the things that you do understand.

I have no idea where your number 319 comes from - my "score" is more than that, and I certainly haven't worked every country on the current DXCC list.

This may sound dumb, but it worked for me. When those numbers blazed past,
I snagged the back part as in....."Whew, what was all that going by?"
Well, if three dits at the end......it must be a "7" "a freight train
of stuff just went by!" with one dit at the end...it must be a "9".
The same approach works for the 1-5 except with dahs.

NOTE: The Effective Sunspot Number for 28 DEC 93 was 56.0.
The Full Kp Indices for 28 DEC 93 are: 0o 1- 0+ 0o 1- 1o 2o 2-

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7640 (N09W52) produced
only three C-class flares this period, the largest being a
C9/SF flare at 29/1549UT. This region retained its magnetic
complexity and has begun to show penumbral growth again. New
Region 7646 (S10E69), numbered early in the period, produced a
single C-class flare. Region 7645 (N11E67) was also numbered
this period.

Solar activity forecast: solar activity is expected to be
low to moderate. Region 7640 still has a fair chance of an
occasional M-class flare and an outside chance of an isolated
X-class flare. Regions 7645 and 7646 both have a chance of an
isolated M-class flare.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to active owing to a favorably positioned
coronal hole.

Event probabilities 30 dec-01 jan

Class M 60/60/60
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 30 dec-01 jan

A. Middle Latitudes
Active 25/30/30
Minor Storm 20/30/30
Major-Severe Storm 05/10/10

B. High Latitudes
Active 30/30/30
Minor Storm 25/30/30
Major-Severe Storm 15/15/15

HF propagation conditions were normal over all regions.
Conditions are expected to become degraded on 30 or 31 December
due to coronal hole effects. Poor to very poor propagation
should dominate over the high and polar latitude paths if the
disturbance materializes. Middle latitudes should see mostly
good to occasionally fair propagation, with poorest propagation
occuring over all regions during the night sector periods.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Not possible in either situation ... I am one of those unfortunate that live in an area with CC&R. Luckily, when my house was being built, the electrician for the builder and I installed my G5RV antenna in the attic and crawl space. The phone company laid its cables later ... No way to move either.

Superpressure Balloon Launch

A cooperative group from Utah State University, Logan, Utah, members of the amateur radio community, and Winzen International plan on launching SuperBall 1-94 at approximately 10:00 A.M. MST (17:00 UTC) on January 5, 1994 from the Logan Municipal Airport. The nylon superpressure balloon for this flight is 76 feet in diameter. It was manufactured and donated by Winzen International of San Antonio, Texas. The expected daytime float altitude of this helium filled balloon will be 120,000 ft (36,660 meters), some loss of altitude is expected at night. Theoretically the technology is capable of maintaining a payload at altitude for long periods of time, potentially years.

The initial track of SuperBall will depend on upper air conditions at the time of launch, but is expected to be in the semicircle east from Utah. Possible scenarios might then take it over the Atlantic Ocean or into the polar regions within a few days.

The payload will be limited to a gross weight of 4 kilograms, or 8.8 pounds. It will consist of the following subsystems:

1. An instrument package containing a five channel Magellan GPS receiver, an external air temperature sensor, an internal payload temperature sensor, a battery voltage sensor, and a differential pressure gauge.

2. A 1/2-watt VHF MCW beacon operating on 145.871 MHz with the callsign N7YTK. Every minute it will transmit data from instruments listed above. (This transmitter will also operate through the Russian RS-10 amateur satellite, which has a downlink frequency 29.371 MHz, plus or minus Doppler.)

3. A one-watt CW 15-meter beacon operating on 21.229 MHz with a call sign of WB8ELK. Every five minutes it will transmit data identical to that sent on the 145.871 MHz beacon. (This signal will also be relayed through the Russian RS-12 amateur satellite, which has a downlink frequency of 29.429 MHz, plus or minus Doppler.)

4. An ATV system consisting of a black-and-white CCD camera and associated one-watt transmitter operating on 434.00 MHz in continuous bursts on command.

5. A cutdown package containing a VHF command receiver, DTMF decoder and barometric switch, and

6. Several Lithium battery packs.

Depending on weight availability, two additional beacons are possible:

7. A one-watt VHF AFSK beacon transmitting ASCII data at 1200 baud on 145.968 MHz every two minutes in alteration with the beacon in (2) above, with the call sign of WB8ELK (also operating through the Japanese FO-20 satellite, which has a downlink frequency of 435.832 MHz), and

8. A 60-milliwatt 10-meter CW beacon operating on 28.322 MHz every minute, with a call sign of WB8ELK, transmitting pressure altitude, internal temperature, external temperature and battery voltage. Item (8) will contain either a 9-volt lithium pack that should last a month, or a 9-volt, 150 ma solar panel, lasting indefinitely.

The purpose of the SuperBall 1-94 mission is to certify this superpressure balloon technology for long-duration flight and to test our ability to control and receive data from a high-altitude research balloon for an extended period of time.

Our first plateau of success will be achieved if we operate through a complete sunset/sunrise cycle at a constant pressure altitude. Our second plateau will be a flight lasting a week. Our third plateau will be a complete circumnavigation of the globe. Anything after that is gravy.

The float path of the balloon is very difficult to predict since the polar breakout usually occurs is this time of year frequently resulting in strong north-south currents.

Observers from the Jet Propulsion Laboratory, Martin Marietta and Utah State University's Space Dynamics Laboratory will be present at the launch. These people are potential users of the superpressure balloon for a Martian mission.

An HF net will be conducted by John Luker, WB7QBC, (Internet WB7QBC@uugate.aim.utah.edu) on the day of the launch and subsequent days on 7230 KHz +-QRM. This net will alert interested hams downrange of the balloon's path, and coordinate the collection of telemetry. The Utah Balloon Team would appreciate the forwarding of any telemetry copied to John's address along with pertinent information, including the receiving station's location, UTC date and time, signal report, and receiving equipment. Video tapes of any received ATV transmissions from the balloon would also be appreciated. At this point we only anticipate turning the camera on during the first two days.

Questions can be directed to Bruce Bergen, KI7OM, through Internet at KI7OM@uugate.aim.utah.edu

Fellow hams,

Could one of you please explain the alleged interaction (interference)
between cellular telephones and FM hearing aids for hard-of-hearing
people?

I'll summarize and post back here and the deaf mailing list.

Thx. :-) M

Esther A. Paris (esther@DEMAND.ED.RAY.COM) wrote:
: Can someone kindly explain to me why/how the cell phones are
: causing problems for FM users?

: My husband (a follower of telecom news) couldn't explain to me
: why cell phones interfere with the FM systems for deaf/HoH people.

: He also had this to say:

: (begin fragment from note Esther's husband sent)
: *I don't know what cell phones have to do with FM hearing aid
: *systems. I'll be surprised to hear that they use the same
: *frequencies.
: *
: *Even if there is some kind of interference problem, the situation
: *should start improving over the next several years. The new
: *system for cellular telephony will probably be CDMA (Code Division
: *Multiple Access) and it uses a spread-spectrum communications
: *system. Spread-spectrum should not interfere with any FM based
: *system. Of course, it'll take a while before the old system

>
> --David C. Adams
>

The problem I have with you argument in the case cited above is 1. the people targeted in the sting were those who by deceit concealed their where abouts to the courts. 2. The courts issued legal affidavits ordering these people to be located, and arrested by any authorized law enforcement officer. 3. If the law enforcement officers call upon the residence listed on the court document the people with whom the person named on the warrant will conceal the wanted person presences to avoid capture (read this as aiding/abeting a criminal to escape from justice). 4. No crime was commited by the law enforcement officers operating the sting as they did not force a person by use of physical threat to show up at the sting (the criminals made decision to be greedy, ie: obtain a product either by chance or pick it up in person for personal gain rather than coerion).

If you have a better idea that would locate criminals wanted by warrant, or in act of commiting a crime (ie: fencing stolen property, etc.) by deceit without employing the same methods, I am certain the law enforcement community would be glad to listen. However, if what you are stating is based upon the "Monday Night Quarterback" syndrome then go out and join your local police dept as an Auxiliary Police Officer to see what being a cop is about. I do not agree with what happened in Britian over the scanner users arrests but, however I would rather see a Charles Manson type caught by deceit than have him on the streets atlarge killing people.

Gee, it never fails to amaze me.

"Why doesn't this kit I paid $15.00 for not perform like the
$400.00 thing I should have bought instead?"

Ask a repair shop to show you the innards of a hand held and
then see if there is only 2 ics and a dozen parts in there.

Look inside a KAM or PK-232 and count the parts.

Even the commercially assembled BAYCOM modems by TigerTronics
at least have quality parts, pc boards and were soldered properly.

Ramsey Kits (and others) are for the entertainment value of playing
with something on the bench. They are NOT a substitue/alternative to
paying for a quality item that works properly.

Yeah, I can hear the old farts now, "What about HeathKit?" I bought them
and built them myself. They worked. Some of them worked pretty good. None
of them was a direct replacement for a expensive commercial product.

If you're buying a Ramsey kit to play with, fine. Beats hacking around
inside an expensive radio. If you're buying a kit to substitute for an
expensive radio, you get what you pay for.

Unfortunately no. The treaty language specifies "receive by ear" and
"send by hand" texts in the International Code. There are no speed
requirements though. The US is technically out of compliance already
since we dropped the sending test. And accomodations for deaf or paralyzed
applicants are also out of technical compliance with the treaty language.

>descripter file of the type of use , times of local nets and news broadcasts.

The coverage data could be really hard to obtain. Most repeater trustees
don't have an accurate mapping of their grade A and B coverage zones.
And theoretical calculations are, at best, only a crude approximation.

It should be possible to calibrate the S meter readings of a radio
and log them to a laptop, along with GPS information, in order to
generate real coverage maps. I bet you could sell this to repeater
groups as a product. In fact, since I just got the GPS working in
the truck, and I have an A/D interface board that works on a parallel
port, I think I may give this a try as soon as I get a new laptop.

Of course the data would only map the repeater transmitter coverage,
and that's rarely reciprocal with it's receive coverage. But a fudge
factor for each repeater to allow for different repeater duplexer and
receiver characteristics could fix that.

I think you may be asking a bit much, Bob. :-)

A directory can limit the number of channels we need to scan, but as
you note, activity can change so rapidly that other information will
have to be gleaned by actually listening to the repeater. A listing
of CTCSS frequencies, general interest groups on the machine, availability
of patches, etc would be of interest, but hard to keep up to date. I'd
be delighted just to get some hard coverage data on a map display.

I bought the speech scrambler/descrambler and had to change one part value, add another part, drill two holes in the case and enlarge one hole for the clarifier pot access. I also added a switch. Now, it works. From my experience and from what I've heard, some of Ramsey's kits are real junk.

Forget the grid squares crap. Pretty useless for most people. If I am
VHF dxing then grids are fine, but a repeater directory is most
likley going to be used by traveling hams. The current ARRL directory
in many states is worthless. Take ohio's entrys. They are listed by
county. How in the world is a traveler suppose to know what county
he is in. List by major citys are much more informative.

I see a clear difference between enticing an unknown criminal to turn themselves in for a crime which is proven by the act of showing up someplace (as in the UK incident) and getting evasive known criminals (for which there are warrants) to turn themselves in. What the US cops have been doing is creatively capturing known and wanted criminals who have been evading arrest in such a way that there is less liklihood of someone being shot. I suppose it ticks criminals off, but I am all for it since it reduces the danger to the criminal, the police and the public - and it is effective...

>>I recognize it as a nearly obsolete mode that is primarily still alive
>>for sentimental reasons.
>
I have given this a great deal of thought and have formed the following opinion.

The original purpose of Ham Radio was to provide a cadre of experienced
radio operators to be available in times of local and/or national emergencies.
I can envision times and situations where some crude form of code (morse)
would be the only mode available. For this reason alone code should be a
requirement.

Another purpose was to promote innovation and experimentation. To forever
write off any idea (or mode of operation) is to lose a thread that may
someday lead
to greater things.

Third is enjoyment. I don't know if enjoyement is can really be considered a
purpose but it certaily is a reason. You shouldn't force someone to enjoy a
certain thing simply because you do, however. One against the code requirement.

A fourth reason, though not one you here about very much today, is to preserve
the history of radio. In this morse code most definitely has a place.

There you have it 3 against 4 for code being an important part of ham radio.

I believe important parts should be requirements. I realize that in America
today everything is right given at birth but I believe that no
accomplishment has meaning if it did not require EFFORT. Ham radio has grown
in NUMBERS as a
result of the no code license but how about QUALITY ?

It always amazes me when I hear stories like these. Look guys, you get
what you pay for. Things that work correctly are usually assembled,
tested and guaranteed by the manufacturer. These items, contrary to
popular belief, cost money, and more than just parts cost.....
SO: Stop your whining! or/
Pay full for a real box.....

Mostly, I agree. Morse code is an important part of ham radio, but it isn't *the* most important part of it. That is why I feel the current code tests are obsolete. I support the idea of making it part of the written test. Say, the first ten questions. (Maybe even add more regualtions and theory, too, if you are a supporter of increased theory tests.) Then, it would be as much of a requirement as any of the other modes. Also, not passing all the code questions would not disqualify you automatically like it does now.

The specifics need to be worked out, but I think we have the start of a good plan. Now, we must decide how to do it, and what we want to include. To keep with the ITU treaty, maybe we would need to continue to keep a separate 5wpm (or comparablly slow speed) test, but drop it when the treaty changes. This would keep us from breaking the treaty anymore than we are now (*sending* is also required in the treaty), and cut down on objections.

Anything else we need? I'd be interested in more (civil) input...

>a product either by chance or pick it up in person for personal gain rather
>than coerion).

I disagree. Unless the police actually awarded prizes, they were
commiting mail fraud. As long as they awarded the prizes, I don't
have a problem with them arresting the fugitives. What I have a
problem with is the police committing crimes they would arrest
you or me for in the name of law enforcement.

It's illegal to sell drugs, but police do it. It's illegal to
buy stolen goods, but police do it. It's illegal to speed, but
police do it without the required emergency signals. It's illegal
to serve a warrant for a technical tax violation with concussion
grenades, but the BATF did it. It's illegal to murder a woman standing
in the doorway of her home holding her baby, but the FBI HRT did it.

We hire police to uphold the law, not break it. But many police
use all manner of excuses to justify being above the law. Saying
the ends justify the means just doesn't wash any more than "only
following orders" is a legitimate defense for atrocity. Failure
to obey the law makes the police just another armed gang. That
they're nominally "our" gang shouldn't make any difference.

Does anyone know much about the above rig. A local ham has one for $150.
Physically it's in great shape but I don't kow how good a radio it is.
It appears to cover 432.0 to 432.5 and 435.0 to 435.5 from examing the
dial. Is it useable for satellite and dometic work? Does it drift much?

>The original purpose of Ham Radio was to provide a cadre of experienced
>radio operators to be available in times of local and/or national emergencies.
>I can envision times and situations where some crude form of code (morse)
>would be the only mode available. For this reason alone code should be a
>requirement.

I can envision times when being able to do open heart surgery might be
vital too, but the AMA doesn't require every doctor to pass a practical
test in heart surgery. In any *plausible* local emergency, FM voice will
be the primary respondent, as it has been for quite some time now. Short
of nuclear war, there's unlikely to be a *national* emergency requiring
amateur aid. Check your supplies down in the fallout shelter. :-)

>Another purpose was to promote innovation and experimentation. To forever
>write off any idea (or mode of operation) is to lose a thread that may
>someday lead to greater things.

Morse has had 146 years to be innovative. By that argument, we should
require auto manufacturers to put buggy whip holders on all their cars.
You never know when it might be innovative to hitch a pair of mules to
the old heap. :-)

Note, I'm not saying Morse is worthless. It makes a fine repeater IDer,
and knowing Morse can be *convienent* in that you don't have to write
down the dits and dahs and look them up in a chart to see who that odd
signal you just heard belongs to. But it's unlikely that Morse itself
will lead to further innovation.

>Third is enjoyment. I don't know if enjoyement is can really be considered a
>purpose but it certaily is a reason. You shouldn't force someone to enjoy a
>certain thing simply because you do, however. One against the code requirement.

Yep. Nothing wrong with enjoyment, but it's not a valid reason for a
requirement.

>A fourth reason, though not one you here about very much today, is to preserve
>the history of radio. In this morse code most definitely has a place.

Historic preservation is not a basis or purpose of the amateur service.
The Army doesn't require it's infantrymen to qualify with the Brown Bess
before being issued M16s just because the old musket has historic ties
to the military.

>There you have it 3 against 4 for code being an important part of ham radio.

Looks like 4 to zip against it being a requirement to me.

>I believe important parts should be requirements. I realize that in America
>today everything is right given at birth but I believe that no
>accomplishment has meaning if it did not require EFFORT. Ham radio has grown
>in NUMBERS as a
>result of the no code license but how about QUALITY ?

Well an amateur license is a permit to enter a lifelong LEARNING process.
We don't expect you to translate the Latin Bible into the vulgate before
allowing you into the language lab. But we do expect you to know enough
not to strangle yourself with the headset cord. We don't expect you to
have three Nobel Prizes in astrophysics before we let you look through
a telescope. But we do expect you to know enough not to shine a flashlight
in other people's eyes. Aside from demonstrating you know how to avoid
sticking yourself in the eye with the sharp end of the rubber ducky,
electrocuting yourself or others, or interfering with critical safety
services, entrance into the amateur radio learning environment should be
as open as possible. Tests are otherwise irrelevant. It's hoped that you'll
expend EFFORT all your life in learning new things by *doing* new things
(including learning and working CW if that strikes your fancy). That's the
only relevant test, the one you pass or fail every day of your life. If you
sit on the bottom end of 20 working CW the rest of your life, you've failed
regardless of what government tests you may have passed.

>dedicated packet link they all gave me the NIMBY (Not In My Band ...)
>response. Of course, they took the better part of a year to even
>respond...

It can get ugly can't it? Still, there are recognized bandplans.
Operating casual simplex in the link subband is anti-social even
though it's not illegal. And putting a link in the recognized
simplex operating segment is nothing short of stupid, not to mention
being impolite. I had a battle with a group who had put their two
meter split site link on the *input* frequency of my 440 repeater.
Now that was both anti-social and dumb to put a link in the middle
of a repeater input segment of a band. We don't even want to talk
about crossbanded rigs popping up everywhere without timeout timers,
IDers, or any other sense of legality.

Coordinating bodies have had a hard time figuring out what to do about
packet. It's mainly simplex users, so not their problem, yet it also
needs coordinated nodes and links, so it is their problem. What many
of the traditional coordinating bodies have done is put on their
bandplanning hats and set aside a block of spectrum for packet and
turned over the responsibility for coordinating it to a packet group.
That's worked fairly well so far.

How do I stay away from these things if I don't know where they are?
Look, this hiding of links and such-like strikes me as being just a bit
silly. If I really want to mess with a link, I'm going to figure out
where it is and mess with it.

Most amateurs *want* to cooperate on the band, and will use more
information to help them do so. I'm doing a lot more simplex these days,
especially on 2 meters, and soon on 450, and the band plan listed in the
ARRL repeater directory strikes me as inadequate to help guide me to
open simplex frequencies. I'd rather not interfere with other users,
but with the dearth of available information, I probably will without
meaning to.

Let's recognize that the spectrum belongs to all users, and be
up-front with each other on how it's being used so we can all better
cooperate. Jammers are gonna jam, whether you publish a frequency or
not. This secrecy stuff on the amateur bands stinks!

This is a very old rig, one of the first, if not the first, solid state 70cm SSB rigs. It came out in time for the early amateur satellites. It's not a great radio by today's standards. It does drift, and the front end isn't that good either. Still, at $150, or less if you can talk him down, it can serve for mode B. I don't think it would be too good for mode J or L, but might be usable with a good preamp.

Hi fellow amateurs and wannabees,
Having followed this discussion concerning morse code for a while I
feel it is time to give my two cents worth.
The Communication Act of 1934 is what all amateur as well as commercial
radio is based off of throughout the world. It is an international treaty. In
it's beginning it stated that the airwaves were free and clear and noone had
a right to restrict anyone from listening to whatever they wanted to. Thomas
Jefferson would have loved it. Being that we needed to regulate who operated
where it was agreed to set aside certain frequencies for certain types/modes/
etc. of operation. Certain assumptions were made about certain frequencies
that have since been proven wrong. Like 40 meters being a band that you could
have amateur radio in one region and shortwave broadcast in another region
and they would not interfere. Anyone try to operate 40 meters after sundown
and try to compete with Radio Moscow, etc.
It is my understanding that the existance of amateur radio is based on
the 1934 treaty. Yes, amateur radio came along before it but any leagle reason
for amateur radio to exist is tied to the Communications Act of 1934.
One of the requirement set up was that any amateur radio operator had
to demonstrait a proficiency in morse code. It is my understanding that it
does not say how fast you have to copy or send. But being an old Army Security
Agency fella I know no one really know morse code as a language till they are
able to copy it above about 10 words/groups per minute. Flame all you want
but having spent a year at Fort Devens, Mass. trying to learn the code with
a couple of thousand other soldiers teaches you something about it.
It is my belief that AT&T, Bell, Commercial Broadcasters, Shortwave
Broadcaster, etc. would like to do everything they could to get the valuable
frequency allocations now assigned to amateur radio. Does anyone want to flame
that one. The less united in a common front the amateur radio community is
the more likely that we will lose spectrum alocation to other interest.
Have you noticed now how the Congress of the United States has passed
legislation making it illegle(sp) to monitor cellular phones. How does that
fly in the face of the act of 1934 saying the airwave are free and clear for
anyone who wants to to listen to. You can go on and cite how satilite broadcast
interest try to get legislation passed to restrict people from monitoring their
broadcast without paying for it. I am sure people in this news group can cite
more examples than I can.
The point really is that if you want to change the spectrum alocation
of amateur radio you better come to a mutual concensis and not polarize your-
selves into procode/nocode groups because the commercial interest have the
money to exploit your devision to their advantage. How many times have we
heard(sp) it said that there probably won't be any amateur radio by the year ....
As for me, I really don't operate morse code. I like contesting, DXing,
ragchewing with DX stations, and a few other things. I think 2 meters is mostly
a bunch of people telling eachother hi/the weather is such and such/bye. But...

that is what they like and I don't have to listen to it if I don't want to. I can change the frequency. I might be inclined to say morse code gets too much spectrum allocation and voice or digital modes(Pactor/RTTY/etc.) doesn't.
But I would rather the amateur radio community settle there problems within their own community than make such a big deal that the F.C.C. or even Congress gets in and decides for them. Has anyone seen the Federal Government do anything right where money interest were concerned? I haven't.
If you like to operate CW, great. Anyone who thinks you must be some kind of defect had better take a look in the mirror. Same can be said for the other modes of operation. I really find it incredible that normally intelligent hams would say someone is S & M for wanting to operate morse code. Really, get a life! Do you really believe that or are you just trying to be a jerk?
You know, you hear alot of bad operating practices on the airwaves nowdays. I think it is about time we as amateur radio operators started educating some people as to how to show courtesy and promote amateur radio as it is suppose to be. An organization to provide emergency communication when needed and to promote international good will. Also, to teach people about radio and electronics. Not put someone down because they want to work morse code, or DX, or run traffic, or whatever. I sure do miss the way hams used to talk about their stations back in the 60's. You used to be able to learn alot by just listening. I know, I didn't get my license till 1977 but I listened as far back as 1964 or so.
Well, go ahead and flame away. You got the right. It is called Freedom of Speech. But think a minute about how it would be nice to hear something more positive and constructive concerning how to improve amateur radio. Also, for amateur radio to have a viable future it needs to be able to try new modes and schemes and such.
...For what it is worth, my two cents worth...

Hi,

I have some questions that I think some of you could answer, and I would appreciate any help you can give me.
My wife's sister just married somebody from Norway and they are moving there in January. Obviously, it is quite expensive to talk vi Ma Bell, and so her family asked me to look into the feasiblility of using shortwave to converse. Being an electrical engineer, I am quite fascinated with the idea, however I have no idea how to get started and if it is even workable.

Could someone let me know who feasable this is? I have done some research into the liscensing aspects, so I am more interested in the start-up costs, reliability and such.
Pleas feel free to email me at.

rcormier@eecs.wsu.edu

Thanks

Phptfffffftp!

Their older kits really suck. I hear their newest receivers are much better, but the transmitters are still spur city unless tuned *very* carefully with a spectrum analyzer. And their receive converters, you don't want to know. You'll be happier, and save money, by converting a Micor or GE Mastr.

Solar activity was moderate because of a single,
uncorrelated M1 xray burst at 30/0555UT. Region 7640 (N08W66)
continued to grow but produced only a single C5/1N flare at at
30/1616UT. Region 7645 (N11E54) showed rapid growth this period
and produced five C-class flares, including a C7/SN flare at
30/1713UT. Region 7646 (S10E54) showed good developement as
well but was generally flare quiet.

STD: The M-class flare was correlated with Region 7645, which is a respectably large region with some magnetic complexity, having a delta magnetic configuration. Strong Ca XV emissions were observed on the northwest limb near N15 today.

Solar activity forecast: solar activity is expected to be low to moderate. Regions 7640, 7645 and 7646 all have a good potential for C-class flaring. Regions 7640 and 7645 have the best chance of occasional M-class activity and an outside chance of isolated X-class flaring.

The geomagnetic field has been at quiet levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to active over the next 24 hours then mostly unsettled. A well positioned coronal hole has so far failed to produce an anticipated magnetic disturbance.

Event probabilities 31 dec-02 jan

Class M 65/65/65
Class X 05/05/05
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 31 dec-02 jan

A. Middle Latitudes
Active 25/20/20
Minor Storm 25/10/10
Major-Severe Storm 05/05/01

B. High Latitudes
Active 25/25/20
Minor Storm 25/20/10
Major-Severe Storm 10/10/01

HF propagation conditions have been normal over all regions. Failure of the anticipated coronal-hole disturbance to thus far materialize has resulted in continued good propagation conditions for all but the high and polar latitudes, where fair propagation dominated. If the disturbance arrives over the next 24 hours, poor to occasionally very poor propagation conditions should be observed over the high latitude paths, although the magnitude of the disturbance may not be as strong as was previously expected, particularly for the middle and low latitude regions. If the disturbance fails to arrive, good propagation conditions should persist. There remains a moderately strong risk for SWF activity over sunlit paths. Higher D-region absorption may also be observed over the upper middle and high latitude paths of the northern hemisphere.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
29 Dec: 0743 0749 0754 C1.6 SF 7646 S13E75 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>

Getting the data from the coordinators usually ensures that a: the list
is reasonably up-to-date, (not always, as repeater operators often don't
tell their coordinators all kinds of things) and b: people don't assume
that because they don't hear anything from their location that the
frequency is unoccupied - whether by a link, control system, whatever for
which the pl tones are unpublished, etc.

Are you _sure_ "The Communication Act of 1934" is an international treaty???

I expect it is an act of the US Congress, since I think I have seen references to the ECPA (? - don't listen to cellphones act - a strictly US law) modifying parts of it.

5892. HAM repeaters in TX?

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-31 13:52:34 UTC
From: bx641@cleveland.Freenet.Edu
Message-ID: <2g1ar2$qk1@usenet.INS.CWRU.Edu>
Source record: 272771

This is my first attempt at posting to USENET, so please forgive any newbie anomalies. I am looking for HAM REPEATERS on 2 METERS and 440 Mhz bands in the Kerrville and Baytown, Texas areas. That would be Kerr, Harris, and Chambers counties. I am taking a 10 memory scanner with no search capability, therefore this request.

Please reply by email to the address below, as I have a very difficult time getting on my USENET reading node. Also, please reply only BEFORE JAN 4, 1994, as I will be away from my computer after that.

Thanks for any and all replies,
Lee

email on Internet: fcraigb@ocvaxa.cc.oberlin.edu

5893. Re: RFI into telephones

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-31 13:55:09 UTC
From: jcox@lakes.trenton.sc.us
Message-ID: <muDFFc1w165w@lakes.trenton.sc.us>
Source record: 272599

I had the same problem from a 40m dipole. I used the K-COM filters at the offending phone jacks and cured it. For the jacks with larger boxes, I used the wire-in versions while with the smaller boxes I used the in-line ones with plugs and jacks.

John

5894. TOYOTAS AND MOBILE RIGS

Mail to you and your digests are being refused by your mailer.
I'm surprised you get any incoming mail at all.

I hope someone who CAN get through to you will tell you to fix it.

5896. Looking for information

Newsgroup: rec.radio.amateur.misc
Date: 1993-12-31 16:32:03 UTC
From: jangus@skyld.tele.com
Message-ID: <757355523snx@skyld.tele.com>
Source record: 272689

Doesn't anyone read books any more?
Doesn't anyone go the the library and look for something themselves?
Doesn't anyone look in technical publications for information?

What is it about the internet that seems to breed the following attitude?

"I don't want to expend the effort to
look so can someone else do it for me?"

Along a similar thread, how is it that no one seems to think of the
manufacturers as a source of information?

Are you people really that cheap, lazy or stupid?

Not that the ARRL amateur radio handbook is the be all to end all,
but it is two inches thick for a reason. Likewise, QST is loaded
full of advertisements. (As several others complain about.)

Dialing 411 (In the US) gets you directory assistance. Dialing
1 (area code) 555-1212 gets you directory assistance for any other
area code. Dialing 1 800 555-1212 gets you the free number directory
assistance for those of you too cheap to call someone direct.

Now I know there are a lot of obscure technical aspects to amateur
radio, but geeze people. Get off of your tail ends and look around
a bit before you waste every one elses time.

And before the self appointed guardians of the net jump on me about
the remark of wasting my time, consider this, I don't think there are
any stupid questions. But there sure are a lot of unnecessary ones.

bwilkins@iat.holonet.net (Bob Wilkins n6fri) writes:

>You don't propose any thing different than already exists...in the
>paper edition. Lets make this a new and real product.

Agreed would be very valuable. Could be published as a data-set
importable into various products, or a telnet-able retrieval system, or
even given a mail front-end.

>I really don't care where the repeater is located...

Well I do. Military grid designations (found on USGS maps) would be fine
enough detail. Location helps deduce coverage area...

>I want to know the geographic areas that I can reliably communicate
>either on my handy-scratchy or my 30 watt mobile.

Yes this is even more important, but could be described in ASCII text as
a preliminary step... All of the things you describe are desirable, but
not absolutely necessary to the value of a preliminary or prototype
development.

>With out the added features I think your product would only appeal to
>statistitions and wanabe repeater coordinators...certainly not to any of
>us that want to find a good QSO on the bands or make an emergency call.

Well I think it doesn't have to be full-blown to begin with. For example
a good start could be made by scanning the ARRL book, and then enhancing
the information with additional material reported from users (as opposed
to secret material best kept to the coordinators and owners). I have
some experience designing database records for related purposes if I can be
of assistance. All of the characteristics you mention could be reflected
in the records gradually, as users step up to help fill them in.
Estimates of Repeater usage, coverage descriptions, etc. Note that it is
not necessary that a repeater be used heavily to be a good emergency
connection. It is only necessary that someone be listening most of the
time.

For these reasons, I'd like to see something running in a telnet-able
system where a user can link in and perform searches in various ways.
For example list all repeaters covering a square bounded by a set of
coordinates (Mil grid or lat./long.). Ftp access to the DB by sections
or sorted in verious ways would also be valuable. Some of the
information one would want to keep (usage patterns for example) might
require frequent updates. An online system would be more condusive to
this.

Hi,
Need a review on the MFJ 1214 multimode controller? Will it do
SITOR/AMTOR/WWV give the right software (which I might write)? Is the hardware
there for the software to use? Is it worth the money?

Tks in advance de 9VG Daniel

I am saying EXACTLY that. If you just pick a frequency that appears open, and start using it for simplex, or a remote base, or a crossband repeater, you are very possibly going to get into trouble with coordinated users of that frequency. This is why simplex channels are posted.

There is a BIG PROBLEM in that the 440 band plan lists only ONE simplex frequency. This is STUPID.

As for crossband repeat functions of radios, these make the radio into a REPEATER. Coordination is required to keep from interfering. Just where on the band are you going to land those signals? What if it is in the middle of someone's ATV or high-speed packet? The channel might sound perfectly clear with either of these, since your narrowband receiver may not even hear the wide signal.

If your local frequency coorinator has not set up a full complement of simplex and test channels, then go to the meetings of the coordination council and ask that this be done! As I see you are in New England, I can give you moreinformation on the subject regarding the 440 band, if you are interested.

>you've failed regardless of what government tests you may have passed.
>

You have to do better than that for an analogy. At least on the bottom end of 20 you are improving your code speed, whether it be from 20 to 25 WPM or 40 to 45 WPM at least you are accomplishing something. Something better to have said was that if you sit in the 75 meter band working LSB for the rest of your life you have failed regardless of what government tests you have taken.

Source record: 272690

I'm putting together a radio-related gopher on the Delphi online system, and while I have pointers to two US callbooks (at Buffalo and the Anomaly one in RI), I'm wondering if there are any other, either in the US or more importantly for other countries. If anyone can pass on that info, I'd appreciate it. E-mail to VIDGAMES@DELPHI.COM is recommended because I don't monitor this newsgroup very much and will be out of town for most of the next week.

Thanks in advance for your help...

: >
:
: There is a BIG PROBLEM in that the 440 band plan lists only ONE simplex
: frequency. This is STUPID.

The 440 band plan is REPEATERS ! The simplex area of the UHF band is 431 - 433 MHz surly you can find a simplex channel in the two mhz allocated.

Here in northern California we talk simplex on our repeater Outputs so we don't miss any activity on the repeater. Ok that means 200 simplex channels. If you are not a repeater user then use an Output frequency that is not in use in your area. Same goes for cross-band repeat...operate on unused Output frequencies in UHF. Be prepared to move frequency until you find a clear frequency. Operating on a coordinated input frequency can cause harmful interference to a vary distant repeater.

Coordinated 440 simplex frequencies here in Northern California are:

446.000 Nationwide fm simplex
441.000 Remote Bases and cross-band repeaters
446.500 fm simplex most user groups use ctcss encode decode
441.500 mixed use 1200 bd packet

441.875 coordinated test pair for duplex activities ctcss encode decode

:
: As for crossband repeat functions of radios, these make the radio into a
: REPEATER. Coordination is required to keep from interfering. Just where on
: the band are you going to land those signals? What if it is in the middle
: of someone's ATV or high-speed packet? The channel might sound perfectly
: clear with either of these, since your narrowband receiver may not even
: hear the wide signal.

Most cross-band repeaters do not identify properly so when they cause interference they are extremly hard to track down. So when you are eventually discovered be prepared for flames...

:
: If your local frequency coorinator has not set up a full complement of
: simplex and test channels, then go to the meetings of the coordination

: council and ask that this be done! As I see you are in New England, I can
: give you moreinformation on the subject regarding the 440 band, if you are

>any rectifer diode would do.

>Ray-O-Vac aslo has a toll free info number and if you call when the enginers
>are there, they will transfer you to one.

Just a few comments here. For one, Renewal or any other Alkaline battery is
a poor choice of power for amateur radio equiptment due to their level of
current use. Alkaline batteries lose out to high capacity NiCd batteries (for
AA size) at about 300ma of current draw. Almost any transmitter fits into
this category. TNC's and other small devices may be able to make use of Alkaline
batteries, but a transmitter or a receiver (with a speaker) will easily draw
more power than that.

If you really want to spend a lot of money, just buy some NiMh batteries. They
cost about the same as Renewal and will provide a longer life (charge to charge)
than will Renewal batteries. The last time I priced NiMh AA's, they ran for $6.00
each. I'm sure that you can find them for less than that now.

Regarding the use of a diode to protect a cell from reverse charge, you would need
a perfect diode to perform this function. Putting a diode in parallel with a cell
would prevent that cell from being reverse charged more than .6V--which wouldn't
do any good. Putting a diode in line with the batteries will either prevent them
from charging or discharging. I don't see how you can protect them from reverse
charge by putting a diode in series--unless you do so by preventing them from
discharging, also. :)

Cheers,
David

In your area 440 may be solely repeaters. This is NOT true in the New England area. It depends on the local coordination council.

> The simplex area of the UHF band is 431
>- 433 MHz surly you can find a simplex channel in the two mhz allocated.

Oh, this'll win you lots of friends. The frequencies you quote are the SSB/CW area of the band plan. FM in this area is NOT recommended.
